TO CORRESPONDENTS.

✽ We are again compelled to postpone several interesting articles to our next—especially Colonel Evans on the great question of the Practicability of invading India.

We must hear more particularly from Clio before we publish any thing.

W. B. is thanked, but we can do nothing more: the same answer to J. S. A.

To A. B. we have to repeat (what we have often stated in the course of our publication) that the omission he complains of is, as he surmises, always to be found in our Weekly List of New Books; and that were we to do what he requests, it would cost us many hundred pounds a-year in stamp duties.

GOVERNESS. A Lady who has had some Years' experience in Tullion, wishes for a Situation in a private Family. She would undertake to teach French, Geography, Writing, Arithmetic, and Music, for the first two Years, without the assistance of Masters. The Advertiser has no objection to take the charge of little Boys.

Letters, post-paid, addressed to E. T., at Mr. Drake's, Law Bookeller and Stationer, Birmingham.

MUSIC.

Dedicated, with permission, to His Most Gracious Majesty, A COLLECTION OF METRICAL VER-
SIONS from the PSALMS, arranged and harmonised
By Mr. MACDONALD HARRIS.

For an account of this Musical Work, see the *Literary Gazette* of Oct. 31st.

Sold by Rivingtons, Bookellers; and at Cranser's Music Warehouse, Regent Street.

The 2d edition, price 1s.

The Press Part of this religious Work, by a Member of the Established Church, is at present out of print; but a new edition is in the press.

BOOKS PUBLISHED THIS DAY.

Swan River.
In royal 8vo. with 34 Plates, price 10s. 6d.

THE BOTANICAL MISCELLANY,

No. II.

By W. I. HOOKER, LL.D. F.R.S. and L.S. &c. &c.
And Lecturer of Botany in the University of Glasgow.
In the present number will be found an account of the country in the neighbourhood of the Swan River, from the pen of the naturalist who accompanied the expedition on its voyage to the spot.

John Murray, Albemarle Street.

Post 8vo. 3s. 6d.

FOREST SCENES AND INCIDENTS in
the WILDS of NORTH AMERICA.

By GEORGE HEAD, Esq.

"The author's buoyancy of spirits, his perpetual activity, and never-failing resources, in his hut residence in the forest, during the severity of a Canadian winter, form an interesting feature of the volume."—*New Monthly Magazine*.

"In the company of Mr. Head we have skated on Lake Simcoe, and glided down the rapids of the St. Lawrence, with the same sense of reality and buoyant spirit with which we lately glided over the Pamper with his shrewd and indefatigable brother, Captain Head."

"The work before us, a very sensible and entertaining, yet wholly unpretending production."—*United Service Journal*.

8vo. 12s.

JOURNAL of a PASSAGE from the
PACIFIC to the ATLANTIC, crossing the Andes in the
Northern Provinces of Peru, and descending the River Marañon,
or Amazon.

By HENRY LISTER MAW, Lieut. R.N.

John Murray, Albemarle Street.

Just published, in 1 vol. the 2d edition of

THE SPEAKING FRENCH
GRAMMAR.

By J. V. DOUVILLE,
Professor of the French Language, 1, Soho Square,
and 9, Lawrence Lane, Chesham, London.

This work is divided into six explanatory lessons, with colloquial essays, particularly calculated to render the speaking of French easy to English persons.

"We have no hesitation in pronouncing this work to be the most complete thing of the kind."—*Morning Post*.

The Key to the Essays is published.

N.B. M. Douville has evening classes, and gives also private lessons at home and abroad.

2d edition, post 8vo. 3s. 6d.

NARRATIVE of a JOURNEY from
CALCUTTA to EUROPE, by way of EGYPT, in the
Years 1847 and 1848.

By Mrs. CHARLES LUSHINGTON.

"We have no hesitation in recommending Mrs. Lushington's Journal to our readers as a pleasing and interesting little volume. The shape in which it has been brought out, combining cheapness with elegance, is also worthy of approbation."—*Oriental Herald*.

John Murray, Albemarle Street.

New Annual for Youth.

Just published, by R. Ackermann and Co. Strand, neatly done up in a Case, price 6s.

ACKERMANN'S JUVENILE FORGET-
ME-NOT; a Christmas, New-Year's, and Birthday
Present for 1850, containing nearly Three Hundred Pages, Nine
Engravings on Steel by eminent Artists, and an Inscription
Page.

"This work is entitled to the warmest commendation, both in regard to its external appearance and embellishments, and the character of the contributions."—*Weekly Free Press*.

"We recommend it to the notice of all who wish to present an instructive as well as captivating gift to a dutiful child."—*Weekly Dispatch*.

"The most elegant of all the juvenile Annuals. The stories and poetry, too, are good, and well adapted for children, which is the great thing."—*Edinburgh Literary Journal*.

"Another work for youth having usurped the title of 'Forget-Me-Not,' Purchasers are requested to be particular in ordering 'Ackermann's Juvenile Forget-Me-Not.'"

Important Works lately published by E. Lloyd and Co.

Harley Street.

LETTERS of PHILIP, SECOND EARL
of CHESTERFIELD, to several celebrated Individuals
of the time of Charles II., William III., and Queen Anne, with
some of their Replies, from the MS. in his own Handwriting, in
the possession of the late Sir James Pultney, Bart. 8vo. 14s.

"As we shall take more occasions than one to call the public attention to this extremely curious volume, throwing such additional light on the manners of a remarkable period, we need only in the first instance briefly characterize it. The MS. was found in Bath House, 1690-10, and the Letters are the autograph of the writer; but they bear so real an internal evidence of authenticity, that no adjunct proof in their favour was requisite. It is a most interesting volume."—*Literary Gazette*.

2. The Principal Events in the History of
Ireland, in the form of Stories. Dedicated to the Hon. Augusta
and Frederic Ponsonby. 18mo. neatly half-bound, 3s. 6d.

"This pretty little volume seems intended to match Mr. Croker's pleasing Stories from the History of England; and we can hardly award it higher praise than that it is justly entitled to a place on the juvenile library shelf, along with the publication we have mentioned, the Tales of a Grandfather, and other favourites. It is evidently the production of an accomplished mind, and has the rare merit, treating of Ireland, of being moderate and unprejudiced."—*Literary Gazette*.

3. Eccelino da Romano, surnamed the Ty-
rant of Padua; a Poem, in Twelve Books. By Viscount Dillon.
8vo. 15s.

4. Conversations on Miniature Painting, by
Miss Emma E. Kendrick; a Work designed to instruct the
young Artist, professional or otherwise, in the Knowledge and
attainment of this valuable art. Post 8vo. nearly ready.

"A work of the most ingenious description, by Miss Emma Kendrick, the highly talented and eminent miniature painter, is in the press, which promises to render this invaluable art much more familiar than it at present is. The object of Miss Kendrick is, in the form of dialogues between herself and pupils, to convey, in a didactic style, the whole of the art, the whole nature and principle of the art, serving at once to simplify and elucidate the great art and study of miniature painting."

"Miss Kendrick has been induced to this at the earnest entreaties of her pupils, and we perceive she is patronised by several of the leading members of the Nobility of whom her pupils chiefly consist; no fashionable has this study become in the highest circles."—*Wide Morning Post*, Nov. 10th.

Just published by Effingham Wilson, Royal Exchange, London,
WILSON'S NEW STRANGER'S
GUIDE through LONDON and its ENVIRONS for
1850; or, a Portable Itinerary, containing every Species of Infor-
mation, a Colourable Map, and many useful Tables. Price 2s. 6d.

The same Work is to be had in French, price 2s. 6d.

Composition and Punctuation familiarly ex-
plained, for those who have neglected the Study of Grammar.
By JAMES BRENAN. 18mo. 3s. 6d. boards.

A New Guide and Companion to the Bil-
l-table; exhibiting, in an intelligible and comprehensive
Manner, by means of a series of Diagrams, the method of con-
structing the most difficult Streets; Rules, Regulations, &c. The
whole newly and completely arranged, by an Amateur. With
Plates, price 2s. 6d.

Royal 8vo. with Plates, 15s. boards.

LECTURES on ANATOMY, interspersed
with Practical Remarks.

By BRANSBY B. COOPER, F.R.S.
Surgeon of Guy's Hospital, and Lecturer on Anatomy, &c. &c.

Sold by the Medical Booksellers.

Practice of Cookery.—Second Edition.

THE PRACTICE of COOKERY, adapted
to the Business of every-day Life.

By Mrs. DALGAIRES.
Every Receipt in this work has been carefully revised for this
edition, in order that advantage might be taken of the numerous
valuable criticisms by which it has been honoured in every part
of the empire.

A considerable number of new receipts have also been added;
but only such as the Author has had adequate means of ascer-
taining to be valuable—a principle which has been scrupulously
adhered to throughout the volume.—*Author's Preface to the
Second Edition.*

Printed for Cadell and Co. Edinburgh; Simpkin and Marshall,
London; and sold by all Booksellers.

"We consider we have reason strongly to recommend Mrs.
Dalgaire's as an economical, useful, and practical system of
cookery, adapted to the wants of all families, from the tradesman
to the country gentleman. It is not a servant's book, nor does
it pretend to be; and though we shall not put away Randall and
Kitchiner for Mrs. Dalgaire, she is far more copious than they
are, far more various, and to us more novel."—*Spectator*.

Nearly ready, and to be had as above,
Tales of a Grandfather, Third Series. By
Sir Walter Scott, Bart.

In 8vo. price 3s. 6d.

INTRODUCTORY EXERCISES on the
GREEK LANGUAGE, for the Use of Junior Students
at Schools and Universities.

By GEORGE DUNBAR, A.M. F.R.S.E.
Professor of Greek in the University of Edinburgh.

London; and Stirling and Kenny, Edinburgh.

Of whom may be had,

A Key to the Greek Exercises, by George
Dunbar, A.M. And
Greek Grammar, for the Use of Schools.

Translated from the German of V. Christian Fred. Reut. To
which is now added, an Appendix on Greek Verification. In
8vo. price 18s.

In 8mo. price 7s.

A GLANCE at some of the BEAUTIES
and SUBLIMITIES of SWITZERLAND, with EN-
GRAVINGS on the various Objects of Interest presented during
a Tour through its Picturesque Scenery.

By JOHN MURRAY, F.R.S. F.L.S. &c. &c.

"This is a delightful little volume, which none will regret
having purchased."—*Magazine of Natural History*.

"A Glance at Switzerland" is really deserving the notice of
a traveller in that country. We can recommend it as containing
a great deal of information and pleasant description."—*Monthly
Review*, July 1839.

"Mr. Murray is entitled to take an honourable place among
the scientific travellers of the day."—*Edinburgh Library Journal*,
April 25.

"This is the work of a gentleman who has evidently travelled
with a scientific and intelligent eye."—*Court Journal*, May 2.
Printed for Longman, East, Oxen, Bouver, and Green.

Of whom may be had, by the same Author,
A Manual of Experiments, illustrative of
Chemical Science. In 18mo. price 4s. boards.

Experimental Researches on the Light and
Luminous Matter of the Glow-worm, &c. 4s. boards.

In 3 vols. post 8vo. price 11s. 10s. with a full-length Portrait of the
Author, engraved by Hall, after a Drawing by Wageman, the
2d edition of

MEMOIRS of the EXTRAORDINARY
MILITARY CAREER of JOHN SHIPP, late a
Lieutenant in his Majesty's 87th Regiment.

Written by HIMSELF.
This work, the first edition of which, consisting of 1000 copies,
has been sold in a few months, has been carefully re-edited, con-
siderably enlarged and improved, and much novel and important
matter has been substituted for what was less interesting. The
attention of military officers is particularly requested to the obser-
vations on the important subject of General Disarmament in the
British Army, and the Practical Hints to young Subalterns (now
first printed), which occupy several chapters of the work.

For literary notices of the first edition, see the *Adelphi Journal*,
the *Oriental Herald*, the *United Service Journal*, and the *Monthly
Review* for Feb. 1839, the *Literary Gazette*, the *Weekly Review*,
the *Spectator*, *Newspaper*, &c. &c.

PRICE 8d.

REVIEW OF NEW BOOKS.

Historical Account of Discoveries in North America; including the United States, Canada, the Shores of the Polar Sea, and the Voyages in Search of a North-West Voyage: with Observations on Emigration. By Hugh Murray, Esq., F.R.S.E., author of "Historical Account of Discoveries and Travels in Africa, Asia," &c. 2 vols. 8vo.

CONSTRUCTED on a similar plan, and embracing an equally varied range of topics, this compendium is likely to sustain and augment the reputation which Mr. Murray has acquired by his two former works on Africa and Asia. The subject possesses an interest of a very high nature, and peculiarly its own;—an interest extending retrospectively to that age of enterprise in which the western hemisphere was discovered, and prospectively to those times, probably not far distant, when the American people shall have stretched from the Atlantic to the Pacific, and prodigiously changed the relations that have so long subsisted between Europe and Asia. For an undertaking like the present a great abundance of materials existed—but they lay scattered in a variety of separate works, many of them costly, some already scarce; and in compressing them into a moderate compass, under a convenient arrangement, Mr. Murray has conferred a substantial favour not only on the literary world, but on the public generally. Either by good fortune, or by felicity of tact, he has moulded his work into that popular form which combines, in due proportions, amusement with instruction: he has interspersed with his historical details various traits of individual adventure, and sketches of national character and manners: so that his book, notwithstanding many marks of negligence in the style, which he must by all means remove in another edition, combines the utility of a scientific treatise with the entertainment afforded by a collection of voyages and travels.

The plan of the work is well adapted for effecting this union of the useful with the amusing. After a preliminary discussion on the supposed early discoveries of America, and on the origin of the inhabitants of that continent, Mr. Murray details the discovery and colonisation of North America, the Spanish and French expeditions to Florida, the discovery and settlement of Virginia, of New England, and of the secondary colonies of Great Britain, together with the settlement of the French in Canada and Louisiana. Then follows a portraiture of the American Indians, which perhaps may startle those who have formed their notions of these aborigines chiefly from the reveries of the French philosophers, or from the ideal picture of an Indian chief in Mr. Campbell's interesting poem of *Gertrude*. In his account of America, before and after the revolution, Mr. Murray evinces equal prudence and good feeling, and avoids the discussion of questions which, without any salutary result, would revive animosities happily extinct. His

succinct history of the settlement of the western territories, and of the discoveries beyond the Mississippi, will be read with interest even by those who still freshly remember the narratives and journals of which it forms an able recapitulation. An abstract of the early voyages for the discovery of a north-west passage, is followed by a relation of the more recent voyages of Captains Ross and Parry, and of the arctic land expeditions. The third book contains a synopsis of works relating to the United States of America—exhibits their political system—depicts their moral and social condition—and presents a general view of their industry and commerce. The concluding chapters are occupied with the present state of Canada and the other countries of British America, and with some statements relative to the important subject of emigration, which cannot fail to be read with very great attention. A list of authorities subjoined, forms a very proper and useful accompaniment to the work.

The historical and descriptive parts, as we have already observed, mutually relieve each other. We are tempted to select, from one of the introductory chapters, part of Mr. Murray's conclusion on that interesting question,—“When and by whom the western hemisphere was peopled?”

“The peopling of America is no longer an object of the slightest mystery or difficulty. The north-west limit of this continent approaches so close to Asia, that the two are almost within view of each other, and small boats can pass between them. Even farther south, at Kamtschatka, where the distance may be six or seven hundred miles, the Fox and Aleutian Islands form so continuous a chain, that the passage might be effected with the greatest facility. The Tschutchi, who inhabit the north-eastern extremity of Asia, are in the regular habit of passing from one continent to the other. These tribes, then, from the earliest ages had discovered that mysterious world which was hidden from the wisest nations of antiquity, and appeared so wonderful to modern Europeans. It was not a discovery in their eyes. They knew not that this was Asia and that was America; they knew not that they were on one of the great boundaries of earth. They knew only that one frozen and dreary shore was opposite to another equally frozen and dreary. However, it is manifest, that by this route any amount of people might have passed over into America. The form of the Americans approaching to that of the nations in the north-east of Asia, the comparatively well-peopled state of its north-western districts, and the constant tradition of the Mexicans, that the Azteks and the Toultecs, who early occupied their territory, came from the north-west;—all agree with the indications afforded by the natural structure of the continent. But it may be said, that although people by this channel undoubtedly passed over from the old world to America, this does not exclude other colonies from finding their way across the Atlantic or the Pacific. Supposing

it too much to have crossed the entire breadth at once, they may have taken their departure from some of the numerous islands with which both oceans, and especially the Pacific, are interspersed: all peopled at their first discovery. If these islands were peopled from the distant continents of Europe and Asia, why not America from them? We are to observe, however, that the South Sea groups, however distant some of them may be from any main-land, range in a continuous line with each other; so that the extremity of one group is seldom very far distant from the extremity of another. It was therefore no very mighty achievement for men possessing, on a small scale, the maritime enterprise natural to an insular territory, to effect a passage successively to each. But America is every where, unless on the north, begirt with an unbroken breadth of at least a thousand miles of ocean, without a single insular point which could form a step in the progress of the navigator. Combining this circumstance with the observations already made on these immense voyages, whether voluntary or compulsory, the probability appears very great that no such passage ever took place. If any detached individuals ever were wafted across the ocean, I am persuaded that they would not possess or retain any of the civilisation of the old world,—and that they did not contribute in any shape to that measure or form of improvement which was attained in Mexico or Peru. It is vain to urge that the Mexicans expressed their ideas, and even their history, by paintings, which bore some resemblance to the paintings and hieroglyphics of Egypt. Man, as soon as he emerges from total barbarism, must feel the desire of expressing his ideas by some mode more durable than words; and this mode, in the first instance, must inevitably be painting. He must begin with a picture of the object which he wishes to record. This picture, generalised and refined, passes gradually into the symbol, the hieroglyphic, the expressive mark, and, finally, into the alphabetic character. In these latter stages, although they depend upon the general principles of human nature, there is much in point of form that is arbitrary, and a coincidence in regard to which might indicate very clearly an ancient connexion. But mere paintings, as they must bear a certain resemblance, so their common use seems to indicate nothing more than the action of the most elementary principles in the human mind. The forms of architecture also, as they are dictated by convenience or the sense of duty, may often exhibit some casual coincidences. I am convinced that all the civilisation which existed in America arose, as it flourished, in the delightful table-lands of Mexico, Quito, Cusco, and Cundinamarca. It is in these happy regions, where men multiply, and the means of subsistence are abundant, that the refined arts first become an object of cultivation. This conclusion is not at all shaken by the fact quoted by Humboldt, that the Toultec conquerors, who came from the now barbarous re-

gions in the north-west, were the framers of the most remarkable of the Mexican monuments. Generally, conquerors adopt the arts and improvements of the vanquished nation; and their active and ambitious character impels them to call these into action on a greater scale than the usually supine dynasty which they have overthrown. The grandest monuments of Hindostan and China were erected by monarchs of Tartar origin; but the art which constructed them was Hindoo or Chinese."

Our space will not admit the entire outline which Mr. Murray has given of the political system of the American republic; but we must insert one of its most important passages.

"The general government consists of three members, the Representative Body, the Senate, and the President. The House of Representatives forms the basis of the legislature, and is an assembly purely democratic. The members are elected by the whole body of the people, with the exclusion of Indians and Negroes. The members sit for two years, when a fresh election takes place. The proportion is nearly as one out of 40,000, which produces at present 118 members. The state-legislatures have no share in the elections, though each sends a member entitled to sit and speak, but not to vote. The elections, as may be supposed, among a people eagerly interested in political concerns, and not endowed with the meekest and most softened temper, are carried on with considerable asperity. Even Mrs. Wright, though disposed to view America in a favourable light, was shocked at the virulence displayed on these occasions. Every species of vituperation is lavished on the hostile candidate; pasquinades are put up, the streets resound with flaming orations, the newspapers are filled with embittered paragraphs, the subject engrosses every company. Mr. Cooper observes, that instances of proceeding to personal combat were not observed by him, and in his opinion are not numerous; but they are not without precedent. When, however, the choice is made, the storm is hushed, and affairs go on in their usual train till another similar period arrives. It is meantime remarked, that the multitude do not usually select representatives similar to themselves, but grave and respectable men of talent and experience. The aspect of this august body, which sways the destinies of so great a portion of the earth, has not inspired much reverence into European spectators. The hall in which they meet, though it possesses, in Mr. Cooper's eyes, a simple grandeur, is viewed by most others as humble and even shabby. The members lounge about, look out at the window, talk to each other, write and fold letters, and bestow, unless in special cases, scarcely any attention on the orators by whom the floor is occupied. It is indeed on all hands admitted, that their harangues are spun out to a length which is perfectly unreasonable and intolerable. It is not at all rare for a speaker to keep possession of the floor for three successive days; and the number who can hold on for two or three hours is lamentably great. These lengthy effusions, as may be expected, by no means adhere closely to the subject, but run out into all sorts of extraneous and irrelevant topics. The necessary consequence of these wordy impediments is a great slowness in the progress of public business; and yet this slowness is deemed by Mr. Cooper to be not, perhaps, an unsafe fault in a government, the greatest evils of which have hitherto proceeded from rashness and precipitation. The senate is constituted in a manner entirely different, and without any

direct agency from the body of the people. The legislatures of the different states elect each two members; and thus Delaware, which has only a population of 70,000, elects as many as New York, with eighteen times that amount. Now that the states are twenty-four, the senate of course is composed of forty-eight members. The senators must have attained the age of thirty, and they sit for six years; a third, however, being changed every two years. They form thus, not indeed a body really aristocratic, but one which has somewhat of aristocratic action, whose gravity and stability tend to check those too rapid and violent movements to which a pure democracy is liable. The executive part of the administration remained still to be formed, and for this purpose an entirely new machinery is brought into play. There is created within each state, by arrangements of its own, sometimes by the legislature, sometimes by the whole people, and sometimes by only a part, a body of electors who name the candidate on whom they wish that the choice should fall. This vote is transmitted in a sealed packet to Congress, by whom all the votes are opened in one eventful day, and the office given to him who commands a majority of states. He must possess indeed more than half the entire number, or eleven out of the twenty, otherwise the choice devolves upon Congress. The functions of this officer are more ample than might be expected from the basis upon which the constitution rests. He has the entire command both of the military and naval force, though it is not understood or expected that he should head either in person. He appoints to all civil and military offices, subject to the approbation, that is, to the veto, of two-thirds of the senate, which is not, however, very often interposed. Upon the laws which have passed the two legislative assemblies he does not possess an absolute negative; but he can suspend and arrest the operation of any particular act till it is presented to him again with a majority of two-thirds in its favour; his opposition must then cease. The president is elected for four years, at the end of which period he may be re-elected, and so on indefinitely; so that there might be room for an eminently popular character to slide insensibly into the possession of this high station, and the constitution to become monarchical. It is a subject of boast, that the emoluments of the president are singularly moderate. To the supreme functionary of a nation of twelve millions, an allowance of 25,000 dollars (about £5,400), with a furnished house, certainly deserves that appellation. Mr. Cooper indeed contends, that he may live well, and save a good proportion of it; but we rather incline to concur with Mr. Warden, that it cannot defray the expense of the open table which he is expected to keep. He is understood to give dinners twice a-week to members of Congress, public functionaries, and any eminent strangers who may happen to be at Washington. Once a fortnight, also, the 'White House,' as it is called, is thrown open to citizens, male and female, of every description, with only the tacit understanding of their being tolerably well-dressed. Mr. Cooper mentions among those present on such an occasion, an innkeeper, a petty shopkeeper, and the daughter of a mechanic of Baltimore. It is not even very uncommon for a carman to leave his waggon at the door, and come in to shake hands with the president, when he is well received—though this action is considered not strictly according to *bien-séance*."

The view of the moral and social condition

of the United States, taken, as it appears to have been, with candour and impartiality, from testimonies carefully compared, certainly forms no inviting picture. A republic without aristocracy, without hierarchy, without those gradations of rank, which, while they present one of the strongest incentives to honourable ambition, tend to maintain that order which is essential to the welfare of large communities—presents a level uniformity of aspect not congenial to the habits and feelings of a European. It exhibits few of those varieties of condition and character which constitute the drama of human existence; it is not the state of society in which a Shakespeare could have drawn "each change of many-coloured life." Liberty and equality are solid compensating advantages, undoubtedly; but they cannot be enjoyed without refinement of manners,—and this bond of civilised society seems not as yet to have much force with the Americans. They are too proud and jealous of their freedom to enjoy it in concert; and the license of democracy has created among them almost as many restraints and as many encroachments as could have been imposed or enjoined by the authority of despotism. Thus, in a land where slaves are bought and sold, the punctilios of citizenship permit no man to call his servant a servant; freedom of speech is carried beyond the bounds of good manners; and even property is *made free with*, to a greater extent than is consistent with ordinary notions of right and wrong. In their commercial transactions the Americans have the reputation of being shrewd, keen, and ready to take advantage,—qualities that do not very well comport with liberal and highly honourable dealing. Doubtless, among the affluent classes a more exalted and gentlemanlike spirit prevails; but it is said to be partly maintained by that direct canon in the code of chivalry—duelling—which implies a law of honour absolute and imperative even over the free spirit of democracy. As a nation, the Americans may become mighty; but it is very much to be doubted that they will ever become truly great.

In taking leave of Mr. Murray, we must express our hope of soon meeting him again, with the results of his researches relative to South America; and we anticipate much pleasure in there contemplating the past, present, and prospective state of those rich and golden regions over which Pizarro and Cortés wielded

"The heroic Spaniard's unrelenting sword."

The Comic Annual. By T. Hood, Esq. 12mo. pp. 174. London. Hurst, Chance, and Co. *The Comic Annual* is at least a novelty, and we are really glad of any thing new in this line; for though it would be too bad in the public to undervalue any of these handsome books (seeing, as how, the public being dispersed, takes only one or two in its separate capacity), yet we, having the fulness of them all, and generally pretty well altogether, have become fastidious about their sameness and want of variety. What Mr. Hood has done to diversify this feeling we will not say, because his *Annual* will not (we believe) be published for some days, and the whole of our present purpose is to amuse our readers with a few stray specimens from it of what has fallen in our way. But first, we must lament to state, that the humour of a multitude of wood-cuts defies our critical powers to paint in language. "A clear stage and no favour" is bespoken in the beginning by a stage-coach overturned, and certainly clear enough and without favour, as all the passengers are disappearing in a deep horse-pond, into which they have been thrown,

—and this is a taste of the rest! Then comes the dedication to an individual who, if the old style were in fashion, would well deserve one of the most panegyric epistles, but who will now laugh at their whimsical successor, which we copy:—

“To Sir Francis Freeling, Bart., the great Patron of Letters, foreign, general, and two-penny; distinguished alike by his fostering care of the Bell Letters, and his antiquarian regard for the Dead Letters;—whose increasing efforts to forward the spread of intelligence, as a corresponding member of all societies, (and no man fills his Post better) have singly, doubly, and trebly, endeared him to every class,—this first volume of the Comic Annual, is, with frank permission, gratefully inscribed, by Thomas Hood.”

The preface, in unison, holds these doctrines:—

“In the Christmas holidays—or rather holly days, according to one of the emblems of the season—we naturally look for mirth. Christmas is strictly a Comic Annual, and its specific gaiety is even implied in the specific gravity of its oxen. There is an English proverb of ‘Laugh and grow fat,’—a saying which our graziers interpret—on the authority of some Prize Oxonian—by growing the fattest of fat for the merriest of months. The proverb, however, has another sense, implying a connexion between cackinnation and corpulence in the human body—and truly, having seen gentlemen of twenty stone in their seats, I am ready to allow that a fat man is always a cheerful. Taking the adage in the latter sense, it is my humble hope and aim to contribute towards the laughter and lustiness of my fellow-creatures, by the production of The Comic Annual,—a work not equivocating between mirth and melancholy, but exclusively devoted to the humorous—in plain French, not an ‘Ambigu,’ but an ‘Opéra Comique.’ Christmas, indeed, seems a tide more adapted for rowing in the gig or the jolly, than tugging in the barge or the galley, and accordingly I have built my craft. The kind friends who may patronise the present launch are assured that it will be acknowledged by renewed exertion, and that I seriously intend to come before them next year, with

“A braver bark, and an increasing sail.”

“The materials (he continues) which were in preparation for a third series of Whims and Oddities, have been thrown into the present volume—that work may, therefore, be still considered as going on, though its particular name is not exhibited; but it is a partner in the comic firm. Each future series will, in the same manner, be associated with the whims and oddities of other authors; and it will be my endeavour to feed every succeeding volume with the choicest morsels that can be procured. In short, the work will be pamper’d—like Captain Head. In the meantime, many little defects, incidental to a first attempt, will be observed and pointed out by the judicious critics, to whom, consciously and respectfully, I bow, like Norval, ‘with bended bow and quiver full of errors;’ merely hoping, timidly, that as second thoughts are allowed to be best, they will deal mildly with my first ones. In my illustrations, as usual, preferring wood to copper or steel, I have taken to *box* as the medium for making hits.”

Such are the introductory “helps,” as the Americans call them, to this amusing tome; and in order to fulfil our promise, we shall now, without choice, extract the first of the company—“Number One.”

“It’s very hard! and so it is,
To live in such a row,
And witness this, that every miss
But me has got a beau.
For Love goes calling up and down,
But here he seems to shun:
I’m sure he has been asked enough
To call at Number One!

I’m sick of all the double knocks
That come to Number Four!
At Number Three I often see
A lover at the door;
And one in blue, at Number Two,
Calls daily like a dun,—
It’s very hard they come so near
And not at Number One!

Miss Bell, I hear, has got a dear
Exactly to her mind,
By sitting at the window pane
Without a bit of blind;
But I go in the balcony,
Which she has never done,
Yet arts that thrive at Number Five
Don’t take at Number One!

‘Tis hard with plenty in the street,
And plenty passing by,—
There’s nice young men at Number Ten,
But only rather shy;
And Mrs. Smith across the way
Has got a grown-up son,
But la! he hardly seems to know
There is a Number One!

There’s Mr. Wick at Number Nine,
But he’s intent on pelf,
And though he’s pious, will not love
His neighbour as himself.
At Number Seven there was a sale—
The goods had quite a run!
And here I’ve got my single lot
On hand at Number One!

My mother often sits at work
And talks of progs and stays,
And what a comfort I shall be
In her declining days!
The very maids about the house
Have set me down a nun,
The sweethearts all belong to them
That call at Number One!

Once only, when the flue took fire,
One Friday afternoon,
Young Mr. Long came kindly in,
And told me not to swoon.
Why can’t he come again without
The Phoenix and the Sun?
We cannot always have a flue
On fire at Number One!

I am not old! I am not plain;
Nor awkward in my gait—
I am not crooked like the bride
That went from Number Eight:
I’m sure white satin made her look
As brown as any bun—
But even beauty has no chance
I think at Number One!

At Number Six they say Miss Rose
Has slain a score of hearts,
And Cupid, for her sake, has been
Quite prodigal of darts.
The imp they shew with bended bow—
I wish he had a gun!
But if he had, he’d never deign
To shoot with Number One.

It’s very hard! and so it is,
To live in such a row!
And here’s a ballad-singer come
To aggravate my woe:
O take away your foolish song
And tones enough to stun—
There is ‘nae luck about the house,’
I know at Number One!”

We also take the first prose tale, as another fair example of this Annual.

Drawn for a Soldier.

“I was once—for a few hours only—in the militia. I suspect I was in part answerable for my own mishap. There is a story in Joe Miller of a man, who, being *pressed* to serve his majesty on another element, pleaded his polite breeding, to the gang, as a good ground of exemption; but was told, that the crew being a set of sad unmannerly dogs, a Chesterfield was the very character they wanted. The militiamen acted, I presume, on the same principle. Their customary schedule was forwarded to me, at Brighton, to fill up; and in a moment of incautious hilarity—induced, perhaps, by the absence of all business or employment, except pleasure—I wrote myself down in the descriptive column as ‘*Quite a gentleman.*’ The

consequence followed immediately. A precept, addressed by the High Constable of Westminster to the Low ditto of the parish of St. M***, and indorsed with my name, informed me that it had turned up in that involuntary lottery, the ballot. At sight of the orderly, who thought proper to deliver the document into no other hands than mine, my mother-in-law cried, and my wife fainted on the spot. They had no notion of any distinctions in military service—a soldier was a soldier—and they imagined that, on the very morrow, I might be ordered abroad to a fresh Waterloo. They were unfortunately ignorant of that benevolent provision, which absolved the militia from going out of the kingdom—‘except in case of an invasion.’ In vain I represented that we were ‘locals;’ they had heard of local diseases, and thought there might be wounds of the same description. In vain I explained that we were not troops of the line;—they could see nothing to choose between being shot in a line, or in any other figure. I told them, next, that I was not obliged to ‘serve myself;’—but they answered, ‘twas so much the harder I should be obliged to serve any one else.’ My being sent abroad, they said, would be the death of them; for they had witnessed, at Ramsgate, the embarkation of the Walcheren expedition, and too well remembered ‘the misery of the soldiers’ wives at seeing their husbands in *transports*!’ I told them that, at the very worst, if I should be sent abroad, there was no reason why I should not return again;—but they both declared, they never did, and never would, believe in those ‘Returns of the killed and wounded.’ The discussion was in this stage when it was interrupted by another loud single knock at the door, a report equal in its effects on us to that of the memorable cannon-shot at Brussels; and before we could recover ourselves, a strapping sergeant entered the parlour with a huge bow, or rather rain-bow, of party-coloured ribands in his cap. He came, he said, to offer a substitute for me; but I was prevented from reply by the indignant females asking him in the same breath, ‘Who and what did he think could be a substitute for a son and a husband?’ The poor sergeant looked foolish enough at this turn; but he was still more abashed when the two anxious ladies began to cross-examine him on the length of his services abroad, and the number of his wounds, the campaigns of the militia-man having been confined doubtless to Hounslow, and his bodily marks militant to the three stripes on his sleeve. Parrying these awkward questions, he endeavoured to prevail upon me to see the proposed proxy, a fine young fellow, he assured me, of unusual stature; but I told him it was quite an indifferent point with me whether he was 6-feet-2 or 2-feet-6,—in short, whether he was as tall as the flag, or ‘under the standard.’ The truth is, I reflected that it was a time of profound peace; that a civil war, or an invasion, was very unlikely; and as for an occasional drill, that I could make shift, like Lavater, to right-about-face. Accordingly I declined seeing the substitute, and dismissed the sergeant with a note to the War-Secretary to this purport:—‘That I considered myself *drawn*; and expected therefore to be well *quartered*. That, under the circumstances of the country, it would probably be unnecessary for militiamen ‘to be mustarded;’ but that if his Majesty did ‘*call me out*,’ I hoped I should ‘*give him satisfaction*.’ The females were far from being pleased with this billet. They talked a great deal of moral suicide, wilful murder, and seeking the bubble reputation in the cannon’s mouth; but I shall

ever think that I took the proper course, for, after the lapse of a few hours, two more of the General's red-coats, or General postmen, brought me a large packet sealed with the War-office Seal, and superscribed 'Henry Hardinge,' by which I was officially absolved from serving on horse, or on foot, or on both together, then and thereafter. And why, I know not—unless his Majesty doubted the handsomeness of discharging me in particular, without letting off the rest;—but so it was, that in a short time afterwards there issued a proclamation, by which the services of all militiamen were for the present dispensed with,—and we were left to pursue our several avocations,—of course, all the lighter in our spirits for being disembodied."

Shall we add, as affording a perfect idea of the singular way in which the author views all sorts of subjects?—

"A Letter from a Market Gardener to the Secretary of the Horticultural Society."

"Sir,—The Satiety having Bean pleased to Complement Me before I beg Leaf to lie before Them agin as follow in particulers witch I hop They will luck upon with a Sowth Aspic. Sir—last year I paid my Atentions to a Tater & the Satiety was pleased to be gratified at the Innlargement of my Kidnis. This ear I have turnd my Eyes to Gozberis.—I am happy to Say I have almost sucksidid in Making them too Big for Bottlin. I beg to Present sum of itch kind—Pleas observe a Green Goose is larger in Siz then a Red Goosebry. Sir as to Cherris my atention has Bean cheafly occupid by the Black Arts. Sum of them are as big as Crickit Balls as will be seen I send a Sample tyed on a Wauking-stick. I send lickwise a Potle of stray berries witch I hop will reach. They air so large as to object to lay more nor too in a Bed. Also a Potle of Hobbies and one of my new Pins, of a remarkably sharp flaviour. I hop they will cum to Hand in time to be at your Feet. Respective Black red & White Currency I have growd equely Large, so as one Bunch is not to be Put into a Galley Pot without jamming. My Pitches has not ben Strong, & their is no Show on My Walls of the Plumb line. Damsins will Be moor Plentiffe & their is no Want of common Bullies about Lunnon. Please inform if propper to classify the Slow with the creepers. Concerning Grapes I have bin recommended by mixing Wines with Warter Mellons, the later is improved in its juce—but have douts of the sack. Of the Patgonian Pickleing Coucumber, I hav maid Trial of, and have hops of Growing one up to Markit by sitting one End agin my front dore. On account of its Proggresiveness I propos calling it Pickleus Perriginatus if Aproved of. Sir, about Improving the common Stocks.—Of Haws I have some hops but am disponding about my Hype. I have quite faled in cultu-vating them into Cramberis. I have also attempted to Mull Blackberis, but am satisfied them & the Mulberis is of different Genius. Pleas observe of Apples I have found a Grafft of the common Crab from its Straglin side. ways of use to Hispalliers. I should lick to be infournd weather Scotch Granite is a variety of the Pom Granite & weather as sum say so pore a frute, and Nothing but Stone. Sir,—My Engine Corn has been all eat up by the Burds namely Rocks and Ravines. In like manner I had a full Shew of Pees but was distroyd by the Sparers. Their as bean grate Mischeif dun beside by Entymollogy—in some parts a complet Patch of Blight. Their has bean a grate Deal too of Robin by boys and

men picking and stealing but their has bean so many axidents by Steel Traps I don't like setting on 'em. Sir I partickly wish the Satiety to be called to consider the Case what follows, as I think mite be maid Transaxionable in the next Reports :—

"My Wif had a Tomb Cat that dyd. Being a torture Shell and a Grate faverit, we had Him berrid in the Guardian, and for the sake of enrichment of the Mould I had the carks deposited under the roots of a Gosberry Bush. The Frute being up till then of smooth kind. But the next Seson's Frute after the Cat was berrid, the Gozberis was all hairy—& moor Remarkable the Catpillers of the same bush was All of the same hairy Discription.

"I am Sir Your humble servant
"THOMAS FROST."

We must give some very feeling lines to a lady, though we cannot give her portrait (composed of fans) as the headpiece, nor the round-robin (a redbreast in the shape of a ball) as the tail.

"To Fanny."

'Gay being, born to flutter!—Sale's Glee.'

Is this your faith, then, Fanny?

What, to chat with every dun!

I'm the one, then, but of many,

Not of many but the one!

Last night you smiled on all, ma'am,

That appear'd in scarlet dress;

And your Regimental Ball, ma'am,

Look'd a little like a mess.

I thought that of the sgers

(As the Scotch say) one might do,

And that I, slight Ensign Rogers,

Was the chosen man and true.

But 'blood! your eye was busy

With that ragamuffin mob;—

Colonel Buddell, Colonel Dixey,

And Lieutenant-colonel Cobb.

General Joblin, General Jodkin,

Colonels Kelly, Kelly, with

Majors Sturgeon, Traffic, Bodkin,

And the Quarter-master Smith.

Major Powderum, Major Dowdrum,

Major Chowdrum, Major Bye,

Captain Tawney, Captain Fawney,

Captain Any-one—but I!

Deuce take it! when the regiment

You so praised, I only thought

That you loved it in alidgment;

But I now am better taught!

I went, as loving man goes,

To admire thee in quadrilles;

But, Fan, you dance fandangoes

With just any fop that will!

I went with notes before us,

On the lay of Love to touch;

But with all the corps in chorus—

It is indeed too much!

You once—ere you contracted

For the army—seem'd my own;

But now you laugh with all the staff,

And I may sigh alone!

I know not how it chances,

When my passion ever dares,

But the warmer my advances,

Then the cooler are your airs.

I am, I don't conceal it,

But I am a little hurt;

You're a Fan, and I must feel it,

Fit for nothing but a flirt!

I dreamt thy smiles of beauty

On myself alone did fall!

But alas! 'Tis 'Cos I tute!

It is thus, Fan, thus with all!

You have taken quite a mob in

Of new military flames;—

They would make a fine Round Robin

If I gave you all their names!"

And conclude with a laughable satire on emigration :—

"Squampash Flatts, 9th November, 1837."

"Dear Brother,—Here we are, thank Providence, safe and well, and in the finest country you ever saw. At this moment I have before me the sublime expanse of Squampash Flatts—the majestic Mudiboo winding through the midst—which the magnificent range of the Squab mountains in the distance. But the

prospect is impossible to describe in a letter! I might as well attempt a panorama in a pill-box! We have fixed our settlement on the left bank of the river. In crossing the rapids we lost most of our heavy baggage and all our iron work; but by great good fortune we saved Mrs. Paisley's grand piano and the children's toys. Our infant city consists of three log-huts and one of clay, which, however, on the second day, fell in to the ground landlords. We have now built it up again—and, all things considered, are as comfortable as we could expect,—and have christened our settlement New London, in compliment to the old metropolis. We have one of the log-houses to ourselves—or at least shall have when we have built a new hog-sty. We burnt down the first one in making a bonfire to keep off the wild beasts, and for the present the pigs are in the parlour. As yet our rooms are rather us-fully than elegantly furnished. We have gutted the Grand Upright, and it makes a convenient cupboard; the chairs were obliged to blaze at our bivouacs,—but thank Heaven we have never leisure to sit down, and so do not miss them. My boys are contented, and will be well when they have got over some awkward accidents in lopping and felling. Mrs. P. grumbles a little, but it is her custom to lament most when she is in the midst of comforts. She complains of solitude, and says she could enjoy the very stiffest of stiff visits. The first time we lighted a fire in our new abode, a large serpent came down the chimney, which I looked upon as a good omen. However, as Mrs. P. is not partial to snakes, and the heat is supposed to attract those reptiles, we have dispensed with fires ever since. As for wild beasts, we hear them howling and roaring round the fence every night from dusk till daylight, but we have only been inconvenienced by one lion. The first time he came, in order to get rid of the brute peaceably, we turned out an old ewe, with which he was well satisfied;—but ever since he comes to us as regular as clock-work for his mutton; and if we do not soon contrive to cut his acquaintance, we shall hardly have a sheep in the flock. It would have been easy to shoot him, being well provided with muskets; but Barnaby mistook our remnant of gunpowder for onion seed, and sowed it all in the kitchen garden. We did try to trap him into a pit-fall; but after twice catching Mrs. P. and every one of the children in turn, it was given up. They are now, however, perfectly at ease about the animal, for they never stir out of doors at all; and, to make them quite comfortable, I have blocked up all the windows and barricaded the door. We have lost only one of our number since we came; namely, Diggory, the market-gardener, from Glasgow, who went out one morning to botanise, and never came back. I am much surprised at his absconding, as he had nothing but a spade to go off with. Chippendale, the carpenter, was sent after him, but did not return; and Gregory, the smith, has been out after them these two days. I have just dispatched Mudge, the herdman, to look for all three, and hope he will soon give a good account of them, as they are the most useful men in the whole settlement, and, in fact, indispensable to its existence. The river Mudiboo is deep and rapid, and said to swarm with alligators, though I have heard but of three being seen at one time, and none of those above eighteen feet long; this, however, is immaterial, as we do not use the river fluid, which is thick and dirty, but draw all our water from natural wells and tanks. Poisonous

springs are rather common, but are easily distinguished by containing no fish or living animal. Those, however, which swarm with frogs, toads, newts, efts, &c. are harmless, and may be safely used for culinary purposes. In short, I know of no drawback but one, which, I am sanguine, may be got over hereafter, and do earnestly hope and advise, if things are no better in England than when I left, you, and as many as you can persuade, will sell off all, and come over to this African Paradise. The drawback I speak of is this: although I have never seen any one of the creatures, it is too certain that the mountains are inhabited by a race of monkeys, whose cunning and mischievous talents exceed even the most incredible stories of their tribe. No human art or vigilance seems of avail; we have planned ambuscades, and watched night after night, but no attempt has been made; yet the moment the guard was relaxed, we were stripped without mercy. I am convinced they must have had spies night and day on our motions, yet so secretly and cautiously, that no glimpse of one has yet been seen by any of our people. Our last crop was cut and carried off with the precision of an English harvesting. Our spirit stores—(you will be amazed to hear that these creatures pick locks with the dexterity of London burglars)—have been broken open and ransacked, though half the establishment were on the watch; and the brutes have been off to their mountains, five miles distant, without even the dogs giving an alarm. I could almost persuade myself at times, such are their supernatural knowledge, swiftness, and invisibility, that we have to contend with evil spirits. I long for your advice, to refer to on this subject;

"And am, dear Philip, your loving brother,
AMBROSE MAWE.

"P.S. Since writing the above, you will be concerned to hear the body of poor Digory has been found, horribly mangled by wild beasts. The fate of Chippendale, Gregory, and Mudge, is no longer doubtful. The old lion has brought the lioness, and, the sheep being all gone, they have made a joint attack upon the bullock-house. The Mudiboo has overflowed, and Squampash Flatts are a swamp. I have just discovered that the monkeys are my own rascals, that I brought out from England. We are coming back as fast as we can."

On the Practicability of an Invasion of British India; and on the Commercial and Financial Prospects and Resources of the Empire. By Lieut.-Col. Evans. 8vo. pp. 147. London, 1829. Richardson.

In our review last year of Colonel Evans's Essay "On the Designs of Russia," (see the *Literary Gazette*, Aug. 23, 1828,) we recorded our opinion of the striking manner in which he had handled a subject calculated to produce the liveliest interest and excitement in the public mind; and he now, in his present publication, follows up and enlarges upon that work, in order to demonstrate the feasibility of the movement of a European force on Hindostan, as well as the probability of such an operation.

In fairness to the author, though again professing that we are not prepared to go all his lengths, we may notice, that one important review of his preceding volume seemed to treat as equally chimerical the author's predictions of the success of the Russian arms against the Turks as well as his opinions relative, not only to the probability, but even as to the possibility, of the Czar's making any movement calculated to shake our power in the East. Recent events in eastern Europe have too evidently shewn

the correctness of Col. Evans's foreboding respecting the first, and how greatly one writer erred in treating it in a manner so jocose. In his exulting remarks respecting what he (the opponent of our author's views) calls the "disastrous finale" of the first campaign, he thus concludes: "It is hoped that this disastrous campaign will have taught the young emperor a lesson of moderation, which will counsel him to seek for peace rather than conquest." In place, however, of "seeking for peace" from within the limits of his own territory, the "young emperor" has had the audacity to send his armies to demand it at the gates of Constantinople; and we doubt not but that many will now be more readily inclined to admit than they were at the commencement of the present year, that any apparent moderation evinced by the Czar in the terms granted to the Sultan is more the result of policy, than an exhibition of any deficiency of the means of commanding his standards to wave on the walls of the Seraglio.

In the work now before us, Col. Evans maintains, that one of the first objects of Russia, in the event of a war with Great Britain, will be an attempt towards the subversion of our power and influence in Hindostan; the plan of which, he infers, has been long since drawn out, and the organisation of it already considerably advanced. The line of march of a Russian invading force contemplated by him, is from the ports of Balkan and Mangoushlak on the Caspian, as a base, to Khiva, &c.; or from the Aral, as a base, on Attock, by the valley of the Oxus to Khiva, Boukhara, Balk, and Cabaul, "the climates of which are spoken of in terms of admiration, as delightful, salubrious, and invigorating, by the Russian and English envoys and officers who have lately visited them."

This is indeed staggering at first sight; but the importance of the subject, and the interest of the following quotations, will, we trust, sufficiently warrant their extent.

"Missions were almost simultaneously despatched (by Russia in 1819-20) to Bokhara, to Pekin, to Khiva, the Toorkomauns,—previously to Khokand."

From the Russian Colonel Mouravief, who was employed on the diplomatic mission to Khiva, the author thus quotes:—

"At present, in spite of every obstacle, the external commerce is very advantageous to the Khivians; but it would be quite of another description if the country was subjected to a wise government. These regions would, in that case, arrive at a high degree of splendour, and all the commerce of the East and of India would direct itself to the north-western shores of the Caspian Sea; finally, the valuable products of Asia would thus pass by the way of Russia towards the west. This thought opens a vast field to the imagination! I will return to it in describing the actual state of Khiva. In the present time, with the knowledge which we have of the localities of the country, one might guarantee the success of such an enterprise (that of taking possession of Khiva). A corps of three thousand Russians, commanded by a determined and disinterested chief, would be sufficient to conquer and preserve this country, which would be so advantageous to Russia, by reason of the importance of its commercial relations with Asia. We are now in a condition to profit by the information we have acquired of this country—of the personages who occupy the first posts in the government of Khiva—of the secret disaffection of the Oosbeks to the Khaun Mohamed-Rahim—and of the favourable disposition of the Toorcomans with

regard to us. The attachment of the latter to Khiva only consists in their drawing their provisions from thence. In furnishing them (the Toorcomans) with grain, which it will be much more advantageous for them to derive from us than from Khiva, we shall easily make them embrace our cause. At Khiva even, we can augment our troops by recruiting the three thousand Russian slaves which are now there, and the thirty thousand Persian slaves, who suffer quite as impatiently as the Russians the miseries they at present have to endure. The only thing which appears to present some difficulty in the execution of this enterprise, is the passage of the steppe which surrounds Khiva: but this may be surmounted with great ease. We are now well enough acquainted with the route from the borders of the Caspian to Khiva; and as for provisions, should it be asked where these are to be procured—I answer, at Khiva itself, where they abound. For the means of transport we can make use of the camels of Toorcomans who inhabit the coast of the Caspian Sea, and who will anxiously press forward, no doubt, to second us; we can also procure horses from them that are habituated to the steppes. For the rest, it is enough to remember that as Mahomed Rahim penetrated in 1813 to the shore of the Caspian with twenty thousand cavalry, so we may feel assured of the possibility of arriving at Khiva with a less numerous corps of infantry, by previously making all the arrangements that might be necessary."

And likewise from Colonel Mouravief—"If we possessed Khiva, of which the conquest would not be difficult, the nomades of Central Asia would dread our power, and a commercial route would be established from the Indus and Oxus (or Amou) even into Russia; then would all the treasures of Asia enrich our country, and we should see realised the brilliant project of Peter the Great. Masters of Khiva, many other states would be brought under our dependence:—in a word, Khiva is at this moment an advanced post, which opposes itself to the commerce of Russia with Bokhara and Northern India; under our dependence Khiva would become a safeguard, which would defend this commerce against the attacks of the dispersed people in the steppes of Central Asia. This oasis, situated in the midst of an ocean of sand, would become the point of re-union for all the commerce of Asia, and would shake to the centre of India the enormous commercial superiority of the dominators of the sea."

And again, from Colonel Mouravief—"The Russian infantry, which spreads fear and terror amidst the ranks of Asiatic troops generally, and which even obtains an easy victory over the forces of a civilised state like Persia, certainly would disperse in a moment the Khivians, who are far from possessing the valour of the Persians. The order, the silence, and the calm approach of our columns, covered by some tirailleurs, would repulse bodies of men ten times more numerous than ours, afraid as they are of coming to within range of musket fire, and animated only by despair, which the easterns decorate with the name of valour. The five principal towns are equally enclosed by walls, and regarded by the Khivians as strong places. These earthen edifices, or fortifications, are not provided with a ditch, and can only defend the inhabitants against a small number of cowardly brigands, who happen not to have got at their disposal a ladder. A fort of this sort could not hold out for above a couple of hours against fifty Russian foot sol-

diers. So soon as we should have reduced a few of them, they would no longer dare to hold out even against a handful of men."

Thus it appears that Colonel Baron Mouraviev, in his diplomatic character, represents to his government the advantage and necessity, both in a commercial and military point of view, of their taking possession of Khiva (the first great position to be occupied, according to our author, whose *military* knowledge we of the *Literary* have no vocation to question, in a hostile movement upon Hindostan);—points out the line of march of an invading force;—the facility of its accomplishment in respect to supplies and transport;—the utter inability of the Khivians to offer resistance to the Russians;—and its leading to "shake to the centre of India the enormous commercial superiority of the dominators of the sea."

The Russian Colonel, Baron Meyendorff, who was employed on the diplomatic mission to Bokhara, also says—"This communication (for the caravans) would be perfectly sure, if the Khanat of Khiva were subjected to Russia. Independently of a great commercial advantage, the acquisition of this Khanat would have that of diminishing enslavement, and the frightful commerce in human beings, especially Russian subjects, which the Toorcomans and Khirghis carry on; it would also augment the salutary influence of Russia in Western Asia. It would be (he adds) in skirting these mountains (between the Aral and the Caspian), at a distance of five, ten, or fifteen versts from the Aral Sea, that Russian troops could approach Khiva most easily."

The writer cites the annexed passage from Colonel M'Donald Kinneir, now our representative at the Persian court; from which he contends that that officer agrees with him in suspecting the plans of Russia, and is himself thoroughly convinced of the practicability of invading India.

"In the year 1791 (he states), when it was expected that a rupture would take place between England and Russia, a plan for the invasion of India was presented by the Prince de Nassau to the Empress Catherine II. This project is said to have been drawn up by the celebrated M. D. St. Genie, who proposes, I understand (for I have not seen the plan), that the army should either march down the plain of the Volga and cross the Caspian Sea, or move through Bokhara and Balk to the Indus. Of the many plans suggested for the invasion of Hindostan, that of crossing the Caspian, and sailing up the Oxus, appears to me to be the most easy of execution. The Oxus is navigable till within three or four days' journey of Balk; but previous to the embarkation of the army, boats must be constructed, and depôts of provisions must be formed. This, indeed, is the only manner in which, in my opinion, India can ever be invaded with a prospect of success."

And in another place—"Although the possession (says Colonel Kinneir) of that country (Hindostan) can be but of trifling advantage to a European power which does not command a maritime communication, it might be the object of Russia to deprive us of what it considers to be one of the chief sources of our strength. It is perhaps unnecessary (he continues) to remark that this dissertation was written before the downfall of Napoleon and the eventful changes in Europe, which, by the aggrandisement of Russia, have endangered the safety of our eastern possessions. It cannot, however, (the same writer states) be denied that the Persians would seize with avidity

any proposal of this nature (an invasion of British India). The love of plunder, the example of Nadir Shah, and the idea which they have formed of the wealth and weakness of our eastern possessions, would alike stimulate them to the undertaking. It was my determination, on quitting England, to visit all the countries through which a European army might attempt the invasion of India; and in prosecution of this plan, to explore the north-eastern parts of Persia, and the vast plains which stretch beyond the Oxus towards the confines of the Russian empire. . . . It were doubtless to be wished that we possessed some personal knowledge of the state and resources of so large and populous a kingdom as Bokhara, which, from its situation, must ever be considered as a most important barrier to the encroachments of Russia towards our oriental possessions."

Considering the high character of Colonel M'Donald Kinneir,—the duties in which he has been employed,—and the important situation he now holds at the Persian court,—his opinions, as expressed in the preceding quotations from his work, cannot but be acknowledged as powerful authority on the points discussed.

"As to the necessity of constructing boats on the Oxus, that (as will be seen by the reports of the Russian officers) may not be necessary, at least to any extent. The natives, it appears, employ large boats upon it, and in considerable numbers, capable of carrying as many as six laden camels, and some even so many as fifty horses. In moving up the river towards Bokhara and Balk with merchandise, they track, with horses, in the same manner used in the internal navigation of this country. Corroborative of the foregoing (opinions relative to an invasion of Hindostan) is the following, from the Survey of Eton, originally consul in Turkey, afterwards, for several years, secretary to the British Embassy at Petersburg; subsequently in the employ of the Russian premier and generalissimo, Potemkin:—"What might have been the event of such a war (1791) it is difficult to foresee; much conjecture may be made: I will only mention one circumstance, the naming of which is alarming, however it may be treated as romantic:—the empress had firmly resolved to attempt to send an army through Bokhara to Cashmere, to place the Mogul on the throne of India, and drive the British out of their possessions; and there were then in Russia Frenchmen, who had been sent into these parts by M. de Vergennes, and who offered to conduct the army. When the British fleet was about to sail for the Baltic, to force the empress to make peace, Prince Nassau, who was then in favour with her imperial majesty, presented a plan for sending an army through Bokhara to Cashmere, and thence to Bengal, to drive the English out of India. Little difficulty was foreseen in passing through Bokhara; it was even hoped, seeing the object was to re-establish on the throne of India a prince of their religion, that they would be friendly to the enterprise: however, were they not, little apprehension was entertained of a people so disunited among themselves, and who tremble at the name of Russia. St. Genie pretended that there were passes through the mountains, and that he had people who had been in the country, sent by M. de Vergennes. He presented with his project a map, and a march-route for the army. They counted on being joined in the north of India by the discontented from all parts."

In alluding to Caubul, Eton thus quotes

from an original paper: "The friendship of the Abdalli of Caubul may be of consequence to the English to cultivate, as the most effectual check on those who pass through Bokhara to invade India."

It will be observed, that Eton says little difficulty was foreseen in the march of an army through Bokhara. Respecting the present military character of that country, Colonel Evans writes as follows:—

"The same description of the state of the military art at Khiva will answer for Bokhara, with this difference, that the force may be three times as numerous: but it is even yet less warlike. They are mounted on beautiful horses, and can skirmish, but that is all. Their present king is a harmless bigot, and a pusillanimous devotee. By the walls of brick dried in the sun, which are described to surround their villages and principal towns, it appears that their notions on fortification are precisely on a par with those of the Khivians. 'Bokharian foot soldiers (says Jakovlew) under arms were drawn up on each side—they made a singular appearance, being men of different ages, old and young, dressed in robes of different colours; some had caps, others turbans, or only drawers; some had boots, others none; all held their matchlocks in both hands. They have but two words of command, 'rise,' and 'sit down;' they never pronounce the word 'fire!' because the matchlocks cannot fire, and because the Bucharians have, in fact, no infantry. Before our arrival, the khan had caused all the matchlocks to be collected; they got together 200, and the khan desired all persons to announce themselves who desired to hold a matchlock when the Russian embassy should come to visit him. Thus was formed this terrible Bucharian infantry, through which our procession passed to wait upon the vizier.' Their artillery consists of ten Persian guns, of which only three or four are mounted on carriages. These carriages have three wheels, and cannot be moved but with the greatest difficulty."

Having extended this article to our farthest possible limit, we can only at present add, that Col. Evans cites the Marquess Wellesley, Lord Minto, and Sir John Malcolm, in support of his opinions; and that his extracts from them are both historically curious and politically important.

Court and Camp of Buonaparte. Family Library, Vol. VIII. London, 1829. Murray.

THIS Number of the Family Library consists of a series of sketches of the lives of the persons most closely connected with the family, the civil government, and the military adventures, of Napoleon; varying in fulness of detail according to the writer's notions of their comparative importance, and, of course, the nature and extent of the materials furnished him by works previously published. By any one engaged in reading any history of Buonaparte this little volume will be found useful, in the way of reference and illustration; and we are only surprised that no attempt to supply so obvious a desideratum should have previously been made in this country. The longest, most interesting, and best-written of these biographies, is that of Murat, which extends to about thirty pages: that of Victor is comprised within six pages. We mention this, that the reader may have some notion of what he is to expect from our compiler, who appears to have exerted himself with much diligence in the collecting of facts, and whose brief reflections uniformly indicate a humane and candid spirit. As for his composition, we should say it is that of no very

practised hand—most probably of one who has seen more of *campes* than of *courts*; but he has had the good sense to translate and quote many very curious passages from works to which the ordinary English reader has no access; and as his own connecting narrative is modest and unambitious, we have no doubt his little volume will meet with a very favourable reception.

The author says, in his preface, that some of his statements, which are at variance with those of the Life of Buonaparte in the first Numbers of this miscellany, are grounded on the authority of M. de Bourrienne, "whose very able, interesting, and trustworthy Memoirs have appeared since the publication of that work." If he had waited a little, and examined the new edition of that Life of Napoleon, he would have found ample use therein made of Bourrienne's book, which certainly throws more light than any other on the early part of the emperor's career, and especially on his personal manners and opinions before he thought of sovereign power, and the extraordinary *mélange* of cunning and audacity by which he eventually ascended the throne.

This unpretending appendix to the Life of Napoleon is adorned with really exquisite engravings, on steel, of Murat, Soult, Talleyrand, and Massena; a head of Fouché, very well cut in wood by Mosses; one of Ney, in wood also, and by no means laudable; and, lastly, what was a good notion, a tabular view of the descendants of Carlo Buonaparte and his spouse Letitia, shewing the growth, decline, and present condition of the ex-imperial tree, at a glance. We select a few anecdotes from these pages.

"Cambaceres was a gourmand, and his table would have been daily crowded with guests, had not his disposition been somewhat penurious. Of this last foible there is an anecdote too characteristic to be omitted. He had directed a furniture-broker to bring him a table capacious enough for sixty covers. Accordingly it was brought, and ordered to be laid out in the dining-room. When this was done, he insisted that it was not of the requisite dimensions. His object was to procure by this means some abatement of the price; but the poor tradesman demurred. To settle the question, Cambaceres despatched one of his valets to bring in sixty masons, who were at that moment demolishing some buildings in the Place du Carrousel. The men were surprised at so unexpected a summons: they naturally supposed, however, that the great man wished some improvement to be immediately made in his palace, hastily cleaned themselves, and flew to the spot. When introduced into the dining-room, they were not a little amazed to find the table laid out with sixty covers. 'No doubt,' thought they, 'his highness has received good news from the army, and in the joy of his heart wishes to give us a treat!' This impression was confirmed when they were ordered to take their seats. But what was their amazement when, instead of the table being covered with dainties, Cambaceres, who was standing near them, called out, 'Act as if you were pouring out to drink! Seize your knives and forks! Seem as if you were cutting something on your plates!' The poor hod-men went through these evolutions with such regularity, as to remind us of the barber's brother in the Arabian Nights; but in one respect the parallel is imperfect—the imaginary feast was not succeeded by a substantial one: no sooner was his highness forced to acknowledge that the table was of the requisite capacity, than the tan-

talised guests were unceremoniously dismissed, without the slightest compensation for the time they had lost.

"In 1811, Maret (now Duke of Bassano) succeeded Champagny as minister for foreign affairs. Soon after, Talleyrand observed: 'In all France I know but one greater ass than Maret; that is the Duke of Bassano.' * * *

"A man who had lost his two sons in the Russian campaign was suspected of not being very heartily attached to the existing government: such, indeed, was the fact, but he was prudent enough to speak his mind only in presence of his most intimate friends; before the rest of the world he was mute, thereby baffling the efforts of the numerous hired spies whom Savary had placed over him. As he was one day seated in the garden of the Luxembourg, accompanied by a tried friend, the conversation began with the battle of Leipzig, which had recently taken place. In the sequel neither spared the despot, whose downfall they hoped was near at hand. In the midst of this confidential intercourse, a lovely little boy, apparently in his sixth year, came weeping towards them, crying that he had lost his nurse. They endeavoured to comfort him, telling him not to sob, for his nurse would not fail to seek him. During the quarter of an hour which he remained with them, they continued to converse on the same subject. Then a woman was seen to approach, with a child in her arms: no sooner did the boy perceive her, than he cried, 'there is my nurse!' and hastened to rejoin her. The very next morning both were arrested, and conducted to the Conciergerie. The childless parent was the first interrogated, and his surprise was not little to hear repeated, word for word, a portion of his conversation with his friend. His natural impression was that that friend had betrayed him, but he soon found his mistake. Both were immediately imprisoned, nor were they enlarged before the fall of Napoleon. Children of both sexes were employed in this execrable system of espionage."

"Among the malicious reports of the time (1808), was one which Napoleon was sure to lay hold of as a means of mortifying the man he disliked: it related to a high degree of intimacy said to be subsisting between Madame Talleyrand and Ferdinand of Spain, who was confined in the Castle of Valencay, belonging to the Prince of Benevento. The next time our prince appeared at court, the emperor eagerly taunted him on the subject. All eyes were turned towards him as he calmly replied: 'Well would it be, both for your majesty's glory and mine, if the Spanish princes were never again to be mentioned!' The impossibility of the prince's countenance, even when most agitated within, was truly remarkable. On this subject Murat had a coarse but expressive manner of speaking. 'Kick Talleyrand on the breech,' said his majesty, 'and then look at his countenance: it will not shew the slightest sense of the indignity.'"

The British Naturalist; or, Sketches of the more interesting Productions of Britain and the surrounding Sea, in the Scenes which they inhabit, &c. &c. 12mo. pp. 380. London, 1829. Whittaker, Treacher, and Co.

THOUGH startled by an expression in the title-page, and staggered by a declaration of war against systematic arrangement, as being hostile to study, in the preface to this volume, we must speak cordially in its praise, as presenting very delightful views of natural subjects as they are grouped and classed by Nature herself. The author, evidently a very intelligent and

observant person, takes in turn the mountain, the lake, the river, the sea, the moor, and the brook; and under these heads treats of their various products and inhabitants; and the effect of this method is certainly very pleasing and impressive. The literary matter is ably put together; and the wood-cut illustrations by W. H. Brooke and by Mr. Bonner, "from drawings by Harry Wilson, Esq.," are all that could be wished in such a work. Having thus briefly and truly characterised the *British Naturalist*, and being unable to exhibit one of its entire features as an example of its merits, we must be content with a few almost random extracts, which we trust will suffice to support our very favourable opinion.

On the migration of animals, the author observes:—"From the nature of their powers of motion, the seasonal migrations of quadrupeds are necessarily limited. If they be inhabitants of islands, they cannot pass over the sea; and upon continents, large rivers, mountains, or deserts, limit their range. In Britain, the stag and the roe, which are found only in the uplands in the warm season, find their way to the warm and sheltered plains in the winter; and on more extensive lands some of the quadrupeds take longer journeys; but they are all comparatively limited, and extensive migrations are performed only by those animals that can make their pathways in the sea or the air. The seal, which during summer is found in such numbers on the dreary shores of Greenland, Jan Mayen, and Spitzbergen, finds its way to Iceland in the winter; but its migration is limited, and numbers still remain in the most northern regions that have been visited. The inhabitants of the water have, indeed, less necessity for seasonal changes of abode than those of the land, as the water undergoes less change of temperature, and as some of those sea animals which, like the seal, require to come frequently to the surface to breathe, do not require to remain long above water, or have much of their bodies exposed to the air. The grand inconvenience which they seek to avoid, appears to be the labour of keeping open those breathing holes, without which they could not live under the ice. Or, if there is any other instinct, it may be the desire of escaping their enemies, as the bears and the northern people watch them at their holes, and make them a sure and easy prey. Those who have not thought rightly upon the subject, are apt to say that they could not know of those dangers, and therefore could not seek to avoid them without experience. But that is part of the general error into which we are so apt to fall when we begin the study of nature. We make ourselves the standard of comparison, and think of the animals not only as if they had to deal with men, but as if they actually were men themselves. Whereas, in their natural state they need no teaching; and the danger, or the means of life, and the instinct by which the one is avoided and the other secured, are coexistent. We are in the habit of attributing superior sagacity to animals in certain stages of their being; as we give the 'old fox' credit for greater cunning. That may be, indeed must be, true, as regards the arts of man, because the means to which he resorts for the capture or destruction of animals are not natural; and thus it would be a violation of the law of nature to suppose that they should be met by a natural instinct. In situations which nature produces, the children of nature are never at a loss; but as the contrivances of man are no part of her plans, it would be contrary to the general law to suppose that they should

be instinctively provided against these. That they do learn a little wisdom from experience, is a proof that they are not mere machines; that they are something more than mechanical; that life in the humblest thing that lives, is different in kind from the action of mere matter; and that there runs through the whole of organised being, a philosophy which man, when he thinks of it, must admire, but which he cannot fathom. The animal, or even the plant, is not like an engine, confined to certain movements which it cannot vary, but has a certain range of volition (if we may give it the name), by means of which it can deviate a little from that which would otherwise be its path, if that path contain aught that is dangerous or inconvenient. Thus, if we would come to the living productions of nature with minds fit for learning those lessons which they are so well calculated for imparting, we must equally avoid two extremes, the one of which would lead us to confound organic being with the mere organic clods of the valley, and the other would lead us to confound their instantaneous impulses with deliberation, and measure instinct by the standard of reason. The migrations of birds are more remarkable, and have been more early and more carefully observed; and that birds should have a greater range, is in perfect accordance with the general law of nature. The apparatus with which the majority of birds are furnished for preparing their food for digestion in the stomach, confines that food within a smaller compass than the food of the quadrupeds. With the exception of the birds of prey, which can rend other animals for their subsistence, and are thus capable of living at all seasons of the year, the birds must subsist upon soft substances, as insects and their larvae, or the seeds and green and succulent leaves of plants; while quadrupeds, being furnished with organs of mastication, which, along with the saliva, reduce their food to a sort of pulp before it be swallowed, can subsist upon dry leaves and bark, and even upon twigs. Thus, in even the coldest countries there is still some food for a portion of those quadrupeds that live upon vegetables; and these again afford subsistence for the carnivorous ones, as well as for the more powerful birds of prey. In very cold places too, the smaller quadrupeds, and even some of the larger ones, are so constituted that they hibernate, or pass the winter in a state of torpidity, in which they have no necessity for food, and consequently none for change of place. But in the severity of the northern winter the food of the feathered tribes fails. The earth and the waters are bound up in ice, so that the worms and larvae are beyond their reach; the air, which in summer is so peopled with insects, is left without a living thing; the buds of the lowly evergreen shrubs, and those seeds which have fallen to the ground, are hid under that cold but fertilising mantle of snow, which, cold as it seems, secures the vegetation of the coming summer; the berries and capsules that rise above the snow are soon exhausted; and the buds of the alpine trees are generally so enveloped in resin and other indigestible matters, that they cannot be eaten. Thus the birds must roam in quest of food: nor is it a hardship,—it is a wise provision. Were they to remain, and had they access to the embryos of life in their then state, one season would go far to make the country a desert; and even the birds would be deprived of their summer subsistence for themselves and their young. They are also provided with means by which they can transport themselves, in average states of the weather,

without much inconvenience; and thus, while in migration they seek their own immediate comfort, they preserve other races of being. In some of the species, too, they preserve a portion of their own race. It has been mentioned that the young of the swan are unable to migrate the first year; and of most migratory birds there are always a few that are unable for the fatigue of migration. If the strong did not go away, the whole of the weak, and, in cases like that of the swan, the whole of the young, would perish. After the moulting takes place, in most birds, perhaps in all of them in a state of nature, the paternal instinct ceases to operate; they feel no more for the brood of that year. It is each for itself individually during the necessity of the winter; and when the genial warmth of the spring again awakens the more kindly feelings, the objects of those feelings are a new brood. In her march nature never looks back; her instinct is fixed on the present, and thus leads to the future, without any reference to that experience which the progress of reason and thought requires. In consequence of this, the strong would take the food from the weak, the active from the feeble, and the full-grown from their offspring, if nature were not true to her purpose, and prompted the powerful to wing their way to regions in which food is more easily to be found, and leave the young and the feeble to pick up the fragments that are left, in those places which they are unable to quit.

"The migration of fishes is even a more curious matter than that of birds, especially in those that alternately visit salt and fresh water. The water is their atmosphere—the element from which they elaborate the air necessary for their life and growth; and any change of air, even nearly as great as the change from salt water to fresh, would be fatal to any land animal with which we are acquainted. Change of temperature in the element which they breathe is that which land animals can endure best; while fishes are adapted to bear a change in the composition. The former are protected against variations of temperature by the heat of their bodies being in general greater than that of the air; for when the air is warm, they suffer and pant, probably because they have no excess of heat to enable them to decompose the air, and mix the oxygen with the blood and the superfluous carbon. Fishes do not bear their change so easily. A salmon, when caught in the open sea, dies if put into fresh water; and if one that has been for some months in fresh water be put into salt, it also dies. It is the same with almost every fish. Hence the breathing apparatus of a fish must undergo a change every time that it passes from the sea to fresh water, or from fresh water to the sea. These changes are not immediate; and therefore the fish linger awhile in the estuaries upon every journey, in order that, by the brackish water, and by that alternate play of fresh and salt water which is occasioned by the tides, they may prepare themselves gradually for their new element. Though, generally speaking, the sea pasture tends more to promote the growth, vigour, and fatness of the fish than the river pasture, yet it also demands the stronger organisation; and thus those fish that enter the rivers for the purpose of spawning, are all of delicate descriptions; and the young often linger so long about particular parts of the estuaries, that they are not unfrequently mistaken for distinct species. Still, all this is in strict accordance with principle, and affords (as, in fact,

every thing upon which we can reflect affords) a proof that, though the works of creation be many, the plan and the purpose are one. There is not one power to adapt the fish to the water, and another to adapt the water to the fish; the adaptation is reciprocal, clearly proving that the power is one. The whole is one complete machine; and no part can be wanted or subsist alone. If the accomplishment of any purpose demands a change of power, or even of structure, there is ample provision for the effecting of that. When young frogs, and naked larvae of insects, continue habitually in the water, they have the fins and the habits of fish; but when they change their abodes, they change also their forms and habits."

[To be continued.]

SIGHTS OF BOOKS.

An Epitome of General Knowledge, with Derivations, Illustrations, and Historical Extracts; combining Instruction and Amusement. By Mrs. Hedgeland (late Isabella Kelly) and her Daughter. 2 vols. 12mo. London, Darton and Harvey; Joy: Richmond, Hughes.

THE title-page so entirely explains the nature of this miscellany, that we have nothing to say of it but that it really combines much of the useful and agreeable; and to remind readers that it is (with some filial aid) the production of the authoress of many a tome which had its period in contributing to the light and entertaining reading of the day—such as *Madeline*, *Eva*, *Modern Incident*, *Baron's Daughter*, *Jocelina*, *Avondale Priory*, the *Secret*, *Ruthinglaine*, &c. &c., besides works of a more lasting character. Not only on account of the merits of the present publication, but on behalf of an old public favourite, who has (like most others, we fear) found literature a thorny and barren pursuit, do we earnestly recommend these small volumes to general favour: judgment and benevolence will equally sanction their patronage.

The Life of a Midshipman: a Tale founded on facts. 12mo. pp. 264. London, 1829. Colburn and Bentley.

WHETHER the object of this volume be patriotic in a country of great naval power, namely, "to correct an injudicious predilection in boys for the life of a sailor," it is hardly worth while to inquire: suffice it to say, that the tale is a pretty and interesting one, and the declared purpose of it defeated by its own extraordinary circumstances. If we wished to deter youths from entering the navy, the daily hardships and privations of a seafaring life might be forcibly adduced; but wonderful contingences, unlikely to happen to any individual in the course of life, wrecks, pirates, &c. &c., have little effect upon the mind.

An Inquiry into the Causes of the Decline of Historical Painting, with the Means to be pursued for its Restoration. By Douglas Guest. 8vo. pp. 61. London, 1829. Simpkin and Marshall.

THIS is an essay written in answer to the following question, recently proposed by the Teylerian Society of Haarlem:

"What is the reason that the Dutch school of painting, even in the time of its greatest splendour, and also at this time, has produced so small a number of capital masters in the historic branch of painting, whilst it has constantly excelled in whatever relates to simple nature and the customary scenes of life? And what are the means to be pursued for the for-

mation of good history painters in this country?"

The paucity of great historical painters in the Dutch school, Mr. Guest imputes to the fact that the Dutch masters, however skilful in "the most felicitous combination of colours, and the most perfect imitations of their native scenes," were, and are, in general, "uninformed on matters of taste and literature, and consequently but ill prepared to illustrate subjects for which these acquirements are indispensable; or to contemplate the *beau-ideal* of nature, which can only be the result of refined associations and superior attainments." The remedy which he proposes, and which he justly observes is as applicable to other countries as to Holland, is to give to the young student in art such an education as, while it afforded him the opportunity of thoroughly grounding himself in the mechanical practice of his profession, should impart to him the mental vigour and refinement indispensable to excellence in the nobler efforts of the pencil. To this, Mr. Guest would add such subsequent encouragement and protection by the state, as might enable the artist of genius to pursue his studies undisturbed by any reference to mere worldly considerations.

Annals of the Peninsular Campaigns—from 1808 to 1814. By the Author of "Cyril Thornton." 3 vols. 12mo. Edinburgh, W. Blackwood; London, T. Cadell.

FROM the author of Cyril Thornton, with his Caesar-like accomplishments of sword and pen, much was to be expected on the subject of the war in Spain: and after all that has been written on that subject, it affords us pleasure to say that these popular volumes will be read with a new delight. Having received them at a late period of the week, when our sheet was already *filé*, we shall, at present, say nothing farther, but that they form an extremely interesting publication, and one likely to be highly acceptable to the British people.

Dr. Mc Crie's History of the Progress and Suppression of the Reformation in Spain in the Sixteenth Century. 8vo. Same Publishers. OF this volume, which reached us at the same time as the preceding, we have only room to say that it is a curious, a valuable, and a sterling work.

Memoirs of the Life and Times of Daniel de Foe, containing a Review of his Writings, and his Opinions, &c. &c. By Walter Wilson, Esq. of the Inner Temple. 3 vols. 8vo. London, 1830. Hurst, Chance, and Co.

DR Foe, the author of between two and three hundred publications, and, above all, the author of Robinson Crusoe, has a just claim to the revival of his memory at any period of English literature; and we hailed the announcement of this work with great expectations. We are disappointed in it. Mr. Wilson has bestowed great diligence and research, and his volumes are really full of De Foe's writings and history, consequently possess a certain degree of interest; but to us it appears that he has laboured trifles too much, and neglected subjects of far more popularity. Who cares at this day for the party squibs and pamphlets of a century ago?—few even in the gross, or when brought to throw a light on the great events of the times; and certainly none in the mere details of pamphletting and squabbling. Still there is much in these volumes which will be read with interest; and we are only sorry there is not (as there well might have been) more. The writer himself seems imbued deeply with opinions which

hardly allow him to be an authority where we would look for truth.

Tales of Four Nations. 3 vols. 12mo. London, 1829. Whittaker, Treacher, and Arnot.

THE circumstances under which this first appeal of a novel writer to the public has been made, have been represented to us in so interesting a light by one of those authors whose talents and right feelings shed a lustre each on each, that if we were inclined to be critically severe upon it we could not. Nor yet will our sense of impartial justice permit us to praise the work for more than an honest effort to please the general reader. The class of novel-writing stands so high, that what was once excellence is now mediocrity, or even below that standard: but we pray encouragement for this attempt for better reasons than its literary merits, though the latter will suffice to entertain the numerous body who indulge in the circulating library.

ORIGINAL CORRESPONDENCE.

Paris, Nov. 16.

IT is pretended by some mathematicians that each century must produce a certain portion of evil, and also that there is a leap year of crime, when unfortunate humanity is forced, *bongré et malgré*, to perform every vice contained in Lucifer's calendar, merely to prevent a deficit in the calculation of black deeds, and make evil bear a due proportion to good. We are now, it appears, bringing up the arrears of sinning left incomplete by our idle forefathers; at least, thus it was that, last evening, a little strange-looking man, in a bob wig, accounted for the numerous suicides, thefts, assassinations, &c. which have been committed in the last twelve months. Had the oracle in question been his Holiness or Saint Anthony, he could not have excited greater interest: each knock of his cane, or rather club, electrified his auditors into implicit faith, every blow having an enforcing effect on the intellects of his hearers. "Love," said the speaker, "engenders so many murders, ambition so many, hatred so many." In fact, to every sentiment he gave a numerous progeny of crime. Happily, he consoled his auditors by assuring them, that in a thousand years human passions would be so purified or deadened, that an incitement to evil would no longer be felt; but that we should live in a Platonic state, "bearing and forbearing," I suppose, like so many donkeys. Though the speaker produced several and various arguments to prove the reason of his reasonings, the thickness of my pericranium totally prevented my understanding them; but a pamphlet which he is about to publish on the subject will, no doubt, soon appear, and enlighten that enlightened part of creation who comprehend circles, squares, and triangles,—for it was by means of such that he has been enabled to tell, to a feather's weight, the quantum of sin up to the year nineteen hundred. During the lecture, my attention was attracted by the appearance of a gentleman, who each year surprises his friends at having survived the fall of the leaf. His visage preserved the same ghastly and ghostly appearance, but his person sported an *embonpoint*, which induced all former acquaintance to felicitate him on returning health, and his having *repris* his fat. *Repris* was not the word, for the poor man never possessed an ounce of flesh, and though now a very comely personage, he owes it all to air. I do not pretend to say he is aerial; but by means of a new-invented oil-skin garment, fabricated Heaven knows how, this spindle-shanked skeleton Monsieur is swelled into the fairest por-

tion. It appears that any gentleman with whom nature has dealt scantily, has only to purchase one of these apparatus, into which, when decked with it, his valet de chambre must blow with all his might and main, for five minutes, through a narrow aperture or fictitious vein: Monsieur then may be said to be in full puff, and vie, at pleasure, with an Apollo or a Hercules. Who says that art is on the decline, and that we are retrograding? *La Martine* has become one of the Academy; and the jokers say, it is placing a nightingale with crows. Amongst the honours lately conferred, the decoration of the Légion d'honneur has been given to Dupuytren and Majendie.

ARTS AND SCIENCES.

ANCIENT AND MODERN EGYPT.

M. Champollion's Fourteenth Letter—concluded.

RELIGIOUS pictures executed with much care are under the shaft of the great and small pillars of the hypostyle hall. We there see successively all the Egyptian divinities of the first order, and principally the one whose worship belonged in a more especial manner to the Diospolitan nome, announce to Rhameses the benefits they intend to confer upon him, in return for the rich offerings which he presents to them. Here, as in the sculpture of the pillars and columns of the second court, we find in the first line the guardian divinities of the palace to whom this beautiful edifice was more particularly consecrated. They always take a title which is exactly translated by, "residing, or who reside, in the Rhamesseion of Thebes." At their head appears Ammon-Ra, in the form of king of the gods, or Ammon-Generator. Then come the gods Phtha, Phré, Atmou, Meui, Sev, and the goddesses Pascht and Hathor. Each of them grants to the Pharaoh a particular favour: the following are some examples of these forms of donation, taken from the galleries and colonnades of the Rhamesseion.

"I grant that thy edifice shall be as durable as heaven" (Ammon-Ra). "I give thee a long series of days to govern Egypt" (Isis). "I grant thee dominion over all countries" (Ammon-Ra). "I inscribe to thy name the royal attributes of the Sun" (Thoth). "I grant thee to conquer like Mandou, and to be vigilant as the son of Netphe" (Ammon-Ra). "I deliver to thee the south and the north, the east and the west" (Ammon-Ra). "I grant thee a long life to govern the world by a joyful reign" (Sev). "I give thee Upper Egypt and Lower Egypt to govern as king" (Netphe, i. e. Rhea). "I deliver to thee the barbarians of the south and those of the north to tread under thy sandals" (Thmet, i. e. justice). "I will open to thee all the good gates which are before thee" (the Guardian of the Celestial Doors). "I will that thy palace shall exist for ever" (Meui). "I grant thee great victories in all parts of the world" (the goddess Pascht). "I grant that thy name shall be impressed in the hearts of the barbarians" (the goddess Pascht).

The portion of the walls of the hypostyle hall which has escaped the destructive hand of man, presents scenes more rich and more developed. On the farther wall, to the right and the left of the central door, are still two vast pictures, remarkable for the large size of the figures and the excellence of the execution. In the first, the goddess Pascht with a lion's head, the wife of Phtha, the lady of the celestial palace, raises her right hand towards the head of Rhameses, which is covered with a helmet,

saying to him,—"I have prepared for thee the diadem of the Sun; let this helmet remain upon thy brow (forehead), where I have placed it." At the same time she presents the king to the supreme god Ammon-Ra, who, seated on his throne, holds towards the king's face the emblems of a pure life.

The second picture represents the royal investiture of the Egyptian hero; the two greatest divinities of Egypt investing him with the royal powers. Ammon-Ra, assisted by Mouth, the great divine mother, delivers to King Rhameses the sithe of battle, the primitive type of the harp of the Greek fables,—a terrible weapon, called *schopach* by the Egyptians, and delivers to him at the same time the emblems of direction and moderation, the whip and the pedom, pronouncing the following words:—"Hear what Ammon-Ra says, who resides in the Rhamesseion,—receive the sithe of battle to awe foreign nations and to cut off the heads of the impure: take the whip and the pedom to direct the land of Keme" (Egypt).

The base of these two pictures affords a different kind of interest. Here are represented, on foot, and in the strict order of primogeniture, the sons of Rhameses the Great. These princes are habited in the costume peculiar to their rank. They bear the badges of their dignity—the pedom, and a fan made of a long ostrich plume, fixed to an elegant handle. They are twenty-three in number—a numerous family, it is true, but at which we shall not be surprised, when we remember that Rhameses had, as we know, two lawful wives, Queen Noré Ari and Isenofre; and it is, besides, very probable that the sons of the conqueror by concubines or mistresses, ranked with the legitimate children,—a custom which is confirmed by the whole ancient history of the East. However, over the head of each of the princes is sculptured, first, the title which is common to them all—namely, the son of the king and of his race; and for some of them (the first three, and consequently the eldest) the designation of the high functions with which they were invested at the time when these bas-reliefs were executed. Thus the first is styled fan-bearer to the left of the king, the young royal secretary, (basilicogrammate) commander-in-chief of the soldiers, the first-born and the preferred of his race, Amenhischopech; the second, named Rhameses, like his father, was fan-bearer to the left of the king and royal secretary, commander-in-chief of the soldiers of the master of the world, (the troops composing the king's guard); and the third fan-bearer to the left of the king, like his brothers, (a title given in general to all the princes upon other monuments), was also royal secretary, commander of the cavalry, namely, of the war-chariots of the Egyptian army. I omit here the names of the twenty other princes; and shall only remark, that the names of some of them certainly allude either to the victories of the king at the time of their birth,—such as Nebenschari (master of the country of the Schari), Nebenthonib (master of the whole world), Sanaschtenamoun (the conqueror through Ammon); or to new titles adopted in the protocol of Rhameses the Great—as, for instance, Pataveamoun (Ammon is my father), and Setperi (approved by the Sun), a title which is met with in the prenomen of the king.

I observed, at the same time, in this series of princes, a very remarkable fact. After the death of Rhameses the Great, the one of the twenty-three sons who ascended the throne after him has been characterised in a particular manner. It was his thirteenth son, named Menephtha, that succeeded him. It is

plain that the costume of this prince was, in consequence, altered afterwards, by adorning his forehead with the uræus, and changing the short sabou into a long royal tunic. Besides this, close to his first legend, containing the name of Menephtha, which he retained on ascending the throne, the first cartouche of his royal legend has been sculptured, (Sun, spirit loved by the gods), which is in fact found on all the monuments of his reign.

On leaving the hypostyle hall by the central door, we enter a hall which has preserved part of its columns, the decoration of which is of a very peculiar character. In that portion of the palace which we have just visited, general acts of homage are addressed to the principal divinities of Egypt, as was proper in courts or peristyles open to all the people, and in the hypostyle hall where the great assemblies were held. But here really begin the private parts of the palace, and the apartments which served for the habitation of the king; the place considered to be the more peculiar abode of the king of the gods, to whom this great structure was dedicated. This is proved by the bas-reliefs sculptured on the walls, to the right and left of the door, which represent four great barks or sacred bari, carrying a little naos, over which a veil is thrown, as if to conceal from all eyes the person it contains. These bari are borne on the shoulders of twenty-four or eighteen priests, according to the dignity of the master of the bari. The insignia which adorn the head and the stern of the first two barks are the symbolic heads of the goddess Mouth, and the god Chons, the wife of the son of Ammon-Ra. The third and fourth bear the heads of the king and queen, adorned with the marks of their dignity. These bas-reliefs, as we are informed by the hieroglyphic legends, represent the two divinities, and the royal pair coming to do homage to the father of the gods, Ammon-Ra, who fixes his abode in the palace of Rhameses the Great. The words pronounced by each of the visitors leave no doubt on this head: "I come," says the goddess Mouth, "to do homage to the king of the gods, Ammon-Ra, the moderator of Egypt, in order that he may grant long years to the king, his son Rhameses, who loves him."—"We come to thee," says the god Chons, "to serve thy majesty, O Ammon-Ra, king of the gods! Grant a stable and pure life to thy son, who loves thee, the lord of the world."—King Rhameses says only, "I come to my father, Ammon-Ra, following the gods whom he admits to his presence for ever."—But the Queen Noré Ari, here surnamed Ahmosis, expresses her wishes more positively—"Hear what is said by the goddess consort, the royal mother, the royal spouse, the powerful lady of the world, Ahmosis Noré Ari; I come to render homage to my father Ammon, king of the gods; my heart rejoices in thy affection: I am in delight when I contemplate thy benefits. O thou who fixest the seat of thy power in the abode of thy son, the lord of the world, Rhameses, grant him a stable and pure life; let his years be counted by periods of panegyrics."

Lastly, the wall at the farther end of this apartment was adorned with several sculptures representing the accomplishment of these wishes, and recording the favours which Ammon-Ra granted to the Egyptian hero: only one now remains, on the right of the door. The king is represented as seated upon a throne at the foot of that of Ammon-Ra Atmou, and in the shade of the spreading foliage of a persea, the celestial tree of life. The great god and the goddess Saf, who presided over writing or

learning, tracing on the cordiform fruits of the tree the cartouche containing the prenomen of Rhameses the Great; while, on the other side, the god Thoth carves the cartouche containing the proper name of the king, to whom Ammon-Ra Atmou addresses the following words: "Come, I sculpture thy name for a long series of days, that it may subsist upon the divine tree."

The door leading from this hall to a second, which was also decorated with columns, of which four still remain, deserves particular attention, as well for the workmanship as for the sculptures which adorn it. The sculptures that cover the architrave and the jambs are in such low relief, that it is evident they have been carefully rubbed down, to diminish their projection. I ascribed this to time and to barbarism, which have certainly acted upon several parts of these surfaces; for, having caused the lower parts of the jambs of this door to be cleared, I read a dedicatory inscription of Rhameses the Great, in the usual form of dedications for doors; but it adds, that this door was covered with pure gold. I then looked at the surface with more care, and, on examining more closely the kind of white and fine stucco which still covered some parts of the sculpture, I perceived that this stucco had been spread upon a cloth applied to the sculptures; that the contours and the projecting parts of the figures had been restored upon the stucco before the gilding was applied to it. As the process appeared to me to be curious, I have thought it proper to mention it here.

But the two pictures which adorn this door afford a much more lively interest. The architrave and the upper part of the jambs are covered with a dozen little bas-reliefs, representing King Rhameses adoring the members of the Theban triad. These divinities all turn their backs to the entrance of the door in question, because they are connected only with the first hall, and not with the second, to which this door is the entrance. But at the bottom of the jambs, and immediately above the dedication, two divinities are sculptured, with their faces turned towards the opening of the door, and looking towards the second hall, which was, consequently, under their jurisdiction. These two divinities are, on the left hand, Thoth with the ibis head, the god of sciences and arts, the inventor of letters; and on the right, the goddess Saf, the companion of Thoth, bearing the remarkable title of Lady of Letters and Presidentess of the Library (literally, the hall of books). Besides, the god is followed by one of his attendants, who, by his legend and a large eye which he bears upon his head, we recognise to be the sense of sight personified; while the attendant of the goddess is the sense of hearing, characterised by a large ear, drawn also over his head, and by the word *sotem* (the hearing) sculptured in his legend: he, besides, holds in his hand all the implements of writing, as if to write down all that he hears.

I ask whether it is possible to indicate better than by such bas-reliefs the entrance of a library? And at this word, the controversy which divides our learned men respecting the celebrated monument of Osymandias, so well known for its library, and on its connexion with the Rhamesseion, naturally occurs to me.

At the very beginning of my visit, when reading in the midst of the ruins of the Rhamesseion the description which Diodorus has preserved, I was struck on finding around me, and in the same order, the analogous parts, and almost the most trifling details, of the great edifice, of which Diodorus has borrowed from

Hecateus so complete a description. In the first place, the old Greek traveller places the monument of Osymandias at the distance of ten stadia from the last tomb of what he calls the *παλλακίδες του Διός*, the concubines of Jupiter (Ammon). We have, in fact, found, at nearly an equal distance from the Rhamesseion, a valley containing the tombs, still adorned with painting and inscriptions, of twelve women, but of Egyptian queens, whose first title in their legend was always that of Consort of Ammon. The monument of Osymandias had in front a great pylon of variegated stone (*λίθου ποικίλου*). The first pylon of the Rhamesseion, the massive walls of which are of reddish freestone, and the door of white limestone, has some analogy with this description. From this pylon was the entrance into a peristyle, the pillars of which were ornamented with colossal figures; then followed a second pylon, much more carefully executed than the former with respect to the sculpture, and at the entrance of which was the greatest colossus in Egypt, of one single block of granite of Syene. All this resembles the Rhamesseion, except some difference in the measures; but we are not certain that the ancient copyists have transcribed these measures correctly. There we still see the immense fragments of the greatest known colossus of Egypt, of Syene granite:—these are remarkable circumstances.

In the peristyle which succeeded the pylon, says Hecateus, was represented the king, who is called Osymandias, making war against the rebels of Bactria, besieging a city surrounded by a river, &c. &c. This is the exact description of the bas-reliefs which still exist under the second peristyle of the Rhamesseion; and if we no longer see the lion fighting with the king against the enemy's troops, nor the four princes commanding divisions of the army, it is because the walls at the farther end of the peristyle are destroyed, and only the eighth part now exists. It is true that we elsewhere see, on the monuments of Egypt, kings besieging cities surrounded by a river: this is really the case at Ypsamboul, at Derri, on the pylons of Luxor, and the Rhamesseion; but these are all monuments of Rhameses the Great, and represent the events of the same campaign.

On the second wall of the peristyle, says the description of the monument of Osymandias, are represented the captives brought back by the king from his expedition; they have no hands: and on the back wall of the peristyle of the Rhamesseion I have discovered, by digging, the remains of a picture in which prisoners are brought to the king, at whose feet is a pile of hands cut off. On a third side of the peristyle of the monument of Osymandias were represented sacrifices, and the triumph of the king on his return from this war. In the Rhamesseion, the upper part of the wall, on which the battle is sculptured, represents the end of a grand religious solemnity, at which the king and the queen were present: and this picture began, without any doubt, on the wall at the back of the right side of the peristyle. After that, says the Greek historian, we enter the hypostyle hall of the monument of Osymandias by three doors, ornamented with two colossal. All this is found in the Rhamesseion, and likewise immediately after the second peristyle. After the hypostyle of Osymandias came an open space, designated in the French translations by the name of *promenoir* (the walk). In the Rhamesseion, a hall, decorated with the symbolical barks of the gods, succeeds the hypostyle hall. Then, says Diodorus, came the library; and it is, in fact, on the door which

leads from the promenoir of the Rhamesseion to the next hall, that I have found bas-reliefs so suitable for the entrance of a library. The hall of the library is at present almost entirely razed. There remain of it only four columns and a portion of the walls to the right and left of the door. On these walls are sculptures representing the king making offerings in succession to the greatest divinities of Egypt—to Ammon-Ra, Mouth, Chons, Phré, Phtha, Pascht, Nofri-Thmon, Atmou, and Mandou; and besides, the greater part of these walls is occupied by two enormous representations, divided into numerous vertical columns, in which are three long series of names of divinities, and their images of a small size: it is a complete pantheon. The king, standing before each of these synoptical representations, makes libations and offerings to all the gods and goddesses, great and small, by name; and this is another resemblance with the monument of Osymandias. In fact, the Greek description says: "In the hall of the library are seen the images of all the gods of Egypt: the king presents to them, in the same manner, offerings suitable to each of them."

This comparison of the ruins of the Rhamesseion with the description of the monument of Osymandias preserved by Diodorus Siculus, has already been made, and much more in detail, by MM. Jollois and Devilliers, in their general description of Thebes,—an important work, on which I am happy to bestow the praise that is its due, because I have seen the place, and have been able to judge by my own eyes of the correctness of their descriptions. But I have thought it necessary to give a slight sketch of this parallel, because I desire to put in their true place some new facts which I have observed, and which render so striking the analogy of the monument described by the Greeks with that of which I have studied the ruins. The two learned travellers whom I have just quoted have shewn this identity: others have contested it: for my part, the following is my profession of faith. Either the monument described by Hecateus, under the name of the monument of Osymandias, is the same as the western Rhamesseion of Thebes; or the Rhamesseion is only a copy, with the exception of the difference in the measures, if we may say so, of the monument of Osymandias.

Here terminate the ruins of the palace of Sesostris. There remain no traces of his later buildings, which must have extended towards the mountain. The Rhamesseion is, of all the monuments of Thebes, that which is in the most dilapidated state; but it is also, without any doubt, that which, by the elegant majesty of its ruins, leaves the most profound and durable impression on the mind of the traveller.*

* By a letter just received from Captain Briggs, we are informed that M. Champollion and his companions, and also the Tuscan portion of the Egyptian expedition, were on the eve of embarking for Europe. They are now, therefore, on their way home, with all the treasures of ancient lore they have collected. In the meantime we may remark, that though less publicity has been given to their discoveries and labours, Englishmen have not been behind the rest of the world—but, on the contrary, the leaders—in these interesting investigations. Mr. Bankes' portfolio has long been known to be rich in hieroglyphic literature; and, more recently, we have seen fac-similes of almost all the important inscriptions and pictures visited by M. Champollion, copied during ten years' stay in Egypt by Mr. Wilkinson; others by Major Orlando Felix; and others by Mr. Burton. It may well be supposed, that collections made with such care, and employing so long a time, are at least fully equal to all that could be acquired during a hurried expedition; and, without detracting from the merits of our foreign rivals in this laudable inquiry, which we highly appreciate, we think we may fairly put in our own national claim for great consideration and great success. By an advertisement in our *Gazette* of this date, it will be farther seen that the Royal Society of Literature is warmly advancing

ZOOLOGICAL SOCIETY.

THE death of a male ostrich, which had been for some time in the collection of the late Marchioness of Londonderry, and subsequently presented, with other valuable animals, to the Zoological Society, has afforded an opportunity, which rarely occurs, of examining the internal structure of that extraordinary bird, in comparison with that of man and other animals. The dissection took place in the Gardens of the Society, under the direction of Mr. Brooke, who introduced a variety of preparations in illustration of the anatomical peculiarities of the ostrich. The examination, which occupied two days, excited much interest, and attracted a scientific and numerous audience. The animal that formed the subject of it had been for some time in ill health, occasioned, in the first instance, by an accident which happened to it before it became the property of the Society. A female ostrich, which was presented at the same time, is still living in the Gardens.

The Society, we are informed, has also received from India the body of a female orang-outang, which has recently been sent over in spirits by George Swinton, Esq. a corresponding member of the Society. An examination of the internal anatomy of this animal, which approaches so nearly to that of man, and admits of much interesting illustration, will, it is presumed, form a subject of considerable curiosity among the scientific visitors of the establishment. It will take place at the Gardens in the course of the present month. The male orang-outang, which has survived its companion, is now, we believe, on its way to this country; and, if it arrives in safety, will be an important addition to a class of animals which has afforded so much amusement to the Zoological public during the summer. Models of these two animals, sent from India by the same gentleman, are now in the Society's museum, in Bruton Street: they are the work of native artists, and display considerable skill and ingenuity.

LITERARY AND LEARNED.

OXFORD, Nov. 14th.—Thursday last the following degrees were conferred:—
Bachelor in Civil Law.—Rev. F. Gooch, Fellow, All Souls' College.

Masters of Arts.—Rev. R. W. Bosanquet, Rev. J. F. Alleyne, Balliol College; Rev. E. B. St. John, St. Alban Hall; J. Trotman, Worcester College; Rev. W. Leslie, Rev. M. Getley, Lincoln College; Rev. J. G. Dowling, Wadham College.

Bachelors of Arts.—H. Tuffnell, J. Dixon, Christ Church College, Grand Compounders; G. Richards, All Souls' College; H. T. Worley, Queen's College; G. H. Clifton, Scholar, Worcester College; R. Poole, Exeter College; W. H. Newbolt, R. Price, E. Payne, Fellows, New College.

CAMBRIDGE, Nov. 14th.—The subject of the Norrison prize essay for the ensuing year is—*The Christian Religion the last Revelation to be expected of the Will of God*.

THE STUART PAPERS.

AWARE of the great interest that has been and is attached to the remarkable documents, known by the name of the *Stuart Papers*, which were brought from Rome after the death of Cardinal York, the last of the family, and placed in the hands of commissioners appointed by his Majesty, we are glad to find that they are no longer likely to remain in the obscurity of St. James' Palace, where they were depo-

the knowledge of hieroglyphic literature, to which Dr. Young's facsimile are of the utmost consequence; and we may add, that at the last meeting of this Society (see Report) a Part of Mr. Wilkinson's very interesting specimens, lithographed at Cairo, was presented, and excited great attention. As yet, we have examined no work so evidently throwing a clear light on the legends of the Pharaohs; and we rejoice to have an English copy of these records to compare with M. Champollion's, when the latter shall appear.—Ed. L. G.

sited. The King, we are informed, has now transferred these papers to Sir Walter Scott, for examination and publication; and we have reason to know, that his son-in-law, Mr. Lockhart, is already engaged in this important duty, and actively employed in arranging the mass, which certainly could not be in better hands.

ROYAL SOCIETY.

THURSDAY (Season 1829-30), the President in the chair. The meetings were resumed this evening. Part of a long and able paper, from the pen of Mr. Faraday, on the manufacture of glass for optical purposes, was read. As we shall have the satisfaction of laying it before our readers in a subsequent number, we need not offer any analysis of it at present. A folio edition, in five vols. of the Catalogue of the King's Library, presented by his Majesty, and other literary presents, were made, for which thanks were voted to the donors.

ROYAL SOCIETY OF LITERATURE.

THE Society's library continues to be enriched by numerous contributions. Among the volumes laid upon the table at the first meeting for the season, were the works of the Baron Silvestre de Sacy, consisting chiefly of publications from, or commentaries upon, Arabic literature, as the "Séances de Hariri," "Chrestomathie Arabe," &c. The same liberality on the part of the members and correspondents of the Society was evinced at the last meeting, in the donations of Mr. Millingen, who presented his splendid publication on Greek Vases, his "Medallic History of Napoleon," &c.; in the "Traditions of Lancashire," by J. Roby, Esq., a member; and in interesting works of other contributors. The Society's Collection of Hieroglyphics was augmented by the addition of the third part of Mr. Burton's "Excerpta Hieroglyphica," printed at Cairo; and by No. 1 of a similar work, likewise executed in Egypt, by Mr. Wilkinson.

The paper read was "On an extraordinary collection of Oriental Alphabets," by Sir Wm. Ouseley. The manuscript containing the collection referred to was procured at Calcutta by Lord Teignmouth, and exhibits several hundred alphabets. In shewing that while some of these are probably nothing else than ciphers, invented for the purpose of secret correspondence between individuals, others are, probably, altogether imaginary, the writer noticed the extravagant opinions entertained by the learned of former times relative to the origin of alphabetic characters; such as their being invented by angels, their communication to Adam by Divine revelation, &c. The Persepolitan character is found in this collection; but the copyist, or collector, appears to have indulged his fancy by combining the simple element of the arrow, or wedge, into more complicated forms than we can suppose to have ever been in actual use. For the purpose of illustrating this part of his subject, two specimens of marble, inscribed with the arrow-headed character, brought by Sir W. from Persia, were produced for the inspection of the meeting. The surface of one of these fragments appears to be partially covered with a yellowish paint, or similar composition, mistaken by travellers for gold; from which circumstance the writer was led to some ingenious remarks, tending to point out the probability that the singular anomaly in taste which prevailed among the Greeks and Romans, in adding painting and gilding to their sculptures, may have been derived from the practice of the Persians.

The fifth Fasciculus of the Society's publica-

tion of Hieroglyphics, hitherto conducted by the late Dr. Young, would, it was stated, shortly appear, under the auspices of some of its members, of acknowledged Egyptian learning, from drawings left by that lamented antiquary.

FINE ARTS.

THE BRITISH INSTITUTION.

ON Wednesday there was a private view, at the British Gallery, of the studies which have been made from the pictures of the old masters, forming part of the late exhibition, but left, according to the liberal usage of the Institution, as a small and temporary, though valuable, school of painting. We deeply regret to say, that the number of students, male and female, has been much larger during the present than during any preceding season. We regret it, for reasons which we have too frequently repeated to render it necessary again to state them; and we shall therefore content ourselves with most earnestly advising nine-tenths of these young persons to devote themselves, ere it becomes too late, to some less ambitious, but more profitable, pursuit.

The pictures which have evidently been the favourite subjects of study are, "the Holy Family," by Sir Joshua Reynolds, and "Landscape, with Market-People," by Gainsborough, belonging to the British Institution; the "Portrait of a Lady," by Rembrandt, belonging to Lord Wharfedale; the "Full-length Portrait of an elderly Gentleman," and "Full-length Portrait of an elderly Lady," by Vandyke, belonging to Mr. Peel; the "Inside of a Kitchen," by Maas, belonging to Mr. Hamlet; the "Woman milking a Cow," by Cuyt, belonging to Mr. Zachary; the "Holy Family, with St. Catharine," by Titian, belonging to Sir J. Roe Reid; the "Portrait of a Venetian Senator," by Titian, belonging to Sir A. Hume, &c.

And first for our distinguished countrymen. If there were as many real "Holy Families" in England as there are at present representations of them on the walls of the British Gallery, we should indeed be a pious people. We have no hesitation in saying that a small copy in water-colours, by Miss Fanny Corbeux, combines more of the various qualities of the original than any other in the room: it exhibits all Sir Joshua's breadth, and yet is highly and beautifully finished in those parts in which it ought to be so. Mr. Middleton and Mr. Boaden have made two of the finest copies, in oil, as large as the original; and, besides some very able studies of various sizes, by Mr. Flak, Mr. Childs, Mrs. Pearson, &c., there are several, out of sight and out of light, which, for aught we know, deserve particular notice.—We have a great respect for Mr. F. W. Watts; but what business had he in the Gallery, except as a spectator, not an imitator? His own style is too excellent and true to nature to require any change. As to his copy of Gainsborough, it is a fac-simile. There are also two very clever studies of the picture by Mr. A. Johnson and Mr. Passmore; and a beautiful little copy in water-colours by Mr. Fussell.—There are numerous studies from Rembrandt's "Portrait of a Lady." Of those which are on a level with the eye, and of which we are therefore enabled to form a judgment, the best strike us to be by Mr. Buss, Mr. Irvine, Mr. P. Simpson, and Mr. Middleton. Time, which has done much for the splendid but mellow original, will likewise do much for these imitations of it.—Of Vandyke's "Elderly Lady and elderly Gentleman" there

is also a grave and goodly assemblage. The smaller studies seem to us to be in general the most happy. Mr. Irvine and Mr. Flak have each one of the male subject in oil; and Mr. Heaphy an exquisite one in water. Mr. R. Bone also has two clever drawings from these subjects. Of that exceedingly brilliant and difficult picture by Maas, "The Inside of a Kitchen," Mr. Fowler has made a highly successful copy; as has also Miss Alabaster, the warmth of whose colouring is certainly not in consonance to her name. Though too highly placed to be critically examined (and several others are in a similar predicament), a study of this picture by Mr. W. Bone appears to possess considerable merit. To Mr. Lee, who has produced an admirable copy of the Cuyt, we say what we said to Mr. Watts:—It may be well for an artist of his original genius to look at fine old pictures; but let him paint from nature, and only from nature. Mr. Earl's study is also a close approximation to the master. There are several other very clever imitations of this glowing work.—Of Titian's "Holy Family" there is a small copy in oil—we regret to say that we cannot remember the name of the artist—which requires only the operation of time to assimilate its tones to those of the original. Mr. Heaphy has also made a delicious copy in water-colours. The same great master's "Venetian Senator" has found a very able imitator in Mr. Flak. Besides the above mentioned, which are among the most prominent, there are some clever studies after the above, as well as Canaletti, De Hooge, Teniers, Berghem, &c. by Mr. Watts, Miss Du Jardin, Mr. Earl, Mr. Novice, Mr. Sargent, Mr. McClise, Mr. Rosenberg, &c.

After experiencing the monotony of feeling which attends the contemplation of so many repetitions of pictures, we were gladdened and refreshed by the sight of an original—a free transfer to canvass, by Mr. J. Scarlett Davis, of the Interior of the British Gallery itself. It contains a combination of the various excellencies which the walls of the Gallery exhibit. The subjects introduced are not detailed, but their general character is happily expressed. The regular architectural forms of the rooms are judiciously broken by busts and a curtain; and the whole is richly and harmoniously coloured. We must also notice another departure from servile imitation, in a beautiful picture in water-colours, by Miss Fanny Corbeux, of two children. The head of the infant Christ, in Sir Joshua's "Holy Family," is the only copied portion of this little work; the rest is original composition, finely adapted to Sir Joshua's general style.

One hint,—we are not sure that we have not given it before,—to the younger students in future years. When they enter the Gallery, they ought to endeavour to forget all the processes of painting to which they have been accustomed, and to endeavour to discover those of the great masters before them: they should act like a judicious traveller, who, for a while, lays aside the habits of his own land, and tries to accommodate himself in every respect to the manners and usages of the countries which he visits.

ORIGINAL POETRY.

THE SISTER'S VOICE.

"O what a voice is silent!"—Barry Cornwall.

O my sister's voice is gone away!
Around our social hearth
We have lost its tones, that were so gay,
So full of harmless mirth—

We miss the glancing of her eye,
The waving of her hair,
The footsteps lightly gliding by,
The hand so small and fair;
And the wild bright smile that lit her face,
And made our hearts rejoice—
Sadly we mourn each vanished grace,
But most of all her voice.

For oh! it was so soft and sweet
When it breathed forth in words;
Such tones it had as hearts repeat
In echoes on their chords;
And lovely when in measure soft
She sung a mournful song,
And heavenly when it swelled aloft
In triumph chorus strong;
And dearest when its words of love
Would soothe our bosoms' care,
And loveliest when it rose above
In sounds of praise and prayer.

O, in my childhood I have sate,
When that sweet voice hath breathed,
Forgetful of each merry mate—
Of the wild flowers I had wreathed;
And though each other voice I scorned
That called me from my play,
If my sweet sister only warned,
I never could delay.
'Twas she who sang me many a rhyme,
And told me many a tale,
And many a legend of old time
That made my spirit quake.

There are a thousand pleasant sounds
Around our cottage still—
The torrent that before it bounds,
The breeze upon the hill,
The murmuring of the wood-doves' sigh,
The swallow in the eaves,
And the wind that sweeps a melody
In passing from the leaves,
And the pattering of the early rain,
The opening flowers to wet,—
But they want my sister's voice again,
To make them sweeter yet.

We stood around her dying bed,
We saw her blue eyes close;
While from her heart the pulses fled,
And from her cheek the rose.
And still her lips in fondness moved,
And still she strove to speak
To the mournful beings that she loved,
And yet she was too weak;
Till at last from her eye came one bright ray,
That bound us like a spell;
And as her spirit passed away,
We heard her sigh, "farewell!"

And oft since then that voice hath come
Across my heart again;
And it seems to speak as from the tomb,
And bids me not complain:
And I never hear a low soft flute,
Or the sound of a rippling stream,
Or the rich deep music of a lute,
But it renews my dream,
And brings the hidden treasures forth
That lie in memory's store;
And again to thoughts of that voice gives
birth—
That voice I shall hear no more.

No more!—it is not so—my hope
Shall still be strong in Heaven—
Still search around the spacious scope
For peace and comfort given.
We know there is a world above,
Where all the blessed meet,
Where we shall gaze on those we love,
Around the Saviour's feet;

And I shall hear my sister's voice
In holier, purer tone—
With all those spotless souls rejoice,
Before the Eternal Throne.

Worton Lodge, Isleworth.

M. A. BROWNE.

DRAMA.

DRURY LANE.

IF an interesting plot, admirable situations, dialogue alternating between the sportive and the affecting, beautiful scenery, excellent acting, and powerful stage effects, can secure popularity to a drama, *the Brigand*, by Mr. Planché, produced here on Wednesday evening, will have a most successful run, as it had a most auspicious commencement. We seldom like to detail the stories of dramatic pieces, because it diminishes the pleasure with which they are seen; and therefore it shall suffice on this occasion to notice that the author has completely realised the extraordinary class of banditti who have for years infested the Roman states. *Massorini*, the captain whose adventures are represented, though a being of incredible audacity and vicissitude, and though both he and his associates display an unnatural mixture of religious, or rather superstitious, feelings, with the commission of the deepest crimes, yet are they not overdrawn, but true to the life as life itself. In short, this performance strictly embodies the actual brigandage of Italy, as described in the most authentic accounts that have been published (and some in our own possession, with which we shall hereafter entertain our readers), and places before us, in the forms of skilful actors, the pictures of Davis, Brockedon, Eastlake, and other artists, who have studied the subjects on the spot. Throughout its whole progress *the Brigand*, thus finely constructed and ably supported, was received with unmixed applause; and at the fall of the curtain, on its very striking catastrophe, the audience joined in one hearty shout of acclamation. We have never witnessed so marked a triumph for so unassuming a production; but Mr. Planché's knowledge of the stage, and attention to every point which can add verisimilitude to dramatic composition, gives him a great advantage and mastery in these apparently slight but important particulars. Wallack, as the Robber-chief, greatly distinguished himself in every part, whether of reckless gaiety, daring insolence, or natural sentiment: Mr. Farren, in *Prince Bianchi*, was also as efficient as possible. Mrs. W. Barrymore contributed much to the picturesque of the tableaux; and Miss Faucit the heroine, Mr. Vining and H. Wallack as artists. Webster, as an old steward, did every thing that either author or spectators could desire. The music is exceedingly pretty; an opening round very sweet, and a chorus at the end of the first act delightful: among the rest, a song sung by Wallack may be quoted as a theatrical curiosity, which had a charming effect.

"Gentle Zitella,
Whither away?
Love's ritornella
List while I play."

"No, I have linger'd
Too long on my road:
Night is advancing—
The Brigand abroad—
Lonely Zitella
Hath too much to fear:
Love's ritornella
She may not hear."

"Charming Zitella,
Why should'st thou care?
Night is not darker
Than thy raven hair!
And those starry eyes
If the Brigand should see,

Thou art the robber—
The captive is he!
Gentle Zitella,
Banish thy fear—
Love's ritornella
Tarry and hear!"

She enters, and after a pause he sings, with great *éclat*—

"Simple Zitella,
Beware, O beware!
List ye no ditty—
Grant ye no pray'r—
To thy light footsteps
Let terror add wings—
'Tis Massaroni
Himself who now sings—
'Gentle Zitella,
Banish thy fear—
Love's ritornella
Tarry and hear!"

As we observed at the beginning, the scenery (principally by Stanfield) is beautiful.

COVENT GARDEN.

BOILEDIEU's opera, *Les Deux Nuits*, was produced here on Tuesday evening, under the formidable title of *The Night before the Wedding, and the Wedding Night*. The most stupid opera, perhaps, that ever survived a first night in Paris has been rendered a little more lively by the English adapters, and condensed into two acts. Mr. Bishop has added one very sweet air (the first sung by Wood), and two or three other pieces which we could have dispensed with—particularly a ballad about a "Knight with a scarlet plume;" and of the original music, the most effective pieces at Paris failed much in London. On the singing and performances, we do not think it requisite to enter into particulars. Of Mr. Dean, who made his first appearance in the part of *Valentine Acton*, we should have great hopes were it possible for him ever to acquire something like grace or even human nature in his bearing—at present he walks like a cassiowary. There are some fine notes in his voice, and he is evidently a practised musician,—a great rarity on our stage. We, however, despair of his becoming actor enough to be trusted with any part in an English opera. Time, to be sure, works wonders. Of the plot and dialogue, &c. of the piece we can say nothing agreeable, and therefore we will take Denis Brulgrudery's advice, and say nothing at all. The opera was given out for repetition by Mr. Wood amidst considerable uproar, and is not, we should imagine, destined to a very long life.

ADELPHI.

The Sisters, or the Brigands of Albano, by Mr. Buckstone, was produced on Monday. It is founded on the same story in the Keepsake from which the Sister of Charity was taken last summer at the English Opera. Mr. and Mrs. Yates were excellent in their respective parts; and Miss Daly played with great feeling and judgment. O. Smith made a capital brigand; and Buckstone, the ingenious author, was as droll as usual. The melodrama was altogether too long the first night, and went off flatly in consequence; it has since been curtailed, and is becoming a favourite. Yet, we would have nothing but what is *light* at this theatre—except the elephant.

At the Great Room, King's Theatre, there are to be three Italian operas before Christmas. The first representation is to take place on Saturday, 5th December.

VARIETIES.

Natural History.—The Siamese boys, of whom we have heard so much in the papers, are expected in England for exhibition in a

few days. They are eighteen years of age, in perfect health, with great activity of bodies, quickness of intellect, and of cheerful and happy dispositions.

Paris Academy of Sciences.—This Society, at its sitting on Monday last, proceeded to the election of a member to supply the place vacant by the death of M. Pelletan. The candidates were Messrs. Larrey, Roux, Breschet, Lisfranc, and Cloquet: to these, several members added the name of our distinguished countryman, Dr. Edwards. On the first ballot, M. Larrey obtained 19 votes; M. Roux 17; Dr. Edwards 10; M. Breschet 2; M. Cloquet 1; and M. Lisfranc 1. On the second, M. Larrey had 24; M. Roux 21; and Dr. Edwards 6. M. Larrey was consequently elected. The other proceedings were without interest. The election of a member to fill the place vacated by the death of the Count Daru, will take place on Monday next. There are eight candidates.

Natural History.—To give an idea of the number of articles collected by Messrs. Quoy and Gaimart, the naturalists who accompanied the expedition commanded by Captain Durville, it is enough to say, that the Museum of Natural History in Paris can with difficulty contain them; and that, in order to deposit them, it has been necessary to descend into the ground floor of the building, and almost into the cellars; and to divide several of the halls into compartments, to obtain additional room. The result of their investigations of fishes is especially remarkable. Knowing that M. Cuvier was preparing to publish a great work on that subject, they sought for varieties with the utmost care, and discovered a vast number, distinguished by their novelty, and by the splendour of their colours. In contemplating their drawings, it is impossible sufficiently to admire the surprising gorgeousness with which nature has decorated beings destined to live in the depths of the ocean.

We recently noticed Mr. Martin's election as honorary member of the Academy of Arts at Edinburgh; but omitted to state that Mr. W. Kidd was elected at the same time.

Canova.—A complete series of graphic copies from the works of this admirable sculptor is publishing at Venice; it is of a quarto size, appears in parts, each containing four plates, accompanied by textual illustrations, and will be comprised within the space of fifty of such parts. This attempt (and the manner in which it has been hitherto followed up in general merits our commendations) is the first which has been made in Italy to bring Canova's achievements, as a whole, under the public eye. Its value is greatly enhanced by the intrinsic merit of the illustrative matter, the task of providing which has been committed to his bosom friend, Missirini—a writer to whom we are already indebted for an excellent life of the Italian Phidias, and who on the present occasion has judiciously endeavoured to render his illustrations of importance to the artist and amateur, by interspersing them with æsthetic comments. The plates are designed and engraved by various hands, and are highly creditable to their talent; and we doubt not that, if carried on with the same spirit in which they have been begun, the "Opere di Antonio Canova disegnatte ed incise, con illustrazioni di Melchiorre Missirini" will amply repay all the pains and expense that must attend their publication.

Dedications.—It was no uncommon circumstance for authors of the olden times to dedicate their works to the Deity, the Virgin Mary, or our Saviour. Those who were less

piously inclined, or whose physical necessities were more pressing than their spiritual wants, sold the birthright of their independence for a purse of gold. Charles the Fifth appears to have exceeded most modern patrons in liberality, as Petrus Appianus received three thousand gilders (£250) from him as the price of a dedication. Christiansa of Sweden intimated her intention of bestowing a gold chain worth 1000 pistoles on Scudery in approbation of his *Alaric*, provided he struck out his panegyric on Count de la Gardie; but his honesty stood proof against the temptation, and the gold chain never shone across his bosom.

LITERARY NOVELTIES.

Mr. Robert Montgomery, who, at so early an age, has made so powerful a public impression in the highest range of sacred poetry, has in the press (to be published by Maunder) a Poem in Three Books, entitled "Satan."

The principal Memoirs in the fourteenth volume of the Annual Biography and Obituary (for 1830) will be, of Sir William Hoare—the Countess of Derby—Lieut.-Colonel Denham—Sir Humphry Davy—William Shield, Esq.—Sir Edward West—Earl of Harrington—Thomas Harrison (architect)—Sir Brent Spencer—Lord Colchester—Dr. George Pearson—Mr. Terry—Sir David Baird—William Stevenson, Esq.—James Buchanan—Mr. Thomas Bewick—Sir James Abthor Wood—Archibald Fletcher, Esq.—Dr. Wollaston—John Reeves, Esq.—Lord Harris—Mr. Baron Hulloock—William Thomas Fitzgerald, Esq.—Earl of Huntingdon, &c. &c.

Notices of the Brasils in 1828-9, by the Rev. R. Walsh, LL.D., will shortly appear.

A new edition of the Rev. H. F. Burder's Mental Discipline, with many additions, is in the press.

The following are reported to be the principal contents of the forthcoming No. of the Edinburgh Review—Lord King's Life of Locke—Mrs. Hemans's Poetry—French Commercial Policy—Lady Fanshawe's Memoirs—The Byzantine Historians—Utilitarian Theory, and "the Greatest Happiness Principle"—American Literature—Vegetable Physiology; Dutochet, De Candolle, and Mrs. Marcet—Burckhardt's Arabia—Library of Useful Knowledge—M. Cousin's Course of Philosophy—Auldjo's Ascent of Mont Blanc—Flaxman's Lectures on Sculpture—History and Present State of Chemical Science—New French Ministry, &c. &c.

The successful author of the Opening of the Sixth Seal will, it is said, reappear on the first day of the ensuing year in a poem of a novel nature, entitled 1830.

A work by Sir H. Davy, entitled a Vision, written during his last illness, in the playful style of Salmona, is left to his executors for publication. His Life, written by Dr. Parke, is also expected.

Mr. Warburton, M.P., is at present engaged on a Life of Dr. Wollaston.

One volume of Moore's Life of Byron is printed off. It runs to 500 pages quarto. The other is expected to be finished by the first of January.

The next No. of the Family Library (after the Court and Camp) will be the second volume of the Lives of British Painters, including West, Fuseli, Barry, Blake, Opie, and Morland; after that, the concluding volume of Milman's History of the Jews; and then the first volume of the Life of George III., which in its illustrations is said to be far beyond any thing as yet attempted, except Dr. Dibdin's Bibliographical Tour.

The Author of the Revolt of the Bees has nearly ready for publication a poem entitled the Reproof of Brutus.

In the Press.—Delimitations of the North-Western Division of the County of Somerset; with a Descriptive Account of the Antediluvian Bone Caverns in the Mendip Hills, and a Geological Sketch of the District, by John Rutter.—The Nervous System, by Charles Bell, F.R.S., containing his Papers read before the Royal Society, with engravings, and an Appendix of Cases and Consultations illustrating the doctrines advanced in the text.—Ringingsted Abbey, or the Stranger's Grave, with Other Tales, by an Englishwoman.—The first No. of a New Topographical Dictionary of Great Britain and Ireland, by Mr. J. Gordon, editor of the General Biographical Dictionary, &c.

LIST OF NEW BOOKS.

Hunt's Exemplars of Tudor Architecture, royal 4to. 2l. 2s.; India proofs, 3s. 3d.—Miller's Brighton English Grammar, 18mo. 1s. sewed.—Langley's Literary Reader, 12mo. 5s. sheep.—Pritchard on a Vital Principle, 8vo. 7s. 6d.—Taylor's Scenes of Commerce, 12mo. 8s. hf.-bd.—Peake's Cases, Vol. II. royal 8vo. 13s. 6d.—Darley's Familiar Astronomy, 12mo. 7s. 6d. bds.—The British Naturalist, 18mo. 8s. 6d. cloth.—Landseer's Animals, Part I. 4to. 9s.; proofs, imperial 4to. 12s.—Hind's Algebra, 8vo. 10s. 6d. bds.—Williams's Geography of Ancient Asia, 8vo. 9s. 6d. bds.—Affection's Offering, 1830, 4s. bds.—Cowie's Questions on Crombie's Gymnasium, 8vo. 5s. bds.

TO CORRESPONDENTS.

F. E. H.'s verses have nothing peculiarly poetical to recommend them to insertion.

ADVERTISEMENTS

Connected with Literature and the Arts.

KING'S COLLEGE, LONDON.

Public attention being now directed to the expediency of establishing Local or District Schools, as a means of affording a sound and liberal Education, at a moderate expense, to the Sons of Professional and Mercantile Men, and others, the Council of King's College, London, feel it to be their duty to impress in the strongest manner upon the Contributors to such Institutions, the importance of founding them upon those principles which are embodied in the Charter of King's College, as applicable to its Lower Department, and of making religious instruction, according to the Doctrines of the Established Church, an essential part of their course of education. With this view, the Council recommend that the more influential amongst the Clergy and Laity in the populous Districts, where Schools of this description may be thought likely to succeed, should take measures for their early formation, and place them, where it may be deemed expedient, in union with King's College, which will thus form the Centre of a System of Education for the middling Classes of Society, combining the advantages of a judicious and extended cultivation of the intellectual faculties, with the careful inculcation of religious truths and moral duties.

The Council of King's College are ready to receive Applications from District Schools to be taken into union; and they trust that some plan may be devised for offering to Pupils who shall have passed each School, certain Facilities and Advantages, when they are admitted into the Higher Department of the College.

The Council have great pleasure in stating, that District Schools, on Church of England Principles, are in progress of formation in the most populous Parishes, on the banks of the River of London. The Council take this opportunity of announcing that the building of the College is proceeding with all possible despatch, and that it will be opened, both in the Higher and Lower Departments, with as little delay as possible.

By order of the Council,
H. SMITH, Secretary.

2, Parliament Street, Nov. 11, 1830.

DRAWING and PAINTING in WATER

COLOURS. An Artist, principally occupied in Portrait and Miniature Painting, and the instruction of Pupils in Practical and Miniature Drawing, and the instruction of Pupils in the use of the Colours, for which purpose he provides drawing-rooms or two days in the Week to attendance on Pupils.

Particulars may be had by application to Messrs. Harris and

Pierce, Frame Makers, 31, Conduit Street, near Bond Street.

BOOKS PUBLISHED THIS DAY.

Price 3s. half-bound, a 2d edition of
THE POETICAL PRIMER, consisting of
Short Extracts from Ancient and Modern Authors, selected
and arranged progressively for the Use of Children.
By Mrs. LA WRENCE.
Printed for John Murray, Albemarle Street.

Vols. V. and VI. in the pocket size, 6s. being a new edition
of Vol. III. 8vo.
DEATH-BED SCENES, and PAS-
TORAL CONVERSATIONS.
John Murray, Albemarle Street.

"Great was our admiration of the former volume of this work. We can safely recommend our readers to peruse the scenes here described, with an assurance that they are in no respect inferior to those which have already been submitted to the public."—*British Critic*.

"The above work has recently been included in the list of publications recommended by the Society for promoting Christian Knowledge."

Just published,
A Third Volume of Death-Bed Scenes,
(being the same as the above Vols. V. and VI.) in octavo, 12s.

Captain Basil's Travels in North America.
In 3 vols. 12. 11s. 6d.
TRAVELS in NORTH AMERICA, in
1827 and 1828.

By Captain BASIL HALL, R.N.
2. Forty Etchings, from Sketches made in
America with the Camera Lucida, by Captain Hall. Royal 4to. 10s. 6d.
Printed for T. Cadell and Co. Edinburgh; and
Simpkin and Marshall, London.

Fifth Edition of Clapham's Family Sermons.
In 9 large and closely printed volumes, 9s. price 3s. boards.
SERMONS, selected and abridged, chiefly
from the best-known Authors; together with
Translations from Bossuet, Massillon, Monrozier, and other celebrated
French Preachers, both Protestant and Catholic. Adapted generally
to the Epistle, Gospel, or First Lesson; or to the annual
Seasons of the Year.
By the Rev. SAMUEL CLAPHAM, M.A.
Rector of Gussage, St. Michael, Dorset, &c.

The 5th edition.
London: Printed for Baldwin and Crankston.

"The earnest inquiry which has for a long time past been made for a new edition of this work, has induced the author to use his utmost endeavours to present the public with one which shall be more worthy of their attention, and more interesting, than any that preceded it. For this purpose he has rejected many of the sermons that were before given, and substituted others, of which several are from the most eminent French preachers, in which he has endeavoured more completely to adapt to the use of his own countrymen, whether read in families, or delivered in places of public worship. Those from English divines are chiefly selected from St. John, Dr. Lawton, Bishop Richmond, Chalmers, Riddick, Tucker, Dr. Brooke, Eleanore, Bishop Hickman, Rev. Peters, Dr. Scott, Lloyd, Dr. Fowell, &c.; the whole comprising one hundred and thirty-six discourses, adapted to the other holidays as well as Sundays."

In a Series of 21 Plates, price 2l. 7s.
A NUMISMATIC ATLAS OF ANCIENT HISTORY, comprising a Series of 200 Grecian Coins, arranged in the Form of an Historical Chart, designed and executed on Stone,
 By BENJAMIN RICHARD GREEN.

The Work is accompanied by a Descriptive Letter-press, and may be had mounted, to fold up in a case, 2l. 17s.; on a Roller, varnished, 3l. 2s.
 Published by Longman, Rees, Orme, Brown, and Green.

Of whom may also be had,

A Lecture on the Study of Ancient Coins, as connected with History. Illustrated with Plates, price 2s. 6d.

General Anatomy.—Price 6s.

A MANUAL OF GENERAL ANATOMY; or, a Concise Description of the Primitive Tissues and Systems which compose the Organs in Man.
 By A. L. J. BAYLE and H. HOLLARD.

Translated from the French, by H. STORER.
 Printed for John Wilson, 14, Prince's Street, Soho.
 "A good translation of this valuable Manual has been much wanted, and we are glad to see it ably performed in the present instance. Anatomical students are infinitely indebted to Mr. Storer for it."—*Literary Gazette*.

To the Medical Student.—In 8vo. price 10s. boards,
POPULAR ILLUSTRATIONS OF MEDICINE.

By SHIRLEY PALMER, M.D.

London: Printed for Baldwin and Cradock.
 In this work nature and mode of operation of all the various "Existing Causes of Disease," are clearly exhibited and explained; and the Symptoms and Principles of Treatment of many of the more important Disorders which affect the Human Species sketched in language perfectly intelligible to the popular reader; and with such literary references as will recommend the work to the notice of the Medical Student.

In 1 large vol. 8vo. (1800 pages) price 25s.; boards, on fine vellum paper 36s. boards.
BIBLIA HEBRAICA, Editio longè accuratissima.

Ab EVERARD VAN DER HOOFT, V.D.M.
 It has been the particular object of the Publisher to offer to the public a neat and correct copy of the Hebrew Scriptures at a moderate price; and to ensure every attainable degree of accuracy, every page has been independent of the care previously bestowed upon it revised four times after the stereotype plates were cast, by persons familiar with the Hebrew language. The errors which have been discovered in the edition of Van der Hooft have in this been carefully corrected; and the Publisher is determined to avail himself of that security which stereotype printing alone affords, to guard against their recurrence in future.
 Printed for James Duncan, 37, Paternoster Row.

American Annals.

Just received by R. J. Kennett, No. 50, Great Queen Street, Lincoln's Inn Fields.

THE ATLANTIC SOUVENIR for 1830, being the fifth Year of its publication, embellished with beautiful Engravings, and containing 47 original Articles, by the most popular Writers in the United States, bound in Silk, with gilt edges, price 12s. Also,

The Token for 1830, being the third Year of its publication, embellished with Thirteen Plates, and containing 56 original Articles of great interest, elegantly bound in silk, with gilt edges, price 12s.

Of whom may be had,

The former Volumes, and a Catalogue of a recent Importation of American Books.

The Latin Poets, complete in One Volume.

In 1 very large vol. medium 8vo. price 2l. 2s.; or in Six Parts, at 7s. each.

CORPUS POETARUM LATINORUM.
 Edited by W. S. WALKER, Esq.
 Fellow of Trinity College, Cambridge.

The Authors comprised in this volume constitute the whole of the Classical Latin Poets, chronologically arranged, with brief Notices of their Lives.

The Texts of the Corpus Poetarum have not only been selected by the Editor from the best editions; but the Orthography and Punctuation have been by him reduced to a uniform standard. The greatest care has been taken to ensure correctness in the printing.

The peculiar advantages of this edition are, its portability and its cheapness. The whole body of Latin poetry may now lie for reference on the table of the student, in a single volume, printed in a type of great distinctness.

London: Printed for James Duncan, 37, Paternoster Row; Parkes, Oxford; and Deighton and Son, Cambridge.

In 4 vols. 8vo. with a Portrait, price 36s. boards,
THE WHOLE WORKS OF THE MOST
 Rev. Father in God, ROBERT LEIGHTON, D.D.
 Archbishop of Glasgow. To which is prefixed, an entire new Life of the Author.

By the Rev. J. N. PEARSON, M.A.
 Of Trinity College, Cambridge, and Chaplain to the Most Noble the Marquess Wellesley.

"We shall endeavour to supply a few particulars of his life and writings, principally extracted from a spirited and eloquent Memoir prefixed to the new edition, by the Rev. Norman Pearson. It is a reproach to the present age that his valuable writings, breathing as they do the sublimest and purest spirit of piety, rich in beautiful imagery, and sparkling with the most sparkling and simplest elegance, should have been neglected among us."—*British Critic*, October 1805.

Of the above may be had, printed in a small but neat type, and compressed into Two Volumes, price 21s. boards.

Also may be had, separate,

VI. A Practical Commentary upon the First Epistle of St. Peter, and other Expository Works. In 3 vols. 8vo. with Portraits, price 18s. boards.

Compressed into 1 vol. price 10s. 6d. boards.
 Printed for James Duncan, 37, Paternoster Row.

New Edition of Dr. Henry's Chemistry.
 In 9 large vols. 8vo. with Ten Copper-plates, and numerous Woodcuts, price 1l. 14s.
THE ELEMENTS OF EXPERIMENTAL CHEMISTRY.

By WILLIAM HENRY, M.D. F.R.S. &c.
 The 11th edition, comprehending all the recent Discoveries.
 London: Printed for Baldwin and Cradock.

THE ETON COMPARATIVE ATLAS OF ANCIENT AND MODERN GEOGRAPHY, from original Authorities.

By A. ARROWSMITH, Hydrographer to the King. Containing 53 coloured Maps, on a new Plan, is lately published, 2l. 2s. boards; or 2l. 15s. full coloured and half-bound. The Work is accompanied by a Set of Skeleton Outlines for Copying, and an Index of all the ancient Names.

"It is a work of the most essential service to the every man of liberal education, and worthy of introduction into every respectable school in the kingdom."—*New Monthly Magazine*.

Just published, reduced from the above,
Arrowsmith's Atlas of Ancient Geography, for the Use of Schools, containing 35 coloured Maps, and an annotated Index of all the Names, 15s. half-bound. To be had of the Author, Soho Square; at the Atlas Warehouse, Red Lion Court, Fleet Street; and at all Booksellers.

Works published during the Week by Longman, Rees, Orme, Brown, and Green, London.

EXEMPLARS OF TUDOR ARCHITECTURE, adapted to Modern Habitations; with Illustrative Details, selected from ancient Edifices; and Observations on the Furniture of the Tudor Period.

By T. F. HUNT, Architect.
 Author of "Half-a-Dozen Hints on Picturesque Domestic Architecture," &c. &c.

In royal 4to. with 27 Plates, price 2l. 2s.; or with Proofs of the Plates on India paper, price 3l. 2s.

"We must confess a deep debt of pleasure and gratitude to him for the very interesting local, literary, scientific, and general information with which he has adorned that which in ordinary hands would have been a dry dissertation."—*Literary Gazette*, Nov. 14, 1829.

Dr. Arnott's Elements of Physics; or, Natural Philosophy, (elemental and Medical, Vol. II. Part I. comprehending the Subjects of Heat and Light. In 8vo. with numerous Wood Engravings, 10s. 6d. boards. Also,

A Fourth edition of Vol. I. among the Additions to which is a complete Exposition of the Nature and easy Cure of the Defect of Speech called Stuttering.

Traditions of Lancashire. By J. Roby, M.R.S.L. In 2 vols. royal 8vo. with Proofs of the Plates on India paper, price 4l. 4s.; or with Proofs and Etchings, on India paper, 4l. 14s. 6d.

"A work which must be seen to be estimated as it ought. It is well calculated to adorn the libraries in every corner of the kingdom."—*Literary Gazette*, Oct. 17, 1829.

Historical Account of Discoveries and Travels in North America, &c. by Hugh Murray, Esq. F.R.S.E. Author of "Historical Account of Discoveries and Travels in Africa, Asia," &c. In 2 vols. 8vo. with a Map, 37s. boards.

The Venetian Bracelet; or the Lost Pleiad; a History of the Lyre; and other Poems. By L. E. L., Author of the "Improvisatrice," &c. In 1 vol. foolscap 8vo. 10s. 6d. bds.

"We find in this new publication only another enchanting proof of female genius, original, varied, delightful, and exalted."—*Literary Gazette*, Oct. 3, 1829.

Personal Narrative of Travels to the Equinoctial Regions of the New Continent, during the Years 1799—1804. By Alexander de Humboldt and Aimé Bonpland. Translated into English by Helen Maria Williams. Vol. VII. in 8vo. price 14s. boards.

Beatrice; a Tale, founded on Facts. By Mrs. Holland. In 3 vols. 12mo. price 1l. 1s. boards.

"In laying down Mrs. Holland's works, we feel it is an equal pleasure and justice to say, we cordially approve and warmly recommend them. Restricted as we are, we still think, one of her most successful productions."—*Literary Gazette*, Oct. 31, 1829.

Archbishop Secker's Lectures on the Catechism, arranged in Questions and Answers, for the Use of Schools and Families. In 12mo. price 4s. 6d. bound.

The Architectural Antiquities of Great Britain, by John Britton, F.R.S. &c. In 4to. Part XIII. 1l. 10s.

This Part, which completes the work, contains Nineteen Engravings, and forms the third part of the 6th volume, or Chronological Series.

A Compendium of the English Flora of Sir James E. Smith, F.R.S. President of the Linnean Society, &c. &c. In 12mo. price 7s. 6d. cloth boards.

In post 8vo. bound on India paper, 9s.; Proof on imperial 4to. 30s. In a Portfolio. A very few Proofs before letters, 2l. 2s.

The New-Year's Gift, and Juvenile Souvenir, for 1830. Edited by Mrs. A. Watts. With numerous Line Engravings. Elegantly half-bound in Turkey morocco, with gilt leaves, price 8s.

Price 2s. dedicated to Professor Wilson.

THE JUVENILE KEEPSAKE for 1830.
 Edited by T. MOSCOP, Esq.

Embellished with numerous Line Engravings, under the superintendence of Mr. Charles Heath. The Contents, by some of the most favourite and distinguished Writers for Youth, are enlarged to Sixteen Sheets of Letter-press, forming one of the most beautiful works of its class.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

THE KEEPSAKE for 1830.
 This splendid Annual contains a Five-Act Romantic Drama, with Songs, by Sir Walter Scott; besides Letters from Lord Byron to several Friends.

London: Published for the Proprietor, by Hurst, Chance, and Co. St. Paul's Churchyard; and R. Jennings, Chesham.

In 4 vols. 12mo. price 1l. 4s.
BELMONT'S DAUGHTER; a Fashionable Novel.

By MISS M'LEOD,
 Author of "Tales of Ton," "Gerardine Murray," "Principle," &c.

Printed for A. K. Newman and Co. London.

Where may be had, published this Autumn,
Fitzwalters, Barons of Chesterton, 4 vols. 1l. 4s.

Mystic Events; or, the Vision of the Tapestry, 4 vols. 1l. 4s.

Freebooter's Bride; or, Black Pirate of the Mediterranean. 5 vols. 1l. 7s. 6d.

Price Half-a-Guinea,
SERMONS on some of the FUNDAMENTAL TRUTHS OF CHRISTIANITY.

By THOMAS VOWLER SHORT, B.D.
 Student of Christ Church, and Rector of Kings Worthy, Hants. Oxford: Printed for J. Parker; and C. and J. Rivington, St. Paul's Churchyard, and Waterloo Place, London.

In 8vo. Illustrated by Six Plates, 7s. 6d. boards,
A TREATISE on the NATURE and CURE OF INTESTINAL WORMS OF the HUMAN BODY, arranged according to the Classification of Rudolphi and Brenner, and containing the most approved Methods of Treatment, as practised in this Country and on the Continent.

By WILLIAM RHIND,
 Surgeon, Member of the Royal Medical and Royal Physical Societies, Edinburgh.

"The work appears, on the whole, to be a faithful digest of all which it is important for the practitioner to know on the subject of human helminthology. It has been executed with sufficient attention to anatomical and descriptive details, yet without an excess of scientific refinement and prolixity, so that we doubt not but it will prove popular and practically useful."—*Edinburgh Medical Journal*.

"It would be but an equivocal compliment to say that Mr. Rhind's Treatise contains more information than any previous work upon intestinal worms, after having stated that hitherto this subject has been much neglected in this country. The practical inquirer will find in this essay a satisfactory account of all that is known upon the subject."—*London Medical and Physical Journal*.

Printed for Samuel Highley, Fleet Street, London; and Oliver and Boyd, Edinburgh.

Messrs. Colburn and Bentley have just published the following New Works:—

DR. EDMUND CALAMY'S HISTORICAL ACCOUNT OF HIS OWN LIFE AND TIMES, now first printed from the original MS. In 2 vols. 8vo. with Portraits.

2. Memoirs of Bokwar, President Liberator of the Republic of Colombia. 3 vols. post 8vo. with Portraits.

3. Memoirs and Correspondence of Thomas Jefferson, late President of the United States. In 2 vols. 8vo. with Portraits.

4. Tales of a Briefless Barrister. In 3 vols. post 8vo. 37s.

5. Lieut. Hardy's Travels in the Interior of Mexico, in 1827, 1828, and 1829. In 1 vol. 8vo. with Map and numerous Illustrations, 15s.

6. Tales of my Time, by the Author of "Blue Stocking Hall." In 2 vols. post 8vo. 25s. 6d.

7. Lieut. Rose's Travels in Southern Africa, 1 vol. 8vo. 10s. 6d.

8. Stories of a Bride, by the Authoress of the "Mummy." 3 vols. 25s. 6d.

9. The Life of a Midshipman. In 1 vol. 8vo. 9s. 6d.

10. Dr. Doddridge's Private Correspondence. In 2 vols. 8vo. with fine Portraits.

11. Stories of Waterloo. In 3 vols. 28s. 6d.

12. Tales of an Indian Camp, 3 vols. post 8vo. 31s. 6d.

In a few days,
13. The Exclusives, a Novel. 3 vols.

14. Travels in the East, by John Carne, Esq. Author of "Letters from the East," printed uniformly with that work. In 1 vol. post 8vo. 10s. 6d.

15. Private Memoirs of the Court of Louis XVIII. By a Lady. In 2 vols.

16. The Poetical Works of the Rev. George Croly. 2 vols. post 8vo. (Nearly ready.)

In 3 vols. post 8vo. price 1l. 10s. with a full-length Portrait of the Author, engraved by Hall, after a Drawing by Wageman, the 2d edition of

MEMOIRS OF the EXTRAORDINARY MILITARY CAREER OF JOHN SHIFF, late a Lieutenant in his Majesty's 67th Regiment.

Written by HIMSELF.

This Work, the first edition of which, consisting of 1000 copies, has been sold in a few months, has been carefully re-edited, considerably enlarged and improved, and much novel and important matter has been substituted for what was less interesting. The attention of Military Officers is particularly requested to the observations on the important subject of Corporal Punishment in the British Army, and the Practical Hints to Young Subalterns (now first printed), which occupy several chapters of the work.

For literary notices of the first edition, see the *Atlantic Journal*, the *Oriental Herald*, the *United Service Journal*, and the *Monthly Review*, for February, 1829; the *Literary Gazette*, the *Weekly Review*, the *Spectator Newspaper*, &c. &c.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

EGYPTIAN HIEROGLYPHICS. The Four Fasciculi of Egyptian Hieroglyphics by the late Dr. Thomas Young, of which the first two were printed in conjunction with the Egyptian Society, and the Continuation, the last two, under the auspices of the Royal Society of Literature, are now to be prepared, price Eight Guineas, at J. Murray's, Albemarle Street, the publisher to the R.S.L.; or at the Apartments of the Society, No. 3, Parliament Street, where, also, Members are entitled to receive their Copies at half the above price. These Fasciculi greatly elucidate the progressive discoveries which are making in ancient Egyptian and Sacred History; and the Committee of the R.S.L. have directed the Fifth Fasciculus (also a very important one, selected from Dr. Young's posthumous Papers, and consisting, like the preceding Parts, of Twenty Lithographed Plates) to be prepared for immediate publication.

On the 1st of October was published, price 6s. the Twelfth Number of
THE BRITISH CRITIC, QUARTERLY THEOLOGICAL REVIEW, and ECCLESIASTICAL RECORD.

Contents.—Church Reform—Cox's Memoirs—Wrangham's Propositions—Oliver on the Antiquities of Beverley—Memoirs of Lady Fanshawe—Dr. Ure's System of Geology—Life and Times of Archbishop Laud—Rose and Pusey on Rationalism—Le Bas's Sermon—Festival of the Sons of the Clergy—Count Pizzo on the Emancipation of the Protestant Vassals of Piedmont—Bath's Sermon—State of the Dioceses—Proceedings of the Universities. Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

The First Five Volumes may now be had complete, price 12s. each, in boards. Also,

The Four Volumes of the Quarterly Theological Review, for the Years 1825 and 1826, price 21. 6s. boards; or any Number at 6s.

In 1 vol. 8vo. price 10s. 6d.
HISTORY of the PROGRESS and SUPPRESSION of the REFORMATION in SPAIN in the SIXTEENTH CENTURY.

By THOMAS MCCRIE, D.D.
Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

Of whom may be had, by the same Author,

1. History of the Progress and Suppression of the Reformation in Italy during the Sixteenth Century, including a Sketch of the History of the Reformation in the Grisons. 8vo. 10s. 6d.

2. The Life of John Knox, 2 vols. 8vo. (A new edition preparing.)

3. The Life of Andrew Melville, 2d edition, 8 vols. 8vo. 11. 4s.

Just published by D. A. Taggart, Oxford. Sold by Longman, Rees, Orme, and Co. London; and at Edinburgh.

In 8vo. price 15s. cloth boards,
A MANUAL of ANCIENT HISTORY,

considered in relation to the Constitutions, Commerce, and Colonies of the different States of Antiquity.
By A. H. L. HEEREN,
Professor of History in the University of Göttingen.

This Manual, for which we are indebted to one of the most distinguished scholars of Germany, and which has been adopted as a text book in most of the continental universities, comprises the history of the ancient states of Asia and Africa, of Greece and Rome, from the earliest times to the final subversion of the Roman empire in the west. It contains also a geographical outline of the great divisions of the globe, and of the separate countries treated of; and to each section of the work is appended a catalogue raisonné of the best works on the subject. The facts are carefully but clearly narrated in chronological order, the constitutions of the numerous states are described, traced to their origin, and their progressive changes pointed out and accounted for with sagacity and skill; and the whole is interspersed with such acute remarks and judicious questions, as cannot well fail to force the attention upon those important events in ancient history which are most interesting to the politician, the historian, and the philosopher.

In 1 vol. 8vo. 10s. 6d. boards,

A Sketch of the Political History of Ancient Greece. By A. H. L. HEEREN, Professor of History in the University of Göttingen, &c. translated from the German.

The historical works of Heeren have had a remarkable success in Germany. They are recommended by the eloquence of their style, the liberality of their views, and by the parity and elevation of their moral doctrines. As a writer he is always ingenious, generally instructive, and sometimes original and convincing.

Shortly will be published, beautifully printed, 4 vols. foolscap 8vo. price 11. extra boards,

The Miscellaneous Works, in Prose and Verse, of Joseph Addison. A new edition, with a Sketch of the Author's Life, and his Letters, now first collected.

The same, large paper, beautifully printed in crown 8vo. on a fine thick paper, only a small number printed, 11. 12s.

"Whoever wishes to obtain an English style, familiar but not coarse, and elegant but not ostentatious, must give his days and nights to the volumes of Addison."—*Dr. Johnson.*

These volumes, with the exception of his papers in the Spectator, Tatler, Guardian, and Freeholder, contain the whole works of Mr. Addison, both in verse and prose; they are therefore printed to match in size the various editions of the British Essayists, edited by Chalmers, Fargues, &c.

In 8vo. price 12s. boards,
AN INTRODUCTION to GEOLOGY:

comprising the Elements of the Science in its present advanced State, and all the recent Discoveries. With an Outline of the Geology of England and Wales. 3d edition, entirely re-composed and greatly enlarged, with new Plates, a coloured Map, and Cuts.

By ROBERT BAKERWELL.
Professor Silliman, who is now superintending a reprint of this edition in America, (*Philosophical Mag.* Oct.) states his opinion, that it is the most intelligible, attractive, and readable work on geology in the English language.

Printed for Longman, Rees, Orme, Brown, and Green.

In 2 vols. price 12s. in coloured boards, tastefully designed, a 2d edition, embellished with Thirty Portraits of eminent Characters.

LACONICS; or, the best Words of the best Authors: with the Authorities given.

"The title of this work is so good as almost to render explanation superfluous. It is one which may be taken up occasionally, and a little read at a time with pleasure and profit; and so managed, may well last one's life without weariness. It is the result of a most extensive reading, assisted by a nice perception of merit."—*Examiner.*

London: Sustenance and Stretch, 14, Percy Street, Bedford Square.

Waverley Novels, New Edition.

ROB ROY, Vol. I.; or forming Vol. VII. of the new edition of the Waverley Novels, will be published on 1st December.

This Novel, besides a long Introduction, containing a history of Rob Roy, is beautifully illustrated by Davenport and Shenton, from designs by Chalon and Kidd.
Printed for Cadell and Co. Edinburgh; Simpkin and Marshall, London; and all Booksellers.

Of whom may be had,

All the preceding Volumes, which are again Reprinted.

Rob Roy, Vol. II. will be published on the 1st of January, 1829.

Nearly ready, and to be had as above,

Tales of a Grandfather; Third Series. By Sir Walter Scott, Bart.

The Horse.

Price 6d. each, No. I. and II. of

THE FARMER'S SERIES of the LIBRARY of USEFUL KNOWLEDGE, being the Commencement of a complete Account of the Horse, which will comprise its History, various Breeds, Anatomical Structure of each Variety, Diseases, with their Prevention and Cure, Breeding, Training, &c. The first two Numbers contain beautiful and authentic Portraits of some of the most celebrated Horses, intended not merely for Embellishment but for Illustration.

London: Published under the superintendence of the Society for the Diffusion of Useful Knowledge, by Baldwin and Cradock, Paternoster Row.

"The Farmer's Series will embrace—1st. Every Description of Live Stock—their Varieties, Food, and Management—Breeding—Diseases—their Prevention and Remedies—2d. The General History of Agriculture, including every Kind of Husbandry, with Buildings, Machinery, Roads, Plantations, Timber, &c.—3d. Domestic Economy, including the Dairy, Brewing, Wine and Cider, Baking, Curing Meat, &c.

In 8vo. price 12s. boards, the 2d edition of
SERMONS on some of the LEADING PRINCIPLES of CHRISTIANITY.

By PHILIP NICHOLAS SHUTTLEWORTH, D.D.
Warden of New College, Oxford, and Rector of Foston, Wilts.
Printed for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

Of whom may be had, by the same Author,

A Paraphrastic Translation of the Apostolical Epistles, with Notes. 8vo. 12s.

BOOKS IN THE PRESS.

Mr. Hood's Comic Annual.
In a few days will be published, and, by permission, to Sir Francis Freeling, price 1s. half-bound in morocco, and illustrated with an immense number of Wood Engravings.

THE COMIC ANNUAL.

By THOMAS HOOD, Esq.
"Christmas, indeed, seems a tide more adapted for rowing in the gig or the jolly, than tugging in the barge or the galley, and accordingly I have built my craft."

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

On the 25th current will be published, in 12mo. illustrated by Ten Engravings, 6s. boards,

STUDIES in NATURAL HISTORY, exhibiting a popular View of the most striking and interesting Objects of the Material World.

By WILLIAM RHIND.

Member of the Royal Medical and Royal Physical Societies of Edinburgh.

Contents.—General Introductory View of the System of Nature; the Advantages of the Study—Reproductive Powers of Nature—Geology—Formation of the Earth—Advantages of the Irregular Surface of the Globe—the Atmosphere—Winds—Thunder—Storms—Monsoons—Vegetation—Rivers—General Outline of Rivers—an Autumn Day—Vegetables—their Structure, Cultivation, and Diseases—Birds—their Migration—Song Birds—the Ocean; Cause of its Swellings—Fishes—Insects; general View of their Habits and Instincts—Economy of Bees and of Ants—Winter—the Celestial System—General Effects of a Change of Seasons—Man as compared to the inferior Animals—the City and the Country—Conclusion.

Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

In a few days will be published, with Engravings and a Map, 4to. 6s. 6d. lettered

STORIES of TRAVELS in TURKEY; with an Account of the Manners and Customs of the Inhabitants of Constantinople, and a Description of that interesting City, founded upon the Narratives of Macfarlane, Madden, Walsh, Frankland, Androsky, and other recent Travellers. With a Geographical and Historical Sketch of the Empire.
London: Published by Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Of whom may be had,

Stories of Travels in South America. With Plates.

"The plan of this little work is excellent."—*Literary Gazette.*

"Although the oldest may peruse these stories with profit and pleasure, yet they are in a particular manner suited to the young; and to them we would strongly recommend them."—*Morning Journal.*

New Literary Periodical.
On Wednesday, the 8th of January, 1829, will appear, No. I. of
THE FOREIGN LITERARY GAZETTE, and WEEKLY EPITOME of CONTINENTAL and DOMESTIC SCIENCE, LITERATURE, ARTS, &c.

To be continued on every succeeding Wednesday.
At a period when the minds of men throughout the civilized world are ardently turned to the cultivation of the sciences,—when education, and its concomitant, literature, are generally diffused,—and when discoveries and improvements are almost daily the result of this auspicious state of things,—it is not surprising that a multitude of organs should offer themselves to disseminate among the public the accessions to knowledge as they continually arise. The periodical press has, under these circumstances, become more than ever a powerful and a valuable medium for conveying that information which the enlightened and inquisitive spirit of the age demands; and it is not too much to say, that, in its general character, it ably and satisfactorily supplies what is required. Many journals, and publications of every form and class, convey intelligence of every kind to their readers, from the common news of the day to the most elaborate researches into questions of great path and moment. Curiosity is gratified, food is furnished for the mind, the understanding is enlarged, and the whole social body is refined, by this rapid circulation of instruction; and it may be affirmed, that the glorious art of printing thus exercises an influence of incalculable benefit on the best interests of mankind, and far exceeding that of any former time.

To add another useful member to this circle, and supply a want which is still very obviously felt, are the objects of the "Foreign Literary Gazette." It cannot escape observation, that, however numerous and efficient are the works devoted to elucidate the progress of our own literature, and arts, there are but few which endeavour to direct attention to those of other countries. Imperfect and incidental notices are all that have, until very lately, been bestowed by English writers on the immense and stirring mass of intellect which pervades the Continent of Europe, and is now rapidly extending to the New World. We, in our insular position, hardly learn, and that tardily and at long intervals, what is continually achieving by the active mind of Germany, of Italy, of France, of Russia, of America, and of other nations; and, owing to this partial ignorance, we lose the advantage of being instructed from a timely acquaintance with the ideas and suggestions of contemporary writers in distant lands, are exploring the paths of learned, scientific, and philosophical inquiry,—paths in which an accidental hint or remark so often leads to the most important results that can add to the accumulation of knowledge and happiness of the human race. The "Foreign Literary Gazette," therefore, purports to combine within the compass of a weekly sheet, (the form of which renders it susceptible of great rapidity both in receiving and in diffusing,) whatever the skill, the learning, the industry, and the genius of individuals or communities abroad may be bringing forth for the delight and welfare of mankind. In order to execute this responsible undertaking in an honourable manner, as preparatory pains, labour, and expense, have been spared. Connected with the most powerful Bookellers in London, having established, literally throughout Europe, a correspondence with contributors of the highest attainments; being perfectly independent, and with simple means to command, as our competitors, still less extensive resources, the directors of this publication are confident of producing a work at once more interesting to the general reader, and replete with information to the student of science and the scholar. In short, will strive to present that literary and scientific pursuit of human knowledge, and to impart a distinct idea of their civilization and progress, and to rapidly as often to protect their own periodicals.

The Contents will be chiefly
Reviews of New Works, Science, Painting, and Architecture.
Transactions of the leading Literary, &c. Societies.
Original Essays on Subjects of immediate Importance.
Voyages, Travels, &c.
Biography, Necrology, &c.
Antiquities, Natural History, &c.
State of the Arts, &c.
And Improvements in Mechanics, Commerce, Navigation, Manufactures, &c.

To be published in London by W. A. Scripps, 7, Wellington Street, Strand, and by Dulau and Co. 20, St. John's Square, or where Orders for the "Foreign Literary Gazette" and Communications for the Editors may be sent.

A list of those who would embrace the names of nearly all the most distinguished scholars and literati of Europe; men the most eminent in every branch of literature and science than Naples to Petersburg.

On Monday, the 8th inst. will be published, price 6s. small 8vo. illustrated with a handsome Vignette Title, engraved by Paden, the First Volume of

DR. LARDNER'S CABINET CYCLOPEDIA; being the first volume of a History of Scotland, in 3 vols.

By SIR WALTER SCOTT, Bart.

Printed for Longman, Rees, Orme, Brown, and Green, Paternoster Row; and Taylor, Gower Street.

The most eminent Characters of the Age in every department of Literature, Science, and Art, are engaged to co-operate in this Cyclopaedia. For the names of some of the distinguished Contributors, and other particulars, the Public are referred to the Prospectus, which may be had at all the Booksellers.

On the 25th of November will be published, in 2 vols. 8vo. with 14 Plates, price 11. 7s. bound in cloth,

ANNALS of the PENINSULAR CAMPAIGNS, from 1808 to 1814.

By the Author of "Cyril Thornton."
Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

Of whom may be had,

The Youth and Manhood of Cyril Thornton 2d edition. 2 vols. 12mo. 11. 1s.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Strand, and by Dulau and Co. 20, St. John's Square, or where Orders for the "Foreign Literary Gazette" and Communications for the Editors may be sent.

No. 671.

SATURDAY, NOVEMBER 28, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Dr. Lardner's Cabinet Cyclopædia, Vol. I.
Sir Walter Scott's History of Scotland.

OUR happiness, to be permanent and unalloyed, must spring from a well-directed cultivation of the head and heart. Every effort, therefore, in the diffusion of knowledge to which intelligent curiosity gives birth, should be cheered by the well-wisher of his species; and, as a consequence, he should also hail every improvement in the machinery of intelligence as a new engine for elevating man's moral nature.

Fortunately, these are no longer closet truths. The vastly important fact, that what improves or offends the understanding must at the same time elevate or taint the heart, is now felt and acknowledged, and, what is far better, is acted upon, by all ranks of society. Witness the eagerness with which every cheap and accessible compendium of useful knowledge is welcomed by every class of readers; witness the extensive circulation of our own *Literary Gazette*; and witness also the examples that are offered in the books published by the Society for the Diffusion of Knowledge—in Mr. Murray's Family Library—and in other similar publications: and we will predict the same of the great undertaking of which the first volume now lies before us.

We advisedly call the *Cabinet Cyclopædia* a great undertaking, because we consider, that in its effects on the tone and habits of thought of what is known by the phrase "the reading public," it will be, if carried through in the spirit of its projection and commencement, one of the most invaluable productions of modern literature. A recollection of the extraordinary change effected in the public mind of France by the *Encyclopédie*, will help to explain our meaning; and it may not be too much to anticipate, that the effects of such works as the *Cabinet Cyclopædia*, on the character of the passing and next generation, will be the conversion of the readers of romance into students of history, and of the lovers of fiction into observers of nature.*

A very brief statement of the means and end of this new publication will, we are inclined to believe, bear us out in our opinion. The *Cabinet Cyclopædia* is definite and integral in its scope:—for though each separate volume or treatise will be independent or perfect in itself, it will be connected with the rest, not only by the relationship which every compartment or branch of science, art, and literature, bears to another, but also by the cyclopædic tie of unity of design—the furnishing a "popular compendium of whatever is useful, instructive, and interesting in human knowledge." The prospectus states, that "each volume will contain one or more subjects uninterrupted and

unbroken, and will be accompanied by the corresponding plates or other appropriate illustrations. Facility of reference will be obtained without fettering the work by a continual alphabetical arrangement. A subscriber may omit particular volumes or sets of volumes, without disintegrating his series. Thus each purchaser may form from the *Cabinet*, a *Cyclopædia* more or less comprehensive, as may suit his means, taste, or profession. If a subscriber desire to discontinue the work at any stage of its publication, the volumes which he may have received will not lose their value by separation from the rest of the work, since they will always either be complete in themselves, or may be made so at a trifling expense. The purchasers will never find their property in this work destroyed by the publication of a second edition. The arrangement is such that particular volumes may be re-edited or re-written without disturbing the others. The *Cabinet Cyclopædia* will thus be in a state of continual renovation, keeping pace with the never-ceasing improvements in knowledge, drawing within its circle from year to year whatever is new, and casting off whatever is obsolete, so as to form a constantly modernised cyclopædia."

But these advantages, eminent as they undoubtedly are, are not the sole nor the chief recommendations of the *Cabinet Cyclopædia*. Neither is it on the extreme cheapness of the publication, or the federal independence—if we may so speak—of its several volumes, that we rest our prediction of its influence on the tone of thinking of the present, and on the literature of the next generation,—but on the promise, amounting almost to a moral certainty, of the great excellence of its execution. A multitude of persons eminent in literature and science in the United Kingdom are employed in this undertaking: and, indeed, no others should be employed in it; for it is a truth that the profound and practised writer alone is capable of furnishing a "popular compendium"—that is, of combining the two qualities of being universally intelligible and strictly scientific. Hitherto the character of popular treatises has been superficialness and unintelligibility—for the simple reason, that they have too generally been the productions of the superficial and unpractised in composition, as our school-books sadly testify. Were it only, then, by its supplying what has long been felt a desideratum of the first magnitude, a sound and intelligible treatise fit for schools, the *Cabinet Cyclopædia* will be heartily welcomed by all interested in the instruction of youth. What parent or guardian that throws his eye over the list of its contributors but must be rejoiced by meeting the names of those who are in themselves a guarantee of intellectual and moral excellence? Who, for example, of all men living, is best fitted to write a popular History of Scotland, which, from its inimitable simplicity and moral charm of its style, may be safely put into the hands of a child—and which, from its profound accuracy, cannot be read without instruction by the student of a

more advanced age;—who but Sir Walter Scott? and, accordingly, we find the "*Cabinet*" *History of Scotland* by that illustrious writer. Who, we might also ask, could be mentioned in the same breath with Sir James Mackintosh for writing the popular History of England? And from whom could the History of Ireland come so recommended as from the pen of Mr. Moore? The several departments of mathematical science and natural history, on the other hand, furnish an equally splendid list of contributors, or rather an equally luminous illustration of the divisions of intellectual labour. Who, for instance, so competent to treat of the several great branches of mathematical and mechanical science as a Brewster, a Brinkley, a Herschel, a Kater, a Lardner, or a Pond (the astronomer royal), a Sabine, and a whole host of other ornaments of their age and country, whom we find among the contributors to the *Cabinet Cyclopædia*? Again, if we look to the Natural History department we shall see the most distinguished naturalists and zoologists of the day furnishing treatises which cannot fail to create where it does not already exist—and to strengthen where it does—a relish for the study of natural history, which of all others is perhaps the most fascinating, and the best fitted to lead the mind to

"Look from nature up to nature's God."

But to return to the volume before us, the *History of Scotland*, by Sir Walter Scott, which we do not hesitate to declare will be, if possible, more extensively read than the most popular work of fiction of the same prolific author;—and for this obvious reason: it combines with much of the brilliant colouring of the *Ivanhoe* pictures of bygone manners, and all the graceful facility of style and picturesqueness of description of his other charming romances—a minute fidelity to the facts of history, and a searching scrutiny into their authenticity and relative value, which might put to the blush Mr. Hume and other professed historians. It is this rare union of the closest adherence to sober reality, with the panoramic description of the *Waverley Novels*, that will constitute the great attraction of the present volume. Such is the magic charm of Sir Walter Scott's pen, it has only to touch the simplest incident of every-day life, and it starts up invested with all the interest of a scene of romance; and yet such is his fidelity to the text of Nature, that the knights, and serfs, and collared fools, with whom his inventive genius has peopled so many volumes, are regarded by us not as mere creations of fancy, but as real flesh and blood existences, with all the virtues, feelings, and errors of commonplace humanity. This great charm of style, however, is not without its disadvantages. In the present instance we fear it may induce those unable to appreciate the profound research of which every page in the volume reminds the historical student, to regard the graphic sketches of manners and personal character with which it abounds, but as parts of a fantastical pageant of romance, like those so

* Be it remembered, however, that we are not, and never have been, the advocates for all things grave and solid, at the expense of amusing and imaginative literature. We rather adhere to the old saw, that All work and no play makes Jack a dull boy.

vividly painted in the pages of *Ivanhoe* and the *Tales of the Crusaders*. It would appear, indeed, that Sir Walter had himself entertained some apprehensions on this score—for he seems to have entered upon the work with a resolution to be as subdued and matter-of-factish (we beg pardon for using the term) as the romantic history of Scotland could permit him—so as to guard against the accusation of having only given birth to another series of the *Canongate Chronicles*. In spite of this wise precaution, however, the magic of his style, like the nationality of his feelings, breathes through the entire volume, more particularly as the interest of his subject thickens upon his imagination, from the struggles of the Bruce to the fatal field of Flodden.

Sir Walter wisely passes over the fables of Hector Boethius—sanctioned though they have been by George Buchanan—concerning the early history of Scotland, without even a notice, and commences with the campaigns of Agricola and Severus. Mr. Pinkerton's anti-Celtic Euxine *peuk* origin of the Picts—the subject of so much angry controversy—meets with the like punishment of utter silence.

The falsification of history for the sake of effect, or for less excusable motives, by poets and novelists, is a charge to which Shakspeare is more obnoxious than Sir Walter Scott himself. It is a charge to which Shakspeare is also liable, from a too ready adoption of the fables and misrepresentations of the old *Chronicles*, as the reader will see in the following remark on the fate of the "gracious Duncan," who fell by the dagger of Macbeth. "On reading these names," observes our author, "every reader must feel as if brought from darkness into the blaze of noonday; so familiar are we with the personages whom we last named, and so clearly and distinctly we recall the events in which they are interested, in comparison with the doubtful and misty views which we can form of the twilight times before and after a fortunate period. But we must not be blinded by our poetical enthusiasm, nor add more than due importance to the legends, because they have been woven into the most striking tale of ambition and remorse that ever struck awe into a human bosom. The genius of Shakspeare having found the tale of Macbeth in the Scottish chronicles of Holinshed, adorned it with a lustre similar to that with which a level beam of the sun often invests some fragment of glass, which, though shining at a distance with the lustre of a diamond, is by a near investigation discovered to be of no worth or estimation. Duncan succeeded to Kenneth II. in 1033: he reigned only six years. Macbeth, his near relation, also a grand-child of Malcolm II., though by the mother's side, was stirred up by ambition to contest the throne with the possessor. The lady of Macbeth also, whose real name was *Graoch*, had deadly injuries to avenge on the reigning prince. She was the grand-daughter of Kenneth IV., killed in 1003, fighting against Malcolm II.; and other causes for revenge animated the mind of her who has been since painted as the sternest of women. The old annalists add some instigations of a supernatural kind to the influence of a vindictive woman over an ambitious husband. Three women, of more than human stature and beauty, appeared to Macbeth in a vision, and hailed him successively by the names of thane of Cromarty, thane of Moray, which the king afterwards bestowed on him, and king of Scots, which inspired him with the seductive hopes so well expressed in the drama. Macbeth broke no law of hospitality in his attempt on Duncan's

life. He attacked and slew the king at a place called Bothgowan, or the Smith's House, near Elgin, in 1039, and not, as has been supposed, in the castle of Inverness. The act was bloody, as was the custom of the times; but, in very truth, the claim of Macbeth to the throne, according to the rule of Scottish succession, was better than that of Duncan. As a king, the tyrant so much exclaimed against was, in reality, firm, just, and equitable. Apprehension of a party which Malcolm, the eldest son of the slaughtered Duncan, had set on foot in Northumberland, and still maintained in Scotland, seems, in process of time, to have soured the temper of Macbeth, and rendered him formidable to his nobility. Against Macduff, in particular, the powerful Maormor of Fife, he had uttered some threats which occasioned him to fly from the court of Scotland. Urged by this new counsellor, Siward, the Danish earl of Northumberland, invaded Scotland in the year 1054, displaying his banner in behalf of the banished Malcolm. Macbeth engaged them in the neighbourhood of his celebrated castle of Dunsinane. He was defeated, but escaped from the battle, and was slain at Lumphanan in 1056. Very slight observation will enable us to recollect how much this simple statement differs from that of the drama, though the plot of the latter is consistent enough with the inaccurate historians from whom Shakspeare drew his materials. It might be added, that early authorities shew us no such persons as Banquo and his son Fleance, nor have we reason to think that the latter ever fled further from Macbeth than across the flat scene, according to the stage direction. Neither were Banquo or his son ancestors of the house of Stuart. All these things are now known; but the mind dwells pertinaciously on the impression made by the impositions of genius. While the works of Shakspeare are read, and the English language subsists, History may say what she will; but the general reader will only recollect Macbeth as a sacrilegious usurper, and Richard as a deformed murderer."⁶

From the ascent of Duncan, A. D. 1034, to the death of David II. in 1371, Sir Walter chiefly follows Lord Hailes's *Annals* as his guide, than whom, as he remarks himself elsewhere, a better and surer will never be supplied. From that period there is no loss for materials, but great need of sagacity in using them. Without further remark, we shall quote a few passages which we think will interest the reader, while they will exhibit the spirit in which the volume is written.

"Robert Bruce had returned to London, and was in attendance on the English court, when a private token from the Earl of Gloucester, his kinsman, made him aware that his safety and liberty were in danger.† He left London instantly, and hastened to Scotland. It is said that near the Solway Sands they met an emissary of Comyn, whom they found bound for the English court. They killed the messenger without hesitation, and from the contents of his packet learned the extent of Comyn's treachery. In five days Bruce reached his castle of Lochmaben. It was in the month of February 1305-6, and the English justiciaries appointed by Edward's late regulations for preservation of the peace of the country of

Scotland were holding their *assizes* at Dumfries for that purpose. Bruce, who was not yet prepared for an open breach with England, was under the necessity of rendering attendance on this high court, and came to the town for that purpose. He here found Comyn, whom the same duty had brought to Dumfries. Bruce invited his rival to a private interview, which was held in the church of the Friars Minorite; a precaution—an unavailing one as it proved—for the safety of both parties, and the peaceful character of the meeting. They met by themselves, the slender retinue of each remaining apart and without the church. Between two such haughty rivals a quarrel was sure to arise, whether out of old feud or recent injury. The Scots historians say that Bruce upbraided Comyn with his treacherous communication to Edward: the English, more improbably, state that he then, for the first time, imparted to Comyn his plan of insurrection against England, which Comyn rejected with scorn, and that this gave occasion to what followed. Without pretending to detail, what no one save the survivor could have truly described, it is certain that a violent altercation took place, in which Comyn gave Bruce the lie, and Bruce in reply stabbed Comyn with his dagger. Confounded at the rashness of his own action, in a place so sacred, Bruce hastened out of the sanctuary. There stood without two of his friends and adherents, Kirkpatrick of Closeburne, and Lindsay, a younger son of Lindsay of Crawford. They saw Bruce's bloody weapon and disordered demeanour, and inquired eagerly the cause. 'I doubt,' said Bruce, 'I have slain the Red Comyn.' 'Do you trust that to doubt?' said Kirkpatrick; 'I make sure:' so saying, he rushed into the church, and despatched the wounded man. Sir Robert Comyn, the uncle of John, interfered to save his kinsman, but was slain along with him. The English justiciaries, hearing this tumult, barricaded themselves in the hall where they administered justice. Bruce, however, compelled them to surrender, by putting fire to their place of retreat, and thereafter dismissed them in safety. This rash act of anger and impatience broke off all chance which might still have remained to Bruce of accommodating matters with Edward."

The whole reign of Bruce will be read with deep interest, abounding as it does in the most romantic struggles for life and independence. The death of this hero is told with affecting simplicity. It would appear, from the following paragraph, that Sir Walter had adopted Mr. Tytler's views concerning Richard II.'s fabulous escape from Pomfret, and subsequent residence in Scotland.

"There is a story told by Bower, or Bowmaker, the continuator of Fordun's *Chronicle*, which has hitherto been treated as fabulous by the more modern historians. This story bears, that Richard II., generally supposed to have been murdered at Pontefract castle, either by the 'fierce hand of Sir Piers of Exton,' or by the slower and more cruel death of famine, did in reality make his escape by subtlety from his place of confinement; that he fled in disguise to the Scottish isles, and was recognised in the dominions of the lord of the isles by a certain fool or jester, who had been familiar in the court of England, as being no other than the dethroned king of that kingdom. Bower proceeds to state, that the person of Richard II., thus discovered, was delivered up by the lord of the isles to the lord Montgomery, and by him presented to Robert III., by whom he was honourably and becomingly maintained during

⁶ Macbeth, we believe, visited Rome, and was held to be one of the wisest and most accomplished princes of his age.—*Ed. L. G.*

[†] It is said the Earl of Gloucester sent Bruce a piece of money and a pair of spurs. Men's wits are sharpened by danger, and slighter intimations have been known to put them on their guard, and induce them to make their escape when peril hovered over them."

all the years of that prince's life. After the death of Robert III., this Richard is stated to have been supported in magnificence, and even in royal state, by the Duke of Albany, to have at length died in the castle of Stirling, and to have been interred in the church of the friars there, at the north angle of the altar. This singular legend is also attested by another contemporary historian, Winton, the prior of Lochleven. He tells the story with some slight differences, particularly that the fugitive and deposed monarch was recognised by an Irish lady, the wife of a brother of the lord of the Isles, that had seen him in Ireland—that being charged with being King Richard, he denied it—that he was placed in custody of the lord of Montgomery, and afterwards of the lord of Cumbernauld—and, finally, that he was long under the care of the regent Duke of Albany. 'But whether he was king or not, few,' said the chronicler of Lochleven, 'knew with certainty. The mysterious personage exhibited little devotion, would seldom incline to hear mass, and bore himself like one half wild or distracted.' Serle also, yeoman of the robes to Richard, was executed because, coming from Scotland to England, he reported that Richard was alive in the latter country. This legend, of so much importance to the history of both North and South Britain, has been hitherto treated as fabulous. But the researches and industry of the latest historian of Scotland have curiously illustrated this point, and shewn, from evidence collected in the original records, that this captive, called Richard II., actually lived many years in Scotland, and was supported at the public expense of that country."

We cannot conclude our observations on this work without noticing the generous emulation which seems to animate its chief supporters. Sir Walter Scott, in his preface, declares, that "there are few literary persons who would not be willing to incur much labour and risk of reputation, for the privilege of publishing in such society" as that of his coadjutors in the *Cabinet Cyclopædia*. Few indeed, if such be the sentiments of the first literary character of the age. Sir James Mackintosh, whose love of literary leisure is well known, has been roused into action by a like notice. "I ought to warn some readers," says this elegant writer, "that I have been partly allured to undertake this small work by a desire of tracing, in more than one form, the only example of the uninterrupted progress of a great people, during six centuries, towards liberty—the memorable peculiarity which renders the history of England interesting to all nations. I must not conceal, that I have also been tempted to the undertaking by the hazardous honour of connecting my name with the names of my fellow-labourers, especially of those whose opinion that I am not unworthy of their fellowship in such an undertaking ought more than to satisfy the remains of my expiring ambition."

The Fortunate Union; a Romance. Translated from the Chinese original, with Notes and Illustrations: to which is added, a Chinese Tragedy. By J. F. Davis, F.R.S. &c. 2 vols. 8vo. London, 1829. Murray; and Parbury and Co.

WE consider it to be *fortunate* for the interests of literature, that since ponderous tomes have ceased to be favourites with the majority of readers, an abundant supply of lighter works on almost every subject has been furnished for their use; for had not this lighter reading been supplied, we fear that knowledge would have retrograded in the same degree that the at-

tachment to works of profound erudition has diminished. This acquaintance with the taste of the public induces us to suspect that many of our subscribers, if they wished to obtain some general ideas of Persian manners, would prefer reading the *Adventures of Hajji Baba*, or the *Sketches of Persia*, to consulting Sir William Ouseley's really erudite and valuable *Travels*; and for the same reason, we imagine that they will prefer acquiring some knowledge of public and private life in China from the *Fortunate Union*, to searching for it in the seven octavo volumes published by Grosier, or the four magnificent folios that were edited by Du Halde.

The *Fortunate Union** (*Hao-kewchuen*) is the second of a collection of ten Chinese novels, styled from their excellence *Tsae-tsze*, or works of genius, and of which the *Yuh-Kesoule*, translated by Professor Rémusat of Paris, is the third. In it we see the most singular people on earth, (self insulated as they are from all the rest of the world) portrayed by a native hand in almost every variety and condition of human life:

"Quicquid agunt homines—votum, timor, ira, voluptas, Gaudia, discursus—nostrum est farrago libelli."

The interest and bustle of the scene, the spirit of the dialogue, the strong delineation and strict keeping of all the characters, joined to the generally excellent moral that is conveyed throughout the romance, will, if we do not greatly err, make Mr. Davis's translation a source of pleasure and information to very many of our readers.

Circumscribed limits unfortunately prevent us from giving an abstract of this very interesting and amusing work; we must, therefore, content ourselves with extracting as a specimen, an account of a stratagem by which the heroine defeated the third attempt made by the hero's rival to compel her to marry him.

"On the morning of the 20th, Shueyplingsin failed not to proceed, with all the requisite preparations, to perform the sepulchral rites at her mother's tomb. On the preceding day, she had invited her uncle to accompany her with his three sons; but he, considering within himself that the seizure of his niece must necessarily be followed by some trouble, and that if he went in person, part of the responsibility might attach to himself, told her that he should be confined to the house by business of consequence. 'Well then,' said she, 'if you cannot go yourself, why not let my three cousins attend me?' 'The two elder,' replied Shueyun, 'have business at home; but the youngest may go and perform the rites with you.' This being settled, he privately informed Kwoketsu of his motives for staying away, adding, that his youngest son might be found useful as a spy on the occasion. The southern farm being about four miles distant from the city, the young lady rose at daylight to prepare herself, having a large state-chair ready, closed on the four sides with dark blinds, together with the yellow umbrella to lead the way. Four waiting maids followed, in as many small sedans; and the young cousin, with some attendants, brought up the rear on horseback. In this order they proceeded leisurely on their way to perform their sepulchral rites.

In the clear mirror the flower-spangled sprig
Reflected blooms—the moon's pale image lurks
In the bright wave, to mock the gazer's grasp!
Each effort vainly spent, his prey remains
Intangible as shadows in the stream.

On the arrival of Shueyplingsin at the farm,

* This is the sixth work that has been printed at the expense of the Oriental Translation Fund, of which we intend giving a short notice in an early Number.

her tenant opened the gate, and conducted her chair straight to the principal room, upon which the door was closed, and the attendants on horseback remained without the enclosure. The farmer's wife brought in tea, and when Shueyplingsin and her cousin had partaken of it, the young lady inquired if all things were prepared at the tomb? The woman replied that all was ready; upon which she rose and proceeded with her cousin to the sepulchre, at the back of the farm, where they made the proper offerings to the departed, and burnt the gilt paper. The rites being ended, Shueyplingsin went to visit a pavilion on the west side of the farm, to view the beds of chrysanthemum in full bloom: to the east and west were two lofty summer-houses, of which the eastern was surrounded with young peach-trees, for the sake of their blossoms in spring; and the western pavilion, being intended for autumnal visits, was provided, in like manner, with large collections of the chrysanthemum. It was now autumn, and the young lady paid her visit to the latter, admiring the abundant richness and beauty of the flowers, which spread round the base of the building like a variegated carpet of gold. 'Their slender shadow fills the enclosure, and a scattered scent pervades the flower-beds, planted in triple rows: the deeper and lighter tints reflect a yellow light, and the leaves shine varied from beneath the drops of dew. Each hungry floweret inhales the passing breeze, as it sheds around its incomparable lustre. The gazer sympathises with the languishing blossoms, bending their heads all faint and delicate; the mournful view awakes in his mind thoughts suitable to autumn. Say not that it is a sight to satiate the eyes of the indifferent beholder; know that such flowers as these once inspired the poet Taouyuenming, as he indulged his genius amidst verses and wine.' When she had admired the chrysanthemums, Shueyplingsin took a view of the country on the four sides of the pavilion, and observed the country people busily occupied with the autumnal harvest. To her surprise, however, she perceived two idle-looking fellows standing by the side of a mat shed, gazing at the people carrying the grain. Struck by this circumstance, she looked round and perceived three more seated on a heap of straw on the west side of the building, who, on finding that they were observed, immediately rose. On the other side of the wall, too, she caught a glimpse of her cousin, deeply engaged in conversation with a young man in a blue dress: she instantly suspected some mischief was in agitation, but said not a word. In a short time the farmer's wife invited her to take some refreshment within; and the young lady, descending from the pavilion, sent a message to her cousin to come and partake of it. When the repast was over, the latter urged their departure, proposing that, as they had nothing more to do, they should return home immediately. 'Do you amuse yourself a little longer,' said Shueyplingsin; 'I must give directions to the different tenants, and obtain from them some arrears of rent.' When he was gone, she first settled with the people, whom having dismissed, she retired with her females to a small back room, and seating herself there, made them turn all the clothes out of a leathern box, which was immediately filled with broken stones and rubbish, collected for her by a trusty domestic, who was called in to assist: the box was then quietly deposited under the seat of the state chair; a large stone was next bundled up in some clothes and placed upon the seat; after which the door of the chair was locked, and the blinds carefully secured on all sides. The faith-

ful domestics being then called in, and properly instructed, Shueypingsin dressed herself like one of the maids, and stepped into a small chair, the girl whose place she occupied being secretly left at the farm-house, with a charge to the tenant to send her home afterwards. Every thing duly arranged, the doors were thrown open and the chair-bearers summoned. These immediately entered from the enclosure, and each set of men going to their proper chair and taking it up, as before, carried it out, while the umbrella-bearer led the way, and the cousin followed on horseback attended by the servants. They had not proceeded above a bowshot from the farm, when between ten and twenty fellows started up in various directions, two from one side, and three from another, some of whom laid hold of the state chair, while others began to belabour the carriers. 'This is our ground,' cried they; 'what right have you to interfere with our livelihood?' The four chairmen being beaten away from their load, an equal number of the assailants took it upon their shoulders and ran away at full speed; upon which the mounted attendants in the rear galloped after them, exclaiming, 'Ruffian slaves, it is the daughter of the President Shueykenyih that you are carrying off in this insolent manner!' The others, however, only ran the faster, and when the pursuers had nearly reached them, Kwoketsu, who was on horseback under some fir-trees by the road side, with a party of mounted followers, threw himself in the way. 'That young lady,' cried he, 'is my bride, what do you mean by detaining her?' They pulled up in haste, and replied, 'We did not know it was you, sir,—but followed, lest our neglect should displease our lady.' 'Go away home,' said he, waving his hand, 'I will be answerable for all consequences.' With this he gave his horse the whip, and rode forward, with his attendants, towards the sedan. The servants of Shueypingsin, being in the secret, were glad to borrow this pretext for joining their young mistress in the small chair, and quietly attending her in safety to her home. As for Kwoketsu, he escorted the state sedan in joy and exultation into the city."

The astonishment and vexation of Kwoketsu on opening the sedan before the chief magistrates of the city, and many of his friends, whom he had invited to witness his triumph, can be so easily imagined, that we do not consider it necessary to lengthen this quotation by transcribing the account of them.

An English translation of the *Haoukew-chuen*, partly, if not entirely, made from a Portuguese version, having been published about seventy years since, under the title of the *Pleasant History*, we have investigated the comparative merits of the two versions; and, after collating several parts of both with the Chinese original, are thoroughly convinced that Mr. Davis's is incomparably more complete and faithful than the one that was edited by the Bishop of Dromore. It also contains all the poetry, which was entirely omitted in the *Pleasant History*, and many very curious notes; which, being principally derived from personal observation, possess peculiar value. The style of the translation also proves, that while Mr. Davis has been most successfully cultivating a knowledge of Chinese, he has not abandoned the *literas humaniores* of Europe.

In addition to the *Fortunate Union*, and a Chinese tragedy that is appended to it, Mr. Davis has translated a Chinese comedy, and a volume of *Tales*, published a collection of *Moral Maxims* in Chinese and English, and contributed several essays and translations to the

Royal Asiatic Society.* This well-bestowed industry encourages us to hope that we may be favoured with more publications from his prolific pen; and if we might recommend a work to him for translation, it would be the *San-kwo-che*, an elegantly written historical romance, relating to the civil wars of China in the third century. It would, at least, come within the compass of his leisure to collate with the original, and render into English, a Latin translation of the above-named work, made by a Catholic missionary, and at present in the library of the Royal Asiatic Society.

The British Naturalist.

[Second notice:—Conclusion.]

PURSUING the subject of emigration, we copy some particulars relative to the herring from this interesting volume.

These fish, we are told, "prefer the deep water, and, generally speaking, avoid the shoal coasts; and when they do get entangled upon one, great numbers are wrecked. The rocky promontory at the east end of the county of Fife, off which there lies an extensive reef or rock, sometimes has that effect; and there have been seas in which, when the difficulties of the place were augmented by a strong wind at south-east, that carried breakers upon the reef and a heavy surf along the shore, the beach for many miles has been covered with a bank of herrings several feet in depth, which, if taken and salted when first left by the tide, would have been worth many thousands of pounds; but which, as there was not a sufficient supply of salt in the neighbourhood, were allowed to remain putrefying upon the beach, until the farmers found leisure to cart them away as manure. The herring is a remarkably delicate fish, and dies almost the instant that it is out of the water, or gets the slightest injury in it; and these circumstances, while they render the stranded shoals a much more frequent, abundant, and easy prey than if they were more tenacious of life, cause them to putrefy much sooner. One of those strandings took place in and around the harbour of the small town of Crail only a few years ago, but before the new regulations were passed with regard to salt. The water appeared at first so full of herrings, that half-a-dozen could be taken by one dip of a basket. Numbers of people thronged to the water's edge and fished with great success; and the public crier was sent through the town, to proclaim that 'callar herrin'—that is, herrings fresh out of the sea—might be had at the rate of forty a-penny. As the water rose the fish accumulated, till numbers were stunned, and the rising tide was bordered with fish, with which baskets could be filled in an instant. The crier was upon this instructed to alter his note, and the people were invited to repair to the shore and get herrings at one shilling a cart load. But every successive wave of the flood added to the mass of fish, and brought it nearer to the land, which caused a fresh invitation to whoever might be inclined to come and take what herrings they chose gratis. The fish still continued to accumulate till the height of the flood; and when the water began to ebb, they remained on the beach. It was rather early in the season, so that warm weather might be expected; and the effluvia of so many putrid fish might occasion disease; therefore the corporation offered a reward of one shilling to

every one who would remove a full cart-load of herrings from that part of the shore which was under their jurisdiction:—the fish being immediately from the deep water, were in the highest condition, and barely dead. All the salt from the town and neighbourhood was instantly put in requisition; but it did not suffice for the thousandth part of the mass,—a great proportion of which, notwithstanding some not very successful attempts to carry off a few sloop loads, in bulk was lost.—In the bays or 'lochs,' on the west coast of Scotland, where the shoals of herrings are very abundant, and apt to be driven ashore and stranded by heavy gales from the north-west, these casualties often occur. But though these occurrences are a great and obvious loss, they do not appear to have any effect upon the supply of herrings, whose numbers do not seem capable of apparent diminution, either by the casualties of nature or the schemes of art. The habits of this most abundant, and, perhaps, all things considered, most valuable fish, are but imperfectly known; and they have been a good deal misrepresented. Their apparently capricious visits to particular parts of the coast, which did not seem to depend upon any known law, naturally enough led the inhabitants of the places which they thus periodically, but irregularly, visited, to impute to them certain superstitious likes and dislikes. The naturalists, too, or those who took upon themselves that character, publishing their opinions from little observation and less reflection, rendered the delusion more extensive and inveterate; till those who had never seen a live herring, were able to trace its migrations in the deep with as much certainty as they could the motion of the hands upon the dial of the village clock.

"The herrings do not come in myriads from the polar sea, beginning their progress in January, because there are no means of producing them there. Spawn has not been found to animate in any place except floating near the surface, or in shallow water, where both the sun and the air act upon it; and while the polar seas and shores are open to such action, the herrings are not there; they are on our shores, the full-grown and the young. But setting aside the impossibility, the supposed emigration would be without an object: they would not come for food, as they are said to leave the north just when food would be found there; and if they are annually produced in the north, they could not come to our shores for the purpose of spawning, even though they are all obviously in preparation for such a purpose. Beside, there is no animal that migrates southward in the spring, and therefore the theory would require one law for the rest of creation, and another for the herring—that the latter should be chilled by the general warmth of the spring, and warmed by the polar frost. Now, so far is the production of fish from being independent of the influence of heat, that, just as we would be led to infer from the slow progress of the solar beams through the element in which they live, they require the whole, or the greater part of our summer, to mature the germs of their countless broods. Nay, it appears that many, if not most of the species, cannot mature their spawn in the depths of the ocean, to which they retire to recruit their strength; but that they come to the shores and shallows, where the heat of the sun can penetrate to the bottom, and be reflected by it, for the purpose of maturing as well as of depositing their spawn. We know not, and we cannot know, the secrets of those mighty depths which no plummet can

* A very elaborate and interesting Essay on the Poetry of the Chinese, by Mr. Davis, is expected to appear in the next fasciculus of the Royal Asiatic Society's Transactions.

fathom; but we have every reason to believe that there is a profundity where animals, constructed as the fishes that we see are, could not by possibility exist. Imagine the pressure of a thousand atmospheres, or between six and seven tons, upon every square inch of surface, and think of the miracle of muscular power which could give motion even to the smallest fish there; imagine, too, a permanence of state where the air never moves, and the sun never warms; and think what a dwelling for that which must breathe by an apparatus so delicate as the gills of a fish! It may be said, that God is capable of making creatures adapted for living there. We do not deny that he is, neither do we deny their existence; but we deny that the laws of nature are ever violated, which they would be, were the fishes which we know able to move under such a pressure, or propagate, so completely excluded from the action of the sun and the air. The herrings come to the shores and estuaries to mature and propagate their spawn, which they do over a greater range of the year than most other fish, continuing the operation to the middle of winter, and retiring into deeper water after that is done. But there is no reason to conclude that they have much migration in latitude, or that they ever move far from those shores which they frequent in the season. The fry too are found on the shores and in the bays and estuaries frequented by their parents; and they do not go to the deep water till late in the season. They even appear to go farther up the rivers than the old fish, for they may be taken in brackish water with a common trout-fly. The habits of the herring are thus a good deal like those of the salmon; and it is probable that there is a great similarity in the whole *oviparous* fishes; that they all frequent the banks and shoals for the purpose of spawning, and go to some short distance in deeper water to recover their strength. Those which are *ovoviviparous*, or bring forth their young hatched, are under no such necessity; though they follow the others to feed upon them and their spawn or fry, and probably require the influence of the air and heat of the shallow water to perfect the internal hatching of their eggs. It has not been ascertained whether any of these fish spawn every year; but there are some facts which would lead to the conclusion that they do not. The white-fishing, on the east coast of Scotland, which is principally carried on for the common cod (*morhua vulgaris*), and the haddock (*morhua agliffinus*), used to be, in a great measure, suspended during the spring, when the fish had spawned; but, in time, the fishermen found out, that when the fish were neither plentiful nor good upon the shallow banks, they had only to be a little more adventurous, and go into the deep water, in order to be successful all the year round. Now the fish found in the deep water cannot be those which have just spawned, for they are fat and firm, and have young milts and roes in them; and hence there is some probability that the cod, and other fish of the same structure, take two years or more to produce their immense progeny; and that thus there is not a fish in the sea but which is in season all the year, if its place of residence and the mode of taking it were known. It is by these general views that the particular facts are made to connect themselves with the system of nature, and lead to useful discoveries in the arts. When the fish are upon the shores and in the estuaries, nay, when they are upon the wide ocean, they have a host of enemies. All fishes seem to be themselves *omnivorous*—consuming every thing that

they can swallow; and the number of sea-birds is perfectly incredible. The numbers that are upon the uninhabited islets in Orkney, Shetland, and the Western isles, as well as at those inaccessible promontories on other parts of the coast, would exceed the belief of any one who has not actually seen them, and yet they are nothing to the numbers found in lonely places, surrounded by more extensive seas."

Of the seal we are told—

"When a seal cannot escape, it will bite in self defence, but it does so only in extremities; and if a blow be aimed at it with a stick, it tries to seize the stick rather than bite the assailant. In this it sometimes succeeds, and then wriggles off to the water, where it swims about with the stick in its mouth, in a playful or triumphant manner. It is more easily tamed than, perhaps, any other animal; is capable of feeling a great deal of affection; and appears fond of the society of man. During the time that rumoured invasions by the French caused all parts of the coast of Britain to be fortified, a small party on one of the little islands in the Firth of Forth, above Edinburgh, amused themselves by taming a seal. It had all the affection and all the playfulness of a dog. It fished for itself, and (we believe) sometimes for its masters. It fawned about them, licked their hands, and, if it did not accompany those who made an excursion in the boat, it was sure to meet them on their return. It always came to their hut to sleep, and conducted itself as if it felt that it was one of the party. Sometimes it would snatch up a stick or a brush, and scamper off to the water, where it swam about with the plunder in its mouth, often approaching the shore till within reach of its observers, and then it would be off to a distance. But though it seemed to take delight in teasing them in that way, it always ultimately came back with whatever it had taken, and laid it at their feet, fawning and fondling all the while. Indeed, if they did not give chase, it seldom remained long in the water, but came back apparently disappointed at being deprived of its sport. When they went to Leith for orders or stores, the seal generally accompanied them, swimming all the way at the side or stern of the boat; and when the boat was made fast at the pier at Leith, it took up its position inside, and kept watch till they returned. Fish was not its only food; it could eat many things, and it was very fond of bread and milk. There was no saying how far its training might have been carried, but it fell out of a bed and was killed while young. The ease with which the seal can be tamed, the playfulness of its manners, and the steady attachment which it has for its home and its human associates, together with the value of its skin and its oil (its flesh used formerly to be eaten, and there is no question that the quality could be greatly improved, if a mixture of other food were given along with the fish); these, and also its disposition to part with a portion, at least, of the produce of its fishing, point out a great probability of advantage that would result from the addition of the seal to the list of domestic animals. Probably it might be found to combine many of the valuable qualities of the ox and the dog, while no rent would have to be paid for its pasture. It so happens, also, that the places where seals are now most abundant, are those at which the keep of land animals is most expensive; and the idea that the herd should come from the sea to be milked, or give their carcases as food, or that a man should go forth a-fishing with a pack of seals around his boat, involves no more of the impossible or the ridiculous, than many

things that are now of every-day occurrence, would have involved if mentioned only fifty years ago. The female seal generally produces two at a birth, and the time of their production is about Midsummer. She is an affectionate mother, and battles keenly for her young, if she be there when any one goes to annoy them. Her nursery is generally in a cave; and in the large caves, such as those upon the north coast of Scotland, there is often a number in the same. The people frequently enter with torches and clubs, for the purpose of despatching them, and they are killed by a comparatively slight blow on the nose; but when there are many old ones in the cave, they often upset the intruders in the scuffle, and thus the scene becomes ludicrous, if not dangerous. Seals are often caught in rather a cruel manner: iron hooks are placed in the front of the rock or bank on which they are basking, or in a beam of timber placed against it; a person then steals near to the place where they lie, fires a musket, or makes any other loud and sudden noise, at which they take alarm, and, forgetting their usual caution in avoiding dangers, plunge headlong toward the water, and are caught and suspended upon the hooks. As seals approach more nearly to the nature and character of land animals than any other inhabitants of the water, which are not very well fitted for locomotion upon land, so they are, like these, subject to epidemical diseases, which often affect them, to a very great extent. There have been instances in which the beaches every where on the north coast of Scotland, and the islands of Orkney and Shetland, have been covered with the bodies of dead seals which were cast ashore by the tide; and when that has occurred, the seals that were seen swimming in the water were weak and sickly. The source of these casualties is not known; and no observation appears to have been taken of the particular state either of the atmosphere or of the sea."

Here, however, we must conclude and set our seal, again recommending the *British Naturalist* as a very agreeable and excellent performance.

AMERICAN ANNUALS.

The Atlantic Souvenir. Philadelphia, 1830, Carey, Lea, and Carey; London, Kennett.

The Token: a Christmas and New Year's Present. Edited by S. G. Goodrich. Boston, 1830. Carter and Hendee.

THESE are two very pretty little volumes, and with many an article in their table of contents worthy of the pages of the best of their European ancestors. With due respect to seniority, we shall begin with the *Atlantic Souvenir*. The poetry is not of an original, consequently not of a high order,—there is much, however, that is very pretty; and the "Lays of the Seasons," by James G. Percival—"the Stolen Ring," by G. P. Willis—"the Crystal Gem," by W. H. Lance—and "the Night Hawk," by J. W. Stebbins, which contains some peculiarly fine lines;—all deserve especial notice. The longest tale is certainly the worst:—"Love's Falconrie" has been told in every possible manner; and we do wish an interdict were laid on the loves of Mary Tudor and Charles Brandon,—for our time at least. But it has some clever companions—"Cacoëthes Scribendi," by the author of Hope Leslie, is very lively and graceful; and "the Ghost," by J. K. Paulding, is told with great humour. The following extract is from "the Fawn's Leap:" we must premise that "the Fawn" is the name given to a young Indian girl, whose lover has been taken prisoner, but whom she

attempts to rescue. She visits him in the disguise of a magician.

"The following day the same mummery was repeated; and the guard, not only unsuspecting, but exhibiting some symptoms of disgust and weariness at the perseverance of the sorceress, lay indolently about the dungeon; thus enabling Xalissa briefly to unfold her plan. 'To-morrow you are doomed to the stake. We must fly to-night. The warrior who guards the door, I have told you, is my brother; his life must be safe—at least till all else fails. We must exchange dresses. I know the passes to the river, which you do not; wounded, you could not escape. I will break the guard! When the Natchez pursue me, take your course to the Humachitto. I will meet you where it joins the Mississippi. Fear not for me—the bowstrings will be charmed! My foot is light. Be silent. Obey, and we are safe!' Then, with a wild and unearthly shriek, she seized a fire-brand, and renewing her sibyl-like denunciations and incoherent maledictions, her voice sank away, as if from the exhaustion of passion, into coarse and direful tones: the notes were taken up by the guard excited to fury, and the song of death rang fearfully among the surrounding echoes. Xalissa returned at night prepared to accomplish her hazardous purpose. She had brought with her a vegetable acid, active and powerful in its effects; and with this, in the progress of her pretended witchcraft, she managed to touch all the bowstrings. The savages were passive and unsuspecting; for they regarded her as being supernaturally inspired, and excited to new raptures by the near prospect of vengeance and blood. So soon as all became silent, and the watch-fire sank down upon the embers, she again seated herself by the side of Alama and cautiously severed the cords which bound him. She took his bright head-piece and clasped it on her own brow. She then put her mask upon him, and threw around him the particoloured tunic she had worn, at the same time enveloping her little person in his hunting-shirt, stiff with blood from numerous and ghastly wounds. She now took the position he occupied; while Alama, assuming hers, personated the character of the tormentress, while she appeared as the wounded and condemned captive. These changes were effected more silently and rapidly than can be explained by words. Fuel had been added to the fire by the Indians. And, by the time they were accomplished, the flame went up, bright and sparkling, in the midst of a savage but picturesque group, worthy the pencil of Salvator Rosa. Now was the moment for action. Xalissa sprang forward, and, by a blow dealt with all her force, threw her brother from his balance, and passed him. He, not doubting that the prisoner had escaped while the old woman slept, raised a whoop which alarmed all his companions. They seized their bows, and before Xalissa had passed beyond the light of the fire, twenty arrows were drawn upon her, either of which must have proved mortal; but the charm she employed proved effectual, and the bowstrings snapped into a thousand pieces! They were, of course, relinquished, and the whole band, with a shout of vengeance, pressed hotly on the flying girl. We now return to Alama. The brief communications which necessarily passed between him and Xalissa, and the engrossing interest of the occasion, did not enable him properly to appreciate the motives of this generous girl. All now flashed upon his mind. After his fetters were removed, he might have passed

the guard as she had done, and with no greater hazard; but she dreaded lest Alama, in the struggle for escape, would endanger the life of her brother; or that, stiff from wounds, he would be overtaken in flight. But if these apprehensions had proved groundless, his ignorance of the passes might involve him in difficulty, or, at best, leave him to contend, at fearful odds, with those who could tread blindfold every bayou and deer-path of these intricate defiles. On the other hand, disguised as she was, she did not deem it possible that the Indians would suspect any stratagem, and, consequently, the pursuit being drawn upon her, Alama, though wounded, might in a few hours be beyond the fear of danger. So far all had succeeded; and the prisoner left the scene of his sufferings unmolested, and with new sentiments of admiration and affection for the devoted maid. Divesting himself of his encumbrances, he was soon buried in the recesses of the forest, and turned his yet feeble steps to the point designated by her. In the mean time the lovely Fawn, impelled less by fear for herself than anxiety and affection for him, fled before her pursuers. Her light and symmetrical form, borne along as if by the breeze, seemed to flit onward like some bird of night on its noiseless wing. The Indians in the outset were in no doubt of overtaking the wounded prisoner, and laughed in scorn at the shallow attempt made to escape, where cunning had not been resorted to, and where physical power or personal bravery could not avail. They were, however, speedily undeceived, and derision turned into utter astonishment, at the spectacle of a wounded and emaciated prisoner, with the speed of a deer, setting at defiance their fleetest runners. With every inducement, therefore, to urge them on, they encouraged one another to new efforts and redoubled exertions. They now rapidly approached the rugged and uneven ground which marks the line of the 'Ellis Cliffs.' The continual abrasion of the Mississippi undermines huge banks of earth, overhanging here the margin of the precipitous shore, leaving frightful chasms and deep bayous running on a level with the river, and at various angles to its course, far up into the heights. This, together with the springs, bursting out at various altitudes, and passing through sandy or decaying strata, produces, particularly in the rainy season, a melting and sinking of the soil, and a waving, uneven surface. On the return of the summer suns the soil becomes baked, and extremely rigid and disagreeable to the feet. It was here that Xalissa, struggling against difficulties and dangers, and beset by enemies active and persevering, found her strength beginning to yield. From the operation of causes just detailed, the pass to the river, formerly used by the Natchez, had been cut off, and another was now resorted to, though farther and more circuitous. The former ran along a narrow ridge between two deep ravines. Across this a rain gutter had been formed, which, gradually widening, had become a deep and dangerous gulf, deemed impassable by the foot of man. It was the spot recognised by my old Indian friend. The object of those in pursuit was, therefore, to cut off the retreat of Xalissa by the new route, should she attempt it, and drive her upon one of which they supposed her ignorant, being that abandoned as impassable by reason of the 'break.' Xalissa, however, knew them both. She strained every nerve to reach the new and safe descent. It was in vain. The poor girl, nearly exhausted, found, as daylight approach-

ed, that her brother, the fleetest of the Indians, was gaining upon her, and that, in fact, escape by mortal means was almost hopeless. She therefore ceased her flight, and paused, as if collecting her powers for some desperate resource. Upon this the Indians, secure of their victim, sent forth a yell of triumph. Xalissa now turned suddenly and went directly down the deserted pass. In this attempt no interference was offered by the Natchez. On the contrary, when they reached its entrance, and saw her pent up between the highlands and the chasm, without hope of escape either to the right or the left, their joy was uncontrolled, and a savage and exulting cry rang ominously among the cliffs. The enthusiastic girl felt that a moment had arrived, involving her own fate and that of her wounded lover; for her capture must expose the stratagem, and place his fate beyond the reach of hope. Between these probabilities and personal danger there was, in her mind, no hesitation. She hastily threw off the hunting shirt taken from Alama, tightened the belt that clasped her person, and, with a fearless bound, cleared the appalling gulf, now spreading forth its terrors between her and the astonished and baffled savages! Pausing for a moment to recover from the stunning effect of the leap, she raised her beautiful eyes in adoration to her divinity, whose warm rays were just emerging from the east. To her his rising seemed invested with new glories: perhaps she believed that he contemplated her enterprise with favour, and thus benignly smiled on its success. Be it, however, as it may, she offered to heaven the purest of all sacrifices—the tribute of an innocent and grateful heart; then, plunging forward into the forest, she sought the shores of the Mississippi. Alama, in the meanwhile, unobstructed and unpursued, reached the mouth of the Humachitto; and there upon the bank, trembling with anxiety for his safety, sat his beloved girl! She sprang forward, in her artlessness and affection, and, clasped in the arms of the wounded chief, hid her face, radiant with joy, in his manly bosom."

We now proceed to the *Taken*; and among the best of its contents are the "Utilitarian," a very singular but striking tale, by John Neal, the author, if we mistake not, of some most original American novels; "The Height of Impudence," by James Isaacs, a humorous sketch; "The Country Cousin," by the author of *Hope Leslie*, sweetly told; and from the "Indian Fighter," by the author of *Francis Berrian*, we extract a picturesque sketch of American scenery.

"With us emigrated a band of backwoodsmen, who sought their homes on these fair and untrodden plains. As friends knit by the ties of common pursuits, and the strong bond of intending to be fellow-dwellers in the desert, we selected contiguous farms on the open grass plains; and our cabins rose under the pecan and sugar maples, that formed a skirt of deep and beautiful forest on the banks of the stream. We were fresh from the fastidious creations of luxury and art. I well remember the day when our tents were first pitched in the wild. Here all was fresh nature, as in our forsaken home all had been marked with the labour of man. The sky was beautifully blue and cloudless; and the mild south gently rustled the trees, as it bore fragrance in soft whispers along the flowering wilderness. The huge, straight trees were all moss-covered; and their gray trunks rose proudly, like columns. The starting hares and deers, and the wild denizens of the woods bounded away from our path. Eagles and os-

rion vultures soared above our heads. Birds with brilliant plumage of red, green, and gold, sang among the branches. The countless millions of water-dwellers, awakened from the long sleep of winter, mingled their cries in the surrounding waters. We added to this promiscuous hymn of nature the clarion echoes of our bugles, the baying of our dogs, all the glad domestic sounds of animals that have joined partnership with man, the hearty blows of the woodcutter's axe, the crash of falling trees, and the reckless wood notes of the first songs which these solitudes had heard from the creation."

We wish we could find room for the conclu-

sion of "Chocorua's Curse," by the author of "Hobomok;" but our limits forbid: and we have only to say, that these Annuals do much credit to American literary taste and refinement; they deserve all possible encouragement from their countrymen; and in recommending them to our own, we open to them a new and considerable source of pleasure.

Hood's Comic Annual.

(Second Notice.)

We gave in our last a taste of the literary humours of this merry tome, both in verse and

prose; but confessed our inability to convey any adequate notion of the drollery of its wood-cut embellishments, of which there are about fourscore, and every one of them a laugh. It now affords us pleasure to supply this desideratum; and here we present our readers with three specimens of these ludicrous pictorial jokes. Like many of the author's whims, they are so odd, that we wonder they could ever have entered into any body's head; and certainly they never could, in such numbers and variety, enter into any head but that of Thomas Hood.

A Constable's Miscellany.

Enjoying the Tails of my Landlord.

Breaking-up, no holiday.

Having already pretty fairly illustrated the literary portion of the "Comic," we shall only add a few short examples, and mention that three of the most amusing pieces formerly appeared in the pages of the *Literary Gazette*. We would also refer to the "Storm at Hastings," as a poem containing a fine mixture of the beautiful and the playful; but as it is too long for our purpose, we quote, in preference, a parody on a sweet composition of Mr. Reynolds', in his published poems.

"Lines to a Lady on her Departure for India.

Go where the waves run rather Holborn-hilly,
And tempests make a soda-water sea,

Almost as rough as our rough Piccadilly,
And think of me!

Go where the mild Madeira ripens her juice,—
A wine more praised than it deserves to be!

Go pass the Cape, just capable of ver-juice,
And think of me!

Go where the tiger in the darkness prowleth,
Making a midnight meal of he and she;

Go where the lion in his hunger howleth,
And think of me!

Go where the serpent dangerously colleth,
Or lies along at full length like a tree;

Go where the Sutte in her own soot broleth,
And think of me!

Go where with human notes the parrot dealeth
In mono-poly-logue with tongue as free,
And, like a woman, all she can revealeth,
And think of me!

Go to the land of mullin and nankeening,
And parasols of straw where hats should be;
Go to the land of slaves and palankeening,
And think of me!

Go to the land of jungles and of vast hills,
And tall bamboo—may none bamboo thee!
Go gaze upon their Elephants and Castles,
And think of me!

Go where a cook must always be a currier,
And parch the pepper'd palate like a pea;
Go where the fierce mosquito is a worrier,
And think of me!

Go where the maiden on a marriage plan goes,
Consign'd for wedlock to Calcutta's quay,
Where woman goes for mart the same as mangoes,
And think of me!

Go where the sun is very hot and fervent;
Go to the land of pagod and rupee,

Where every black will be your slave and servant,
And think of me!"

The following is also a whimsical parody on some lines by L. E. L., which were printed in the *Gazette* some years ago,—nearly at the period when that delightful writer commenced her popular career.*

"The Burning of the Love Letter."

'Sometimes they were put to the proof by what was called the fiery ordeal.'—*History of England.*

"No morning ever seem'd so long!
I tried to read with all my might!
In my left hand 'My Landlord's Tales,'
And threepence ready in my right."

'Twas twelve at last—my heart beat high!—
The postman rattled at the door!
And just upon her road to church,
I dropt the 'Bride of Lammermoor!'

I seized the note—I flew up stairs—
Plunged to the door, and lock'd me in—
With panting haste I tore the seal,
And kiss'd the B in Benjamin!

'Twas full of love—to rhyme with dove—
And all that tender sort of thing—
Of sweet and meet, and heart and dart—
But not a word about a ring!

In doubt I cast it in the flame,
And stood to watch the latest spark,
And saw the love all end in smoke,
Without a parson and a clerk!"

Of the more original pieces the following will yield—our London friends in particular—a bit of merriment.

Ode to the Advocates for the Removal of Smithfield Market.

'Sweeping our flocks and herds.'—*Douglas.*

"O philanthropic men!—
For this address I need not make apology—
Who aim at clearing out the Smithfield pen,
And planting further off its vile zoology—
Permit me thus to tell
I like your efforts well!

For routing that great nest of hornthology!

Be not dismay'd, although repulsed at first,
And driven from their horse, and pig, and lamb parts;
Charge on!—you shall upon their hornworks burst,
And carry all their bull-warks and their ram-parts.

Go on, ye wholesale drovers!
And drive away the Smithfield flocks and herds!
As wild as Tartar-Curds,
That come so fat and kicking from their clovers,
Off with them all!—those restive brutes, that vex
Our streets, and plunge, and lunge, and butt, and battle;
And save the female sex
From being cow'd, like I, by the cattle!

Fancy,—when droves appear on
The hill of Holborn, roaring from its top,—
Your ladies—ready, as they own, to drop,
Taking themselves to Thomson's with a Fear-on!

Or, in St. Martin's Lane,
Scared by a bullock in a frisky vein,—
Fancy the terror of your timid daughters,
While rushing souse
Into a coffee-house
To find it—Slaughter's!

Or fancy this:—
Walking along the street, some stranger Miss,
Her head with no such thought of danger laden,
When suddenly 'tis 'Aries Taurus Virgo!'
You don't know Latin, I translate it ergo,—
Into your Arcas a Bull throws the Maiden!

Think of some poor old crone
Treated, just like a penny, with a toss!
At that vile spot now grown
So generally known!

For making a Cow Cross!
Nay, fancy your own selves far off from stall,
Or shed, or shop,—and that an ox infuriate
Just pins you to the wall,
Giving you a strong dose of oxy-muriate!
Methinks I hear the neighbours that live round

The market-ground
Thus make appeal unto their civic fellows—
'Tis well for you that live apart—unable
To hear this brutal Babel;
But our fire-sides are troubled with their bellows.

Folks that too freely sup
Must e'en put up
With their own troubles if they can't digest;

* No poetry, except Lalla Rookh, has had so extensive a circulation as the volumes of L. E. L. The Improvisatrice, the Troubadour, and the Golden Violet, have gone through many large editions; and the Venetian Bracelet, though only published the other day, and amid all the bustle of the *Annals*, is rapidly exhausting the last of an edition of fifteen hundred copies. If poetry be the drug it is so often represented, this must be considered a striking exception to the rule, either in favour of the public taste, or of the genius of the author:—or perhaps of both.

But we must needs regard
The case as hard
That *others'* virtuals should disturb our rest,—
That from our sleep your food should start and jump us!
We like ourselves a steak—
But, sirs, for pity's sake,
We don't want oxen at our doors to *rump-us!*
If we do doze—it really is too bad!
We constantly are roar'd awake or rung,
Through bullocks mad
That run in all the 'Night Thoughts' of our Young!
Such are the woes of sleepers—now let's take
The woes of those that wish to keep a *woake!*
O think when Wombwell gives his annual feasts,
Think of these 'bulls of Bashan,' far from mild ones:
Such fierce tame beasts,
That nobody much cares to see the wild ones!
Think of the show-woman, 'what shews a dwarf,'
Seeing a red cow come
To swallow her Tom Thumb,
And forced with broom of birch to keep her off!
Think, too, of Messrs. Richardson and Co.,
When looking at their public private boxes,
To see in the back row
Three live sheep's heads, a porker's, and an ox's!
Think of their orchestra, when two horns come
Through to accompany the double drum!
Or, in the midst of murder and remorse,
Just when the ghost is certain,
A great rent in the curtain,
And enter two tall skeletons—of horses!
Great philanthropics! pray urge these topics
Upon the solemn councils of the nation;
Get a bill soon, and give some nook
The bulls a bull of excommunication!
Let the old Fair have fair play as its right,
And to each show and sight
Ye shall be treated with a free-lit latitude:—
To Richardson's stage dramas,
Dio—and Cosmo—ramas,
Giants and Indians wild,
Dwarf, sea-bear, and fat child,
And that most rare of shows—a show of gratitude!"

We conclude with "St. Mark's Eve"—a slight, but extremely well-told tale.

"The devil choke thee with un!"—as Master Giles the yeoman said this, he banged down a hand, in size and colour like a ham, on the old-fashioned oak table;—"I do say, the devil choke thee with un!" The dame made no reply:—she was choking with passion and a fowl's liver—the original cause of the dispute. A great deal has been said and sung of the advantage of congenial tastes amongst married people; but true it is, the variances of our Kentish couple arose from this very coincidence in gusto. They were both fond of the little delicacy in question; but the dame had managed to secure the morsel for herself, and this was sufficient to cause a storm of very high words—which, properly understood, signifies very low language. Their meal-times seldom passed over without some contention of the sort,—as sure as the knives and forks clashed, so did they—being in fact equally greedy and disagreeing—and when they did pick a quarrel they picked it to the bone. It was reported, that on some occasions they had not even contented themselves with hard speeches, but that they had come to scuffling—he taking to boxing, and she to pinching—though in a far less amicable manner than is practised by the takers of snuff. On the present difference, however, they were satisfied with 'wishing each other dead with all their hearts'—and there seemed little doubt of the sincerity of the aspiration, on looking at their malignant faces,—for they made a horrible picture in this frame of mind. Now it happened that this quarrel took place on the morning of St. Mark,—a saint who was supposed on that festival to favour his votaries with a peep into the Book of Fate. For it was the popular belief in those days, that if a person should keep watch towards midnight beside the church, the apparitions of all those of the parish who were to be taken by death before the next anniversary, would be seen entering the porch. The yeoman, like his neighbours, believed most devoutly in this superstition—and in the very moment that he breathed

the unseemly aspiration aforesaid, it occurred to him, that the even was at hand, when, by observing the rite of St. Mark, he might know to a certainty whether this unchristian wish was to be one of those that bear fruit. Accordingly, a little before midnight he stole quietly out of the house, and in something of a sexton-like spirit set forth on his way to the church. In the meantime the dame called to mind the same ceremonial; and having the like motive for curiosity with her husband, she also put on her cloak and calash, and set out, though by a different path, on the same errand. The night of the saint was as dark and chill as the mysteries he was supposed to reveal, the moon throwing but a short occasional glance, as the sluggish masses of cloud were driven slowly across her face. Thus it fell out that our two adventurers were quite unconscious of being in company, till a sudden glimpse of moonlight shewed them to each other, only a few yards apart; both, through a natural panic, as pale as ghosts, and both making eagerly towards the church porch. Much as they had just wished for this vision, they could not help quaking and stopping on the spot, as if turned to a pair of tombstones, and in this position the dark again threw a sudden curtain over them, and they disappeared from each other. It will be supposed the two came only to one conclusion, each conceiving that St. Mark had marked the other to himself. With this comfortable knowledge, the widow and widower elect hid home again by the roads they came; and as their custom was to sit apart after a quarrel, they repaired, each ignorant of the other's excursion, to separate chambers. By and by, being called to supper, instead of sulking as aforetime, they came down together, each being secretly in the best humour, though mutually suspected of the worst; and among other things on the table, there was a calf's sweetbread, being one of those very dainties that had often set them together by the ears. The dame looked and longed, but she refrained from its appropriation, thinking within herself that she could give up sweetbreads for one year: and the farmer made a similar reflection. After pushing the dish to and fro several times, by a common impulse they divided the treat; and then, having supped, they retired amicably to rest, whereas until then, they had never gone to bed without falling out. The truth was, each looked upon the other as being already in the church-yard mould, or quite 'moulded to their wish.' On the morrow, which happened to be the dame's birth-day, the farmer was the first to wake, and knowing what he knew, and having besides but just roused himself out of a dream strictly confirmatory of the late vigil, he did not scruple to salute his wife, and wish her many happy returns of the day. The wife, who knew as much as he, very readily wished him the same, having in truth but just rubbed out of her eyes the pattern of a widow's bonnet, that had been submitted to her in her sleep. She took care, however, to give the fowl's liver at dinner to the doom'd man, considering that when he was dead and gone, she could have them, if she pleased, seven days in the week; and the farmer, on his part, took care to help her to many tid-bits. Their feeling towards each other was that of an impatient host with regard to an unwelcome guest, shewing scarcely a bare civility while in expectation of his stay, but overloading him with hospitality when made certain of his departure. In this manner they went on for some six months, and though without any addition of love between them, and as much selfishness as ever, yet living in a subser-

violence to the comforts and inclinations of each other, sometimes not to be found even amongst couples of sincerer affections. There were as many causes for quarrel as ever, but every day it became less worth while to quarrel; so letting bygones be bygones, they were indifferent to the present, and thought only of the future, considering each other (to adopt a common phrase) 'as good as dead.' Ten months wore away, and the farmer's birth-day arrived in its turn. The dame, who had passed an uncomfortable night, having dreamt, in truth, that she did not much like herself in mourning, saluted him as soon as the day dawned, and with a sigh wished him many years to come. The farmer repaid her in kind, the sigh included; his own visions having been of the painful sort, for he had dreamt of having a headache from wearing a black hatband, and the malady still clung to him when awake. The whole morning was spent in silent meditation and melancholy on both sides, and when dinner came, although the most favourite dishes were upon the table, they could not eat. The farmer, resting his elbows upon the board, with his face between his hands, gazed wistfully on his wife,—scooping her eyes, as it were, out of their sockets, stripping the flesh off her cheeks, and in fancy converting her whole head into a mere caput mortuum. The dame, leaning back in her high arm-chair, regarded the yeoman quite as ruefully,—by the same process of imagination, picking his sturdy bones, and bleaching his ruddy visage to the complexion of a plaster cast. Their minds travelling in the same direction, and at an equal rate, arrived together at the same reflection; but the dame was the first to give it utterance: 'Thee'd be miss'd, dame, if thee were to die!' The dame started. Although she had nothing but death at that moment before her eyes, she was far from dreaming of her own exit, and at this rebound of her thoughts against herself, she felt as if an extra-cold coffin-plate had been suddenly nailed on her chest: recovering, however, from the first shock, her thoughts flowed into their old channel, and she retorted in the same spirit:—'I wish, master, thee may live so long as I!' The farmer, in his own mind, wished to live rather longer; for, at the utmost, he considered that his wife's bill of mortality had but two months to run. The calculation made him sorrowful; during the last few months she had consulted his appetite, bent to his humour, and dove-tailed her own inclinations into his, in a manner that could never be supplied; and he thought of her, if not in the language, at least in the spirit of the lady in *Lalla Rookh*—

'I never taught a bright gazelle
To watch me with its dark black eye,
But when it came to know me well,
And love me, it was sure to die!'

His wife, from being at first useful to him, had become agreeable, and at last dear; and as he contemplated her approaching fate, he could not help thinking out audibly, 'that he should be a lonesome man when she was gone.' The dame, this time, heard the survivorship foreboded without starting: but she marvelled much at what she thought the infatuation of a doom'd man. So perfect was her faith in the infallibility of St. Mark, that she had even seen the symptoms of mortal disease, as palpable as plague spots, on the devoted yeoman. Giving his body up, therefore, for lost, a strong sense of duty persuaded her, that it was imperative on her, as a Christian, to warn the unsuspecting farmer of his dissolution. Accordingly, with a solemnity adapted to the subject, a tenderness of recent growth, and a

memento-mori face, she broached the matter in the following question—'Master, how bee'st?' 'As hearty, dame, as a buck,'—the dame shook her head,—'and I wish thee the like,'—at which he shook his head himself. A dead silence ensued:—the farmer was as unprepared as ever. There is a great fancy for breaking the truth by dropping it gently,—an experiment which has never answered any more than with Ironstone China. The dame felt this, and thinking it better to throw the news at her husband at once, she told him, in as many words, that he was a dead man. It was now the yeoman's turn to be staggered. By a parallel course of reasoning, he had just wrought himself up to a similar disclosure, and the dame's death-warrant was just ready upon his tongue, when he met with his own despatch, signed, sealed, and delivered. Conscience instantly pointed out the oracle from which she had derived the omen, and he turned as pale as 'the pale of society'—the colourless complexion of late hours. St. Martin had numbered his years; and the remainder days seemed discounted by St. Thomas. Like a criminal cast to die, he doubted if the die was cast, and appealed to his wife:—'Thee hast watch'd, dame, at the church porch, then?' 'Ay, master.' 'And thee didst see me spirituously?' 'In the brown wrap, with the boot-hose. Thee were coming to the church, by Fairthorn Gap; in the while I were coming by the Holly Hedge.' For a minute the farmer paused—but the next, he burst into a fit of uncontrollable laughter,—peal after peal—and each higher than the last, according to the hysterical gamut of the hyena. The poor woman had but one explanation for this phenomenon—she thought it a delirium—a lightning before death, and was beginning to wring her hands, and lament, when she was checked by the merry yeoman:—'Dame, thee bee'st a fool. It was I myself thee seed at the church porch. I seed thee too,—with a notice to quit upon thy face—but, thanks to God, thee bee'st a-living, and that is more than I cared to say of thee this day ten-month!' The dame made no answer. Her heart was too full to speak, but throwing her arms round her husband, she shewed that she shared in his sentiment. And from that hour, by practising a careful abstinence from offence, or a temperate sufferance of its appearance, they became the most united couple in the county,—but it must be said, that their comfort was not complete till they had seen each other, in safety, over the perilous anniversary of St. Mark's Eve."

SIGHTS OF BOOKS.

Waverley Novels, Vol. VII. Rob Roy, I.
Edinburgh, Cadell and Co.; London, Simpkin and Marshall.

The first volume of *Rob Roy* is preceded by a very interesting account of the Clan Alpine (McGregors), of the hero himself, and of his family. It consists of 135 pages, and affords a striking picture of barbarous oppression and resistance, of a strange description of feelings and manners, and of the effects of all these brought down to a far later period than is usually imagined, i. e. to the middle of the last century, when Robert Oig (Rob Roy's youngest son) was hanged for the forcible abduction of a widow lady, attended by circumstances peculiarly characteristic of the state of the Highlands, and of the lawless race of which he was the last scion. The frontispiece, by W. Kidd, of the Baillie's interview with Rob in Glasgow gaol, is an admirable embellishment

to this volume, which we would almost say surpasses any of its predecessors of this series.

The Practice of Cookery adapted to the Business of every-day Life. By Mrs. Dalgairns. Second edition. Same Publishers.

ANOTHER edition before we have found time to notice the first, is somewhat of a reproach to us: nor can we now pay Mrs. Dalgairns the attention her merits demand. *Manges des viandes communes* (says the witty and sensible St. Evremond), *mais exquises par la curiosité de votre choix*; and truly the northern Mrs. Rundell appears to be a worthy disciple of this excellent school. Under such cooks, the Scots must become eminently an eating people; and stranger visitors dread haggis, brose, could kail, and singit sheeps' heads, no more.

Greece Saved.

A BOOK in two volumes, in the Russian language, has been published at St. Petersburg, under the title of *Greece Saved*. The first part contains accounts of the Battle of Navarino; the negotiations with the Turks respecting it; and several private communications from the Russian fleet. The second part describes very circumstantially last year's campaigns of the Russians against the Turks, with the addition of official documents, private accounts, anecdotes, &c. The work is adorned with four copper-plates, namely, the portraits of Count Wittgenstein and Count Paskewitch—the passage of the Emperor over the Danube—and the Russian camp before Choumla.

ARTS AND SCIENCES.

CELESTIAL PHENOMENA FOR DECEMBER. 21^d 13^h 19^m—the Sun enters Capricornus, and arrives at the winter solstice: the place of his greatest southern declination is now 2° 22' south of μ Sagittarii, a triple star of the third magnitude, 30" distant from the two bright stars in the head of the Goat, through which the solstitial colure passed upwards of 2000 years since. At the close of the month (31^d 8^h 35^m 41^s 648) the earth arrives at its perihelion: the line drawn from this point to its place of aphelion is called the major axis of the orbit, the extremities of which are not stationary, but moving forward in the order of the signs. In the year 1250 the points of perihelion and aphelion coincided with the solstitial points; these have since then separated 10°: in 6482, the major axis of the earth's orbit will have so far revolved as to coincide with the line of the equinoxes; the spring and summer, taken together, will then be equal to the autumn and winter taken together; at the present time, the former exceeds the latter 7^d 16^h 49^m 32^s.

Lunar Phases and Conjunctions.

	D.	H.	M.
☾ First Quarter in Aquarius	3	6	33
☾ Full Moon in Taurus	10	1	38
☾ Last Quarter in Virgo	17	18	4
☾ New Moon in Sagittarius	25	15	36

The Moon will be in conjunction with

	D.	H.	M.
Saturn in Leo	14	14	15
Mars in Libra	21	23	30
Jupiter in Sagittarius	25	4	30
Mercury in Sagittarius	25	16	45
Venus in Aquarius	29	8	15

Occultation of Aldebaran.

9^d—there will occur an occultation of Aldebaran, of which the following are the circumstances, as occurring at four British observatories and the French capital.

	Sidereal Time.	Mean solar Time.
	H.	M.
Greenwich	23 57	5 44 Immersion.
	23 53	6 40 Emersion.
Bedford	23 56	5 43 Immersion.
	23 52	6 39 Emersion.
Edinburgh	23 53	5 40 Immersion.
	23 44	6 31 Emersion.
Dublin	23 36	5 23 Immersion.
	23 27	6 14 Emersion.
Paris	23 1	5 49 Immersion.
	23 50	6 46 Emersion.

The following diagram will indicate the phase and position of the moon at the time of occultation, also the points of immersion and emersion.

24^d 13^h 15^m—Mercury in his superior conjunction. On the morning of the 16th of November this planet appeared unusually distinct, and shone with sparkling brightness. Its vicinity to Spica Virginis afforded an opportunity of contrasting its colour with this peculiarly white star: under this comparison, the planet appeared of an orange tint: it has usually been described as of a blue colour.

26^d—Venus at her greatest elongation, and 47° 16' from the Sun. This angle of elongation varies from 44° 57' to 47° 48', and depends on the relative positions of the Earth and Venus in their elliptical orbits.

Mars is visible, early in the morning, in the south east. 3^d 9^h—in conjunction with λ Virginis: 15^d 19^h—with 2 α Libræ.

18^d 2^h 30^m—Jupiter in conjunction with the Sun. Saturn, near Regulus in Leo, is advancing to a conspicuous situation for observation: the ring is gradually contracting, and in the year 1834 will appear as a line across the disc, and faintly produced on each side of the orb of the planet. 1^a—the proportion of the transverse to the conjugate diameter of the ring is as 1000 : 232.

In the "Celestial Phenomena for February" the dimensions of the orb and ring of Saturn were given, as determined by Professor Struve with the great refractor at Dorpat. Since these measurements, he has seen reason to correct, in a slight degree, the former results. The following are the corrected dimensions:—

External diameter of the external ring	46.085
Internal diameter of the external ring	35.989
External diameter of the internal ring	34.475
Internal diameter of the internal ring	28.668
Equatorial diameter of Saturn	17.991
Breadth of the external ring	2.403
Breadth of the chasm between the rings	0.408
Breadth of the internal ring	3.903
Distance of the ring from Saturn	4.339
Equatorial radius of Saturn	8.995

Uranus is too near the Sun for observation.
Deptford. J. T. B.

THE EXPEDITION TO THE MOREA.

At the last sitting of the Academy of Sciences in Paris, of which we gave a brief notice last week, a letter was read from M. Bory de Saint-Vincent, dated Milo, Sept. 20, giving some details of the proceedings of the members composing the French expedition to the Morea. M. Bory de Saint-Vincent states, that the islands of the Archipelago which he visited, are so completely parched during the summer heat that there is no vegetation; and that even in the sea, near the coasts, there is no fish. At Santorim, one of the most curious islands of the Mediterranean, and which is of an entirely volcanic character, he found the heat of the earth in some parts very great; and concludes that new volcanoes will speedily mani-

fest themselves. At the same sitting, M. Cordier made a report on the specimens furnished by MM. Quoy and Gaymart, from their voyage in the *Astrolabe*. They are in number more than 900, which is considerable for a maritime expedition, and among islands many of which are purely volcanic.

ASCENT OF MOUNT ARARAT.

Letter from Prof. Parrot to M. P. Sankowsky.
Monastery of St. George, foot of Ararat,
Sept. 23, 1829.

You will undoubtedly be pleased to hear that we are in the convent of St. George, at the foot of Mount Ararat. This place is very conveniently situated to be the centre of our scientific excursions: we have made two attempts to reach the summit of Mount Ararat. The first time we attained the height of 13,000 feet, and were obliged to stop on account of the great steepness of the east side of the mountain. On the 18th of September we made a second attempt. I had with me M. Von Behagel and M. Schimann, a monk of the convent of Etchmiadzin, an enterprising young man, with three soldiers and five countrymen. We passed the night on the limit of the snowy region, which we crossed the next morning. It would have been impossible for us to pass it, had there not been a recent fall of snow. At noon, before we were able to reach the summit, we were compelled to turn back, in order not to expose ourselves to the danger of being overtaken by the night and by the thick fogs, which had arisen and covered the whole mountain before we could get back to our station. My not reaching the summit was owing to the erroneous idea that had been entertained of the height of this mountain; for it is to be observed, that the point which we attained was, contrary to all expectation, about 15,000 French feet above the level of the sea, and consequently higher than the top of Mont Blanc. If the weather should be favourable to my plans, I shall make a third attempt; and, by a more suitable division of the time, endeavour to reach the summit, which, according to my calculations, must be about 2000 feet higher than the point we reached before. On the spot which we attained, consequently not far from the top of Ararat, I have erected a great wooden cross, which stands ten feet above the surface of the ice in which it is planted, so that by the aid of a telescope it may be seen from Erivan. Upon this cross I have nailed a thick plate of lead, on which the following inscription is engraved:—

NICOLAO PAULI FILIO,
TOTIUS RUTHENÆ AUTOCRATORE
JUBENTE,
HOC ASYLUM SACROSANCTUM
ARMATA MANU VINDICAVIT
FIDEI CHRISTIANÆ
JOANNES FRIDERICI FILIUS
PASKEWITSCH AB ERIVAN
ANNO DOMINI MDCCCXXVII.

LITERARY AND LEARNED.

OXFORD, Nov. 21.—On Thursday last the following degrees were conferred:—

Bachelor in Civil Law.—The Rev. W. M. Lally, St. John's College, Grand Compounder.
Masters of Arts.—H. D. Goring, Magdalen College, Grand Compounder; Rev. J. C. Minchin, Fellow of New College; Rev. G. Mason, Brasenose College; Rev. R. J. Beadon, Queen's College.

Bachelors of Arts.—G. Lloyd, St. Mary Hall, Grand Compounder; T. D. Whately, Michel Exhibitioner, Queen's College; R. Dyer, Alban Hall; T. D. Brown, S. Pidsley, H. Wybrow, B. Price, Worcester College; F. J. Foxton, R. Bellamy, Pembroke College; J. A. Herbert, University College; E. Carlyn, T. I. Stewart, Exeter College; W. Bailey, New College.

CAMBRIDGE, Nov. 20.—At a congregation on Wednesday last the following degrees were conferred:—
Bachelor in Divinity.—Rev. W. B. Guest, Catharine Hall.

Masters of Arts.—Rev. W. H. Tucker, Fellow of King's College; J. S. Stock, St. Peter's College; J. Deedes, Trinity College; R. J. Bartlett, St. John's College, Compounder; Rev. H. Pratt, Corpus Christi College; Rev. H. C. Brice, Rev. J. R. Hopper, Christ College, Compounder; E. R. Edgar, Downing College.
Bachelors in Civil Law.—T. W. Hill, R. C. Chawner, Trinity Hall.

Bachelors of Arts.—R. T. Robinson, E. James, Corpus Christi College; T. Burroughs, Christ College.

ROYAL SOCIETY.

THE President, Mr. Gilbert, in the chair.—A paper on "the survey made by Mr. Lloyd across the Isthmus of Panama," was read; accompanying the paper was a copy of the survey. Isaac Robinson, Esq. was elected a fellow. Dr. Turner, Capt. Blake, and T. C. Knowles, Esq., were proposed. Capt. Muller presented a set of his newly-invented globes: these globes we have already described. Six splendid folio plates, illustrative of the lymphatic system, by Professor Meckel, were also presented. These plates were dedicated to Professor Soëmmering, of Frankfort, by whose very recent death science has lost an ardent supporter. Dr. Crombie's *Natural Philosophy and Gymnasia*, and several other works, were also presented. The annual election of officers, delivery of medals, &c. is to take place on Monday.

SOCIETY OF ANTIQUARIES.

THE first meeting of the season was very numerously attended, and an interesting paper was read, from the pen of a clerical member, on the Round Towers which exist in Suffolk and Norfolk. Many new members were proposed.

LONDON PHRENOLOGICAL SOCIETY.

DR. VIMONT laid before the Society a large collection of drawings, from his extensive museum, of crania and brains. He exhibited a view of the skull of the lion, in which the portion dedicated to intelligence was evidently very small, compared with that dedicated to the *instinct carnassier*;—of the interior of the skull of the parrot and goose, and of the domestic fowl and turkey, the capaciousness of the skulls of the former being very much larger than that of the two latter; and the intelligence of the parrot and goose, Dr. Vimont stated, from long observation, to be far greater than of the turkey and fowl, which he finds to be among the most stupid of animals; while the goose, contrary to common belief, possesses a remarkable degree of sagacity;—of the dog and the fox, the skull of the former being largely developed at the anterior portion, the seat of intelligence, while that of the fox was contracted at that part, but large at the superior lateral portions, the seat of cunning;—of the skulls of two dogs, of different breeds; the one far superior to the other in intelligence, and remarkable for a corresponding superiority of size at the anterior portion of the cranium;—of the skull of a young dog, which, after being conveyed in a carriage from Rouen to Caen, found its way back directly, and the large development of the organ of locality was very conspicuous;—of the brains of animals, in which the female only, and of others in which both the male and female, take care of the offspring, the organ of the love of progeny being large in the female only of the former, but equally developed in both the male and female of the latter;—of the brain of the frog, in which he distinctly shewed the *cerebellum* not only (contrary to the assertions of some) to exist, but to be, comparatively, of considerable

dimensions. His observations were made upon animals, fifteen hundred of which were brought forth and reared in his own garden, thus affording him an opportunity of minutely studying their individual powers and dispositions; and although he began by doubting, he terminated by a full conviction of the truth of the fundamental doctrines of Gall, from whom, however, he differs in several subordinate points, both of anatomy and of the localization of some organs in certain species of animals. Dr. Vimont's observations upon man completely coincided with those of Gall respecting all the organs, except those smaller ones immediately around the orbits, which, however, he does not deny, but thinks they require further examination before they are fully established; and notwithstanding he is thus so firm a disciple of Gall, he professes great doubts of the validity of the peculiar doctrines of Dr. Spurzheim and the Edinburgh School of Phrenology.

The Society's room was crowded to excess: among the company were several eminent artists, who expressed the highest admiration at the execution of the drawings. Many were views of the interior and exterior of the skull, and of the brain removed from it, shewing the perfect correspondence which existed between the three, except, indeed, in old age, in some cases of disease, and in certain animals.

Dr. Vimont was then proposed as an Honorary Associate,—a distinction hitherto conferred by the Society only upon Dr. Gall, Dr. Spurzheim, and Mr. Combe.

FINE ARTS.

NEW PUBLICATIONS.

The Passes of the Alps. By Will. Brockedon. No. XII.

WE heartily congratulate Mr. Brockedon on the completion of his highly interesting work. When we recollect that, during three years of arduous exertion in bringing out one of the most extensive publications of the class that ever appeared, there has never been a single failure in producing each successive Number at the time promised, we think that great credit is due to Mr. Brockedon for the punctuality with which he has kept his engagements with the public. Added to this consideration, the twelfth and closing Number is rendered peculiarly valuable, as, besides six finely picturesque views of the magnificent scenery which presents itself in the Pass of the Simplon (the grandest and most beautiful of the various routes over the stupendous range of mountains which separates Italy from all her northern neighbours), and a map of the road from Geneva to Milan, it contains double the usual quantity of letter-press, and a complete map of the whole chain of the Alps.

"The early history of the Pass of the Simplon," Mr. Brockedon remarks, "is involved in much obscurity, and nothing certain is known even of the origin of its name. It is supposed to have been frequented in very early ages; and there is a tradition, that three years before the battle of the consuls Marius and Catullus with the Cimbri, the consul Q. Servilius Cæpio led some Roman legions across this mountain to oppose those northern enemies of Rome, in Transalpine Gaul. Some have sought the etymology of the Simplon in the consular name of Sempronius; but no certain events are recorded which determine the passage of any Roman consul by the Simplon. In many old accounts of the pass it is called Saint Plom; but whether a classical name has thus been vulgarised, or this has been derived

from some Catholic saint, is as uncertain and obscure as the dark ages through which these traditions have descended to us. The future importance of the Simplon, however, will be referred to Napoleon only, under whose orders the present road was constructed. The new route of the Simplon was, in its intention and its execution, a military work. It was determined upon immediately after the battle of Marengo, whilst the difficulties of the passage of the Great St. Bernard, and the almost fatal check of Fort Bard, were fresh in the recollection of Napoleon. In November 1800, he directed the minister of war to send two brigades of engineers, under General Turreau, to open a route, practicable for artillery, across the Simplon. The first of these brigades was stationed between Brigg, on the Swiss side of the pass, and Algbay; and the second between Algbay and Domo d'Ossola, on the side of Italy. Little appears to have been done, and that not in the most judicious way, until, in the winter of the same year, M. Céard, who was at that time engineer-in-chief of the department of Leman, received the orders of the minister of war and the director-general of the *ponts et chaussées*, to take charge of the operations on the Simplon, as engineer of the works and inspector-general. This distinguished engineer arrived at the Simplon on the 22d of March, 1801, and immediately surveyed the entire line of road, which he varied in many important points from that which had been intended by those who preceded him; and became the author of the plan ultimately adopted for the traverse of the mountain, as well as of those additions which rendered this magnificent road complete, from Domo d'Ossola to Arona, on the side of Italy, and from Brigg to Thonon, on the side of Switzerland. The works of the Simplon were shortly after their commencement transferred to the superintendence of the minister of the interior: but their execution from the beginning had been confided to the engineers of the *ponts et chaussées*. Under each of those authorities M. Céard continued the chief engineer and superintendent of all the works to their completion."

In a French national publication, entitled "*Monumens des Victoires et Conquêtes des Français*," &c., edited by M. Ch. Dupin, an attempt was made to wrest from M. Céard the honour which was justly his due, in favour of Messrs. Cordier and Polonceau, two French engineers, and especially of the latter. M. Céard (who was then living) immediately vindicated his claim in a pamphlet; and Mr. Brockedon, who, it appears, has taken great pains to examine all the documents relating to the subject, confirms that claim in the most unequivocal manner.

We are glad to observe that Mr. Brockedon has it in contemplation to publish a small Pocket Manual, the result of his experience, for the use of future travellers in the Alps. It will be in a form so convenient as to suit pedestrian tourists; and will contain maps, lists of routes, sketches of journeys practicable within certain periods, notices of guides, inns, &c.

The Opening of the Sixth Seal. Engraved by Mr. G. H. Phillips, from a picture by F. Danby, A.R.A. M. Colnaghi.

OR the Exhibition at Somerset House in 1828, the picture from which this fine mezzotint print has been engraved, formed one of the most striking and attractive features, and was noticed in the *Literary Gazette* accordingly. The sublime subject of it was probably never

before treated with so much originality and power. It has been done great justice to by Mr. Phillips; who has at once adhered faithfully to its various details, and preserved, with masterly skill, the depth and contrast of its general effect.

Gordale Scar, Yorkshire. Drawn from Nature and on stone by John Scarlett Davis. Hull-mandel.

EXECUTED in a fine, broad, sketchy style of lithography. We hope the incident in the foreground is only a painter's fiction. In any case, we do not think it a happy introduction.

Miss Fanny Kemble, as Juliet. Drawn from Life and on stone by R. T. Stothard. Ackermann.

EVERY one who has had the pleasure of seeing Miss Kemble must instantly recognise this well-marked profile; but we own that we are not quite satisfied with it.

The History and Topography of the County of Devon. By the Rev. Thomas Moore. Including Outlines of the Physical Geography, Geology, and Natural History, of the County. By E. W. Brayley, Jun., A.L.S. With highly finished Engravings. The Drawings and Engravings executed by, and under the direction of, William Deeble. Nos. I., II., and III. London, Jennings.

It is surprising, but at the same time gratifying, to observe the multiplicity of topographical works in the present day. The publication the title of which we have just recited, has commenced making its appearance in numbers, each ornamented with two views. If the plates are not quite equal to some which we have seen, they are, nevertheless, picturesque and pleasing; and the description in the text seems to be full and satisfactory.

The Countess of Cavan,—by Scriven, from Shee,—is the sixtieth of the female portraits so sweetly engraved for *La Belle Assemblée*: we have been much pleased with its grace and beauty.

Nine Embossed Medallion Portraits. By John Wrenmore.

THESE are the commencement of a series, and consist of his Majesty, the late Duke of York, Shakespeare, Milton, Canning, Wellington, Scott, Byron, and Brougham. Some of the likenesses are very good; others not so fortunate. The style has novelty, neatness, and cheapness, to recommend it.

BIOGRAPHY.

EUGENIUS ROCHE, ESQ.

IN recording the death of Mr. Eugenius Roche, the editor of the *Courier* newspaper, we have to lament the loss of a gentleman whose kindness of heart, and amiability of manners, endeared him to all who had the pleasure of his acquaintance. This common-place panegyric, applied to Mr. Roche, is literally correct; but his claims upon our recollection are those of a public character—of one who laboured unostentatiously in the field of literature—who silently held forth to his brother-labourer the friendly hand of assistance—and who so shaped his course through the angry ocean of politics and contending opinions, as to command not merely the respect, but the love of all parties, without compromising his own integrity. Every transaction of his life—nay, every sentence which fell from his pen (and this, when speaking of a political writer, is an extraordinary assertion) were distinguishable by sincerity of

intention, and kindness of feeling. Few men, we believe, of purer intention, ever lived.

Mr. Roche was a scion of the house of Fermoy—distinguished in history by its heroic conduct in the cause of the unfortunate Charles—its devoted attachment to that cause,—Lord Roche having contributed a large portion of his pay, obtained from a foreign service, to the support of Charles II. when in exile,—and by the profligate return made by that monarch for such conduct, his benefactor's widow having been an aged and miserable beggar in the streets of Cork.

We can scarcely call Mr. Roche an Irishman, although he was born in Dublin in 1786; for his parents emigrated with their family to France before he had attained the age of two years. In France Mr. Roche remained until he was eighteen, and received there a liberal education; in the course of which he distinguished himself by obtaining various prizes. His father (who is still living) held a situation as professor of modern languages under the French government; and strongly enforced on his children the necessity of studying the English and Italian languages: so that Mr. Roche, when he made his way into England in 1804, was an accomplished scholar, having composed various poems in French (which may be called his own tongue), in English, Italian, Latin, and Greek.

Mr. Roche brought with him to London the strongest letters of recommendation to Messrs. Hoare, of Fleet-street, by whom he was received in the kindest manner, particularly by the late Mr. Hoare, in whose house he was a guest for nearly two years.

Before Mr. Roche had attained the age of twenty he was editor of *The Day*, a morning newspaper; and as editor of it he suffered twelve months' imprisonment for a paragraph adjudged to be a libel on the government, although it was distinctly understood that such paragraph had been inserted by the proprietors of that journal without his knowledge.

On his liberation from confinement, Mr. Roche became editor of *The National Register*, a weekly paper; and subsequently the editor of a magazine called *Literary Recreations*. It is a curious fact, which we believe has not been before mentioned, that in this periodical were printed some of the earliest productions of Lord Byron, Allan Cunningham, and Gaspey. Lord Byron's verses beginning with "There is a mystic thread in life," were enclosed to the editor in a note, stating, that if they were deemed worthy of insertion in his valuable publication, they were quite at his service; and if inserted, his lordship requested that some copies of the Magazine should be sent to him.

On the demise of his *Literary Recreations*, Mr. Roche took a distinguished share in the editorship of the *Morning Post*; and it is rather a strange fact in the history of the press, that after twenty years he should have returned to the editorship of the *Day*, the title of which had been changed into the *New Times*, and has since been transformed into the *Morning Journal*. Before this latter change, however, took place, Mr. Roche became a shareholder in the *Courier*, and editor of that paper.

Mr. Roche's death, notwithstanding he had been for some time past in bad health, was unexpected. His confinement had not exceeded a fortnight; and on Monday morning, the 9th of November, at six o'clock, he expired at his house, in Hart-street, Bloomsbury-square.

The only publications of Mr. Roche that bear his name are two tragedies, called *The*

Invasion and *William Tell*; the latter of which was in rehearsal at Drury Lane when that theatre was destroyed by fire, and was consequently never produced. Mr. Roche also appeared as the author of words to a set of French Melodies arranged by Madlle. Jams. Of Mr. Roche's editorial labours, or contributions to various temporary publications, it is impossible for us to speak; but we know that he has left numerous manuscripts behind him, which will secure for him the recollection of posterity. From these we trust a judicious selection will be made for publication. One poem, of some length, entitled *London in a Thousand Years*, we have seen, and can allude to it with confidence of the favourable reception which it will experience.

Mr. Roche was twice married, and has left a widow and large family to deplore his premature loss.

SKETCHES OF SOCIETY.

THE SIAMESE YOUTHS.

WITH the rest of the curious world, we hastened, on Tuesday, to the Egyptian Hall, to examine these natural phenomena; and were certainly much struck by the extraordinary sight of two human beings conjoined so as to act as if they were a single individual. This, as has been described in all the newspapers, is effected by a cartilaginous ligament of several inches in length and in circumference, which, proceeding from the breast-bone, just above the pit of the stomach, unites these brother twins together. It seems as if their right position would thus be face to face: but the necessities of life have taught them to turn half round, so that they appear side by side, with an inclination inwards, and with each an arm about the neck or body of the other, almost, as has been well observed, like two persons waltzing. In the lower edge of the band which links them is the umbilicus, the only organ they possess in common.

Such, in brief, is the physical formation of this freak of nature; and we abstain from medical inquiries, which simply prove that these youths are two distinct, though not separate, persons, whose unity of sentiment and action may readily be accounted for by the force of habit, and the sameness with which they have grown up together, eating the same food, pursuing the same occupations, feeling the same wants, and enjoying the same pleasures. Their safe birth, and continuance in healthy existence to the age of adolescence, being the most remarkable portion of their corporeal history, the investigation of their intellectual affinities offers by far the most attractive study to the philosophical observer. And, here, it is evident that a few insulated facts must be quite insufficient for any rational theory: we trust that opportunities will enable us to mature our opinions. At present, we have merely to state, that these lads are cheerful, healthy, and intelligent. One of the individuals attached to them sportively turned the chair on which they were sitting upside down, (telling them they were too near the fire), and they tumbled off very good-humouredly, laughing at the joke, and immediately after promenaded the room. Indeed, during the whole time we were with them, they were playful and rather acute in their remarks. One had a slight cough, and when he rose to spit, the other rose also and went through the motion of spitting, without saliva. Often when the attention of the one was directed to an object, the other was perfectly indifferent to it.—looking down on the floor, perhaps,

while his brother was engaged on some new object. Generally, however, they were attracted by the same things. A watch, and the hour (the latter probably from a desire to have the fatigues of the audience ended), seemed especially to awaken their interest; and they (each) on the watch being shewn to them, said in their best English—"Ah, ah—half-past three!" They speak Chinese, and the dialect of that language peculiar to their country, Siam. In countenance there is a considerable likeness; but to Europeans, Chinese, like sheep, are so universally alike, that we cannot say their resemblance is more than national. On the contrary, one is darker than the other; his features less of the Mongol Tartar; and we understand that he is (closely studied) the cleverest of the two. There ought to be a register kept of their observations, in order to ascertain the differences of their perceptions and acquirements. As it is, they seem to have but one volition; insomuch, that when it has been tried to make them play at draughts against each other (they play the game, we are told, against a third party excellently), neither can witness his adversary making a bad move without being morally forced to tell him of it! This is a curious contest between the love of victory and identity, and the sympathy of extraordinary situation. As nearly as can be observed, they fall asleep at the same time, and always wake simultaneously. Experiments have been practised on them in their sleep, to ascertain if that which affected one affected both: in these instances, on pinching the ear of one, the other has remonstrated; and they have generally resented such treatment so earnestly, as to repress any further invasions of their mutual repose. We have already said that they are fine, well-tempered boys: for example, in America, at the theatre, they saw a man with one eye,—and they expressed their opinion that he ought only to pay half price for what he saw: we do not know how their own admission would be regulated by them, if they had not a double ticket! And in the room, on Tuesday, they asked who all the people were that came to visit them; being told physicians, they again inquired what that was; and being informed, persons who cured the sick of their ailments, they expressed their utter astonishment at having seen three funerals from their residence in the course of their short abode in London! They thought (ignorant creatures!) that with so many skilful doctors, nobody ought to be allowed to die! We really think the doctors were a little piqued—for we heard great talk of dissecting the poor Siamese.

A short visit, in a crowd, does not put it in our power to say more of these interesting boys; but we shall endeavour to make a closer acquaintance with them, for the information of our distant friends. All we have to add is, that their pulses were about six apart; the one eighty-one—the other, who had the cold and cough, eighty-seven. When the same lad had a tooth-ache, which kept his brother awake during two nights, the latter complained bitterly of two persons being troubled for one person's malady. Yet they are evidently, and, without a pun, very much attached to each other.

While on a subject of this kind, we may notice that the Paris journals mention the death of the bicephalous girl, who has for some time attracted the attention of the *savans* and *illuminati* of that capital. Of her we learn the following particulars by a note from Baron

OR, THE LITTLE BOOK FOR THE LITTLE PEOPLE.
CONTAINING THE HISTORY OF THE UNITED STATES, FROM THE FIRST SETTLEMENT TO THE PRESENT TIME, IN A SERIES OF
SHORT, INTERESTING, AND EASY TO BE UNDERSTOOD, NARRATIVES, FOR THE USE OF THE YOUNG OF BOTH SEXES.
BY
J. B. ALLEN, A. M.,
OF THE UNIVERSITY OF THE SOUTHERN METHODIST CHURCH, DALLAS, TEXAS.
NEW YORK: PUBLISHED BY THE AMERICAN BOOK CONCERN, 10 NASSAU ST. N. Y.
1880.

THE HISTORY OF THE HEBREW COM.

the second scrutiny, General Rogniat, 23; M. Lemandé, —; M. Costas, 14; M. Desgenettes, 1. On the ballot between MM. Rogniat and Lemandé, the former had 31 votes, and the latter 25. General Rogniat was therefore declared elected.

Education.—At a late sitting of the Paris Medico-Philanthropic Society, the following questions were propounded, for the solution of which there is a prize of 1000 francs:—Is the physical education of children in conformity with hygean principles? May we not attribute to the vices of their present education, some of the diseases which afflict youth? What are the ameliorations which may be introduced into public and private physical education?

Horticulture.—M. Adolphe Bellangé, who went to India by land for the purpose of superintending the botanical garden at Pondicherry, in the course of his journey collected several rare plants of Persia and India, hitherto unknown; and among others, new species of melons, tobacco, and excellent vines, the seeds of which he has sent to the Jardin des Plantes at Paris. The Cabinet of Natural History is also indebted to him for specimens of fish and insects; and other institutions for Birman medals, Indian pottery, Indian vocabularies, &c.

LITERARY NOVELTIES.

His Majesty, it is stated, has very graciously permitted George Colman to dedicate his *Random Records*, now nearly ready, to him.

The Records of Captain Clapperton's last Expedition to Africa, by Richard Lander, his Faithful Attendant, and the only surviving Member of the Expedition, with the subsequent Adventures of the Author,—are nearly ready for publication.

Captain Dillon's Voyages in Search of the Wreck of La Pérouse are also nearly ready.

Mr. Buckingham, who has been continuing his course of lectures on Eastern Affairs with much *clat* in various places, has announced his intention of converting his *Oriental Herald* into an *Oriental Quarterly Review*, commencing with the New Year.

Messrs. Westley and Davis announce for publication, early in the ensuing year, an edition of the Old Testament according to the old established version, with the exception of the substitution of the original Hebrew names in place of the English words Lord and God, and of a few corrections thereby rendered necessary; with Notes by the Editor.

Mr. John H. Brady, late of the Legacy Duty Office, announces the Executor's Account-Book, the design of which is to enable executors under any estate to keep their own accounts with precision and accuracy.

St. Petersburg, September.—Count Khvostoff, now in the decline of life, is publishing a complete edition of his poetical works, in six volumes, three of which have already appeared. The three others will be published before the end of the year. The first volume contains the Lyric poems; among which, besides paraphrases of some of the Psalms, and other parts of the Scriptures, we may mention with praise the Ode on the Consecration of the Cathedral of our Lady of Casan, at St. Petersburg, and the pieces entitled Calumny and the Rattle. The second volume contains longer pieces; among which is a descriptive poem of seven hundred lines, called the Russian Navigators. This volume contains also a description of the fête at Catherinehoff, and concludes with a very remarkable didactic poem of above a thousand lines, divided into four epistles, called Advice to the Disciples of the Muses. The object of the author is to shew the superiority of the productions of the Greek and French schools. These several works unite in the highest degree strength and propriety of ideas with the greatest elegance of expression—a quality which distinguishes Count Khvostoff among our authors, and which is particularly valuable in a language not yet fixed.

In the Press.—Hours of Devotion, for the Promotion of True Christianity and Family Worship: translated from the original German.—Patroni Ecclesiarum; or a List (with Indexes), Alphabetically arranged, of all the Patrons of Dignities, Rectories, &c. of the United Church of England and Ireland.—The Etymological Spelling-Book, by Henry Butler, author of Gradations in Reading and Spelling.—Inductive Grammar, by an Experienced Teacher.—A View of the Scripture Revelations concerning a Future State laid before his Parishioners, by a Country Pastor.—Evening Amusements, or the Beauties of the Heavens Displayed, for the Year 1830.—The Olive Branch, a Religious Annual, for 1830, in Prose and Verse; with a portrait of the Rev. R. Gordon.—No. IV. of the Domestic Gardener's Manual, and English Botanist's Companion.—A new edition of Smart's Horace, the English translation corrected and improved.—A Treatise

on Atmospheric Electricity, by John Murray, F.S.H.—Reflections on Insanity and its rapid progress amongst all Classes in Britain, considered in a Legal and Medical Point of View, by Charles Dunne, Esq. surgeon.—A Dissertation on Anatomy, Physiology, and Pathology, by H. W. Dewhurst, Esq. surgeon, &c.: by the same author, a Series of Engravings of the Human Bones and Muscles, for the use of Artists and Students.—an Essay on the minute Anatomy and Physiology of the Organs of Vision in Man and Animals.—and a Series of Coloured Engravings of the Horse's Foot.

METEOROLOGICAL JOURNAL, 1829.

November.	Thermometer.	Barometer.
Thursday .. 12	From 33. to 58.	29.84 to 29.80
Friday .. 13	— 48. — 40.	29.93 — 30.08
Saturday .. 14	— 35. — 46.	30.08 — 29.80
Sunday .. 15	— 38. — 54.	29.86 — 29.80
Monday .. 16	— 28. — 42.	30.06 — 30.21
Tuesday .. 17	— 20.5 — 40.	30.25 Stationary
Wednesday 18	— 28. — 42.	30.26 to 30.28

The first four days generally cloudy and rainy—the remaining three days clear, with frosty mornings.

Prevailing winds, N. and S.W.

Rain fallen, .5 of an inch.

November.	Thermometer.	Barometer.
Thursday .. 19	From 20. to 35.	30.32 to 30.26
Friday .. 20	— 18. — 31.	30.26 — 30.23
Saturday .. 21	— 19. — 34.	30.20 — 30.06
Sunday .. 22	— 22. — 42.	29.66 — 29.48
Monday .. 23	— 34. — 42.	29.56 — 29.68
Tuesday .. 24	— 35. — 40.	29.66 — 29.56
Wednesday 25	— 26. — 35.	29.55 — 29.68

Wind variable, prevailing N. and N.E.

Except the 19th, cloudy—raining on the evening of the 23d. The afternoon and evening of the 24th attended with heavy gusts of wind, which subsided about ten o'clock, when snow fell sufficiently fast to cover the ground by eleven; and during the night such a quantity fell, as to measure about five inches in depth, and to cause much damage to trees of the fir kind.

The fog of the evening of the 20th was thick, though it did not render travelling so dangerous here as in the immediate vicinity of the metropolis.

Rain fallen, .05 of an inch.

Edmonton. CHARLES H. ADAMS.
Latitude .. 51° 37' 32" N.
Longitude .. 0 3 51 W. of Greenwich.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. October 1829.

Thermometer—Highest	60° 50'
Lowest	25
Mean	44-88709
Barometer—Highest	30-16
Lowest	29-19
Mean	29-78366

Number of days of rain and snow, 14.
Quantity of rain and melted snow in inches and decimals, 2-6575.

Winds.—1 East—2 West—6 North—2 South—0 North-east—0 South-east—3 South-west—10 North-west.

General Observations.—The month was distinguished by a remarkably early fall of snow, the earliest that has occurred during the journalist's observations. The 6th was a fine autumnal day; on the next morning rain fell for some little time, when snow fell for some hours, but did not lie: the quantity of rain and melted snow on that day was nearly half an inch: the mean temperature of the month lower than since 1823—another instance of the similarity of the weather in the two years: the barometer lower than last year, but above the average of the month: the whole quantity of rain and melted snow less than usual: the wind between north and west during the greater part of the month: a lunar halo, with misty area, seen on the 15th, from 7 till 10 p. m. The evaporation 0-15 of an inch. The last very early fall of snow was on the 21st of October, 1819.

TO CORRESPONDENTS.

. The pressure of new publications obliges us to defer Reviews of the Memoirs of Bolívar—of Cromwell's Life, in two volumes (Constable's Miscellany)—of Mac Crie on the Reformation in Spain—of the Annals of the Peninsular Campaigns, by the author of Cyril Thornton—and of sundry Novels, Tales, Poems, &c. &c.

R. H. too frequent.
There is enough of nonsense in the world without our publishing E. L. O.'s letter.

ADVERTISEMENTS.

Connected with Literature and the Arts.

ELEMENTS OF NATURAL HISTORY, adapted to the present State of the Science, containing the generic Characters of nearly the whole Animal Kingdom, and Descriptions of the principal Species.

By JOHN STARK, F.R.S. &c.
Adam Black, Edinburgh; and Longman and Co. London.
"It is the only work in our language which affords a popular, and at the same time a strictly scientific view of the animal kingdom."—*Edin. Phil. Journ.* No. 11.
"There is no English work that comes in competition with it, and therefore it must be regarded as supplying an important desideratum in the literature of natural history. To the student of nature, and particularly to the traveller, we would recommend it as invaluable."—*Brewster's Journal of Science*, No. 19.
"To our readers in the colonies this work is recommended in the strongest manner, by its portable form, and the comprehensive views which it gives of the subjects."—*Edin. Med. and Surg. Journ.* No. 90.
"As a manual of zoology, these Elements deserve to be recommended to general use, more strongly than any compilation of the kind, either in our own or any other language."—*Zoological Journal*, No. 154.

THE OFFICE AND DUTY OF EXECUTORS,

or, a Treatise of Wills and Executors.
By THOMAS WENTWORTH, Esq.
Of Lincoln's Inn.
With the Supplement of H. Carson, Gent. and Notes of the late Sergeant Wilson, Esq. The fourth edition, revised, and the Authorities brought down to the present time.
By HENRY JEREMY,
Of the Middle Temple, Barrister.
Printed for J. and W. T. Clarke, Law Bookellers and Publishers, Portugal Street, Lincoln's Inn.

Dedicated, by permission, to Sir Francis Freeling, price 18s. elegantly half-bound in morocco, and illustrated with Eighty-two Wood Engravings.

THE COMIC ANNUAL.

By THOMAS HOOD, Esq.
"Christmas, indeed, seems a tale more adapted for rowing in the gig or the jolly, than tugging in the barge or the galley, and accordingly I have built my craft."
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.
Where may be had, just published, by the same Author, a new edition of

Whims and Oddities, in Prose and Verse.

Second Series.
"What demon hath possessed her, that thou wilt never forsake that impudent custom of punning?"—*Scribblers*.

On the 30th of November was published, elegantly bound in silk, a new Annual for 1839.

THE ZOOLOGICAL KEEPSAKE.

Edited by EDWARD AUGUSTUS KENDALL, Esq.
Embellished with upwards of forty spirited engravings in the first style, from Drawings by Cruikshank, Baynes, and others. The contents, by some of the most popular writers for youth, and forming two hundred and fifty pages of letterpress. Price only 6s. 6d., being the cheapest Annual ever published.
The following Engravings, among others, will illustrate the Work—

1. A Bird's Eye View of the Garden of the Zoological Society, in the Regent's Park.
2. Llama of Peru, and Cashmere Goat—Black Variety.
3. A vial, containing a Variety of Small Birds.
4. Beautiful Variety of large Parrots, Cockatoos, &c. Taken from the Passage to the Llama House.
5. European Bears, and Etc., &c.
6. Beavers from North America, and House.
7. Brahmin Bull, Small Zebu, Antelope, Indian Goat, and House.
8. Cages containing Monkeys. All Varieties.
9. Reindeer of Lapland, Sambar Deer, Ostrich, and Kangaroo, &c.
10. Pelicans of Asia, and Emus of New Holland, &c.
11. An Ostrich.
12. A Kangaroo.
13. The Bat, now exhibiting at Charing Cross.
14. Monkey, Cat, Old Maid, &c. &c.
15. The Giraffe.
16. The Chimchilla.
17. Cymophorus.
18. Condor.
19. American Marmot.
20. Wild Sheep.
21. Hocco, or Crested Curlew.
22. Rastel.
23. Labradors Jumping Mouse.
24. Black-tailed Deer.
25. Menzies Sparrow, &c. &c. &c.
26. The Hair Indian Dog, &c. &c. &c.

A few Copies of the Engravings may be had, on early application, in a neat Portfolio, price 7s.
London: Printed for William Marsh and Alfred Miller, New Public Subscription Library, 127, Oxford Street.

THE TERRITORIAL GOVERNMENT

and COMMERCE OF THE EAST INDIA COMPANY.

John Murray, Albemarle Street.
THE FAMILY LIBRARY, No. VII.
(being the Court and Camp of Buonaparte), will be published on Monday next.
John Murray, Albemarle Street.

BLACKWOOD'S EDINBURGH

MAGAZINE. No. CLX. for December 1839.
Contents.—I. Notice to Subscribers. No. 47.—II. Phenomena of the Great Earthquake of 1793, in Calabria and Sicily.—III. An Essay on the Theory and the Writings of Wordsworth. Part 4.—IV. Letter from Thomas Dibdin, Esq.—V. Stanzas on seeing a recently erected Monument in the Chapel of Greenwich Hospital.—VI. Fragments on Religion in Cadix, or the Conqueror and the Curlew.—VIII. Political Prospects in Ireland.—IX. Our Domestic Policy. No. 2.—X. Monologue, or Soliloquy on the Annuals.

Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

TALES IN VERSE, illustrative of the

several Portions of the Lord's Prayer.

By the Rev. H. F. LYTE.
Printed for William Marsh and Alfred Miller, 127, Oxford Street.

Second edition, price 2s. extra boards.

RAPHAEL A Poem.

By W. D. WALKER.
Published by Thomas Griffiths, Wellington Street, Strand.

Who has published, gratis,

A Catalogue of rare and curious Pamphlets,

on Theology, Government, &c. Also,

Hawkins's Instant Binder, for Pamphlets,

Music, &c. &c.

In 3 vols. 12mo. with 14 Plates, price 11. 7s. bound in cloth.

ANNUALS OF THE PENINSULAR CAMPAIGN,

from 1808 to 1814.

By the Author of "Cyril Thornton."

Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

Of whom may be had,

The Youth and Manhood of Cyril Thornton,

2d edition. 3 vols. 12mo. 11. 1s.

In 8vo. price 6s.

A SERIES OF LETTERS TO A MAN OF PROPERTY, on Sales, Purchases, Mortgages, Leases,

Settlements, and Devise of Estates.

By Sir EDWARD B. SUGDEN.
Fifth edition.
London: J. and W. T. Clarke, Law Bookellers, Portugal Street, Lincoln's Inn.

SELF-EXAMINATIONS in EUCLID,

In 8vo. price 6s. 6d. boards,
designed for Schools and Universities.
By J. M. T. WRIGHT, B.A.

Author of "Self-Examinations in Algebra," &c. &c.

Cambridge: W. F. Grant, and the other Booksellers; and Simpkin and Marshall, and Whittaker and Co. London.

EAST INDIA AND CHINA TRADE.

A Review of the Arguments and Allegations which have been offered to Parliament against the Renewal of the East India Company's Charter.

London: Kitchingman Wilson, 65, Royal Exchange.

A TREATISE ON POISONS, in relation

to MEDICAL JURISPRUDENCE, PHYSIOLOGY, and the PRACTICE OF MEDICINE.

By R. CHRISTISTON, M.D.

Professor of Medical Jurisprudence and Police in the University of Edinburgh, &c.

Adam Black, Edinburgh; and Longman and Co. London.

BOOKS IN THE PRESS.

On the 1st of December, 1839, will be published, price 2s. 6d.

PRICE 2s.

REVIEW OF NEW BOOKS.

History of the Progress and Suppression of the Reformation in Spain in the Sixteenth Century. By THOMAS MCCOY, D.D. 8vo. pp. 424. Edinburgh, 1829, Blackwood; London, Cadell.

We dare say that, to a great majority of readers, the phrase "progress of the Reformation in Spain" will convey no idea whatever; now; but it is, nevertheless, a truth that, in the sixteenth century, the doctrine of reform made a very considerable progress in that country, and was only suppressed by the dominancy (and consequent usurping pretensions) of the Papal power over its adherents. But, even in earlier times, it is shown by Dr. M^rrie that the Spanish Roman Catholic church held itself very independent of the See of Rome, and asserted a national jurisdiction in the administration of religion extremely different from its later principles of utter devotedness to the Pope's authority.

" The ancient state of the church in Spain (says Dr. M.) is but little known. Modern writers of that nation have been careful to conceal or to pass lightly over those spots of its history which are calculated to wound the feelings or shake the propensities of their countrymen. But out from access to original documents, or even to the aid of investigating them, foreigners have generally resorted to themselves with the information which our own books supply. And knowing that Spain is to have regained their soil for the use of heretics and the Catholic faith during the three last centuries, the public, as if by general agreement, have come to the hasty conclusion that this was the fact from the beginning. • • •

" The ecclesiastical history of Spain during the first three centuries may be expressed in two facts—that the Christian religion was early introduced into that country; and that churches were erected in various parts of it, notwithstanding the persecution to which they were exposed at intervals. All beside this is fable or conjecture. That the gospel was first preached to their country by St. James, the son of Zebedee, is an opinion which has been long so popular among the Spaniards, and so identified with the national faith, that most of their writers as were most conversant of the ancient foundations on which it rests, have been turned to him in bearing testimony to its truth. The ignorance of the warm partisans of the popedom has been put to the stretch in managing the obstinate fiction with which the inhabitants of the Province have clinging to a prepossession so hazardous to the claims of St. Peter and of Rome. They have alternately exposed the fatuity of the arguments produced in its support, and granted that it is to be received on a *prima facie* opinion, resting on tradition. At one time they have urged, that the early martiries of the apostle preclude the idea of such an expedition; and at another time they have tendered their aid to recover the Spaniards from the misgovernment, and to

"obide the oblation," by suggest: e. with true Italian dexterity, that the spirit might have carried the apostle from Palestine to Spain, and after he had performed his task, conveyed him back with such celerity, that he was in time to receive the martyr's crown at Jerusalem. By such artful management, they succeeded at least in settling the doctrine, after the following manner:—that, agreeably to the continuing voice of antiquity, the first seven bishops of Spain were ordained by St. Peter, and sent by him into the Peninsula; but that, as is probable, they had been converted to the Christian faith by St. James, who despatched them to Rome to receive his orders from the prince of the apostles; from which the inference is, that St. James was the first who preached the gospel to the Spaniards, but St. Peter was the founder of the church of Spain."

This, of course, entails on the extremity of the Russian economy of St. Peter, and we will enter into the strategies of the Councils of Toledo, of many bishops, and of various sects (which sprang up from time to time), against the older tradition—since they were all, at least, compelled to yield, if not to remain, at least to bow, to the Imperialism, to barbarism, to lectures, to the stake, and the execution. A very brief illustration is at the end. After citing several cases to the same effect, the author says:—

Other instances in which the worship of the ancient gods of Spain differed widely from the modern faith is pointed out. We are already aware that a hot and constant, in the beginning of the fourth century, persecuted the worship of *Idols*, and the use of statues in churches. It may be added, that the first pope of Rome, he, in the year 55, forbade the use of incense by priests, which came afterwards to be tolerated, and were ultimately removed under the eighth pontificate. Having produced these facts as to the early origin and changes of the Spanish church, we proceed to state the manner in which she was led to adopt the rites, and submit to the authority, of the church of Rome. In the sixth century Spain was divided into three kingdoms—the kingdom of Leva and Castile of Aragon, and that of Navarre, of which the two first were as far the most powerful. In the latter part of that century, Aboon, the male of Leva, and first of Castile, after recovering Asturia to the value of the sum of 1,000,000 *Marcs* of Silver, gave the hand in marriage of Turis, who had been at the power of the Moor for two centuries and a half. He had married, for his second wife, Constantia, a daughter of the royal house of France, who, from attachment to the king who served to whom she had been betrothed, ordered the marriage of the priests who were of her, to grieve her husband to death, where the Roman king, the Count of Madrid, and a host of nobles, the papal legate, carried all the influence in favor of a charge on agreement to the court, which he represented. The king, who was warmly opposed by the clergy,

ality, and people at large, but especially by the inhabitants of Toledo, and other places which had been under the dominion of the Moors. To determine this controversy, recourse was had, according to the custom of the dark ages, to judicial combat. Two knights, clad in complete armor, appeared before the court and an immense assembly. The champion of the *but a liturgy* prevailed; but the king insisted that the contested point should undergo another trial, and he submitted to what was called, the judgment of God. Accordingly, in the presence of another great assembly, a copy of the two rival liturgies was thrown into the fire. The *but a liturgy* retained the flame, and was taken out unharmed, while the Roman was extinguished. But upon some pretext—apparently the circumstance of the salver of the Roman liturgy crawling in the top of the flames, and then leaping outside the king, with the concurrence of Bernard, arch-bishop of Toledo, who was a Frankman, gave out, that it was the will of God that both offices should be used; and ordained, that the public services should continue to be celebrated according to the *but a liturgy* in the six churches of Toledo; while the Christians had arrived under the Moors, but that the Roman office should be used in all the other churches of the kingdom. The people were greatly displeased with the glaring partiality of this decision, which seemed to have given rise to the proverb, *The law comes on horseback*. During the trial before the court and the subsequent service before the *but a liturgy*, gradually fell into disrepute, and it was consequently abandoned by the Roman

This is a very dangerous point in the case; and when the form of words proposed was strategically objected, the resignation of the Pope's power was assumed. I am to question whether it became a rather dangerous matter; for, as I have said, a liberal man might come to the barrier—

"As you declare you truly believe, 'In all that you
do and say,
And as you feel you have been taught, that you share of
blame in 'ere."
And as you declared the will of God and of St. Paul
When we were dead within your heart, now you
are worth of all.
The first is all the grace is lost, and empty in the web.
That the light has been lost, for you are, you are
you are gone."

John, Margaret, and Mary, were barbed or
harsh; and Dr. McNamee —

"During these proceedings, Rome succeeded in establishing its empire a second time in Spain, and that in a more definite form than at the close of the Roman and Augustan. The empire was enlarged considerably more to the north and north. Apparently the same old customs and of course in Spain was still, but it was not greatly from the south in the fifteenth century. The beginning of this period was marked by the influence of that empire of empire, and courage of all decency, and based on numerous murders."

The interest attached to this important speech has caused us to suggest extracts that we are now placing in our calendar; and we now place in our 1906-7 our contents and man-

sacres, to the chapter on the literature of Spain before the era of the Reformation, which we find to be a very attractive view of that more pleasing subject.

"It is not (observes our author) to the credit of Christianity, or at least of those who professed it, that, during the middle ages, letters were preserved from extinction, and even revived from the decline which had seized them, by the exertions of the followers of Mahomet. The tenth century, which has been denominated the leaden age of Europe, was the golden age of Asia. Modern writers have perhaps gone to an extreme on both sides in forming their estimate of the degree in which European literature is indebted to the Arabians. But when we find that this people have left such evident marks of their language upon that of Spain, it seems unreasonable to doubt that they had also great influence upon its literature. Cordova, Granada, and Seville, rivalled one another in the magnificence of their schools and libraries during the empire of the Saracens, who granted to the Spanish Christians, whom they had subjugated, that protection in their religious rights, which the latter were far from imitating when they in their turn became the conquerors. The two languages were spoken in common. The Christians began to vie with their masters in the pursuit of science, composed commentaries on the Scriptures in Arabic, and transfused the beauties of eastern poetry into the Castilian language. It is even said, that a bishop of Seville, at this early period, translated the Scriptures into the Arabic tongue. If the Spanish language was in danger of suffering from the predominance of the Arabians, the evil was counteracted by the cultivation of Provençal poetry. In the twelfth century, Alfonso II. of Aragon, whose name has an honourable place among the Troubadours, zealously patronised those who wrote in the Catalan or Valencian dialect. In the subsequent century, Alfonso X. of Castile, surnamed the Wise, shewed himself equally zealous in encouraging the study of the Castilian tongue, in which he wrote several poems; at the same time that he extracted the knowledge which was to be found in the books of the Arabians; as appears, among other proofs, from the astronomical tables, called from him Alphonsine. The writings of Dante, Chaucer, and Petrarch, gave a new impulse to the literature of Spain. From this period the study of the ancient classics imparted greater purity and elevation to works of imagination; and a taste for poetical compositions in their native tongue began to be felt by the Spanish gentry, who had hitherto found their sole pastime in arms and military tournaments.

"It is not unworthy of remark here, that the Jews, while they enjoyed protection in Spain, co-operated with the Christians in the cultivation of polite letters. Rabbi Don Santo, who flourished about the year 1360, makes the following modest and not inelegant apology for taking his place among the poets of the land which had given him birth:—

"The rose that twines a thorny sprig
Will not the less perfume the earth;
Good wine, that leaves a creeping twig,
Is not the worse for humble birth.

The hawk may be of noble kind
That from a filthy eyrie flew;
And precepts are not less refined,
Because they issue from a Jew.*

* "Por nacer en espino
La rosa, ya non aiento
Que pierde, ni el buen vino
Por salir del sarmiento.
Nin vale el asor menos,
Porque en vil nido alga;

Long after their expulsion from Spain, the Jews cherished an ardent attachment to the Castilian tongue, in which they continued to compose works both in prose and verse."

The oriental languages, as well as the Arabic, were sedulously cultivated in Spain; and many works of the highest order, especially in theology, were produced by learned natives. Among the most famous was the vaunted Polyglot of Alcalá, which, however, does not seem to merit all the panegyrics bestowed upon it.

It is not within our limits to follow our author farther; but we have said enough to recommend his work as one of great research, value, and interest. Suffice it to add, that in conclusion, he attributes to the suppression of the Reformation in Spain (as in his former work he contended for the same results in Italy) the crushing of genius, taste, learning, and industry, and the consequent decline of these countries in the scale of Europe.

Tales of an Indian Camp. 3 vols. 12mo. London, 1829. Colburn and Bentley.

An immense share of industry has been bestowed on his subject by the author of these Tales, and curious to a degree are the various traditions he has collected: but, as a whole, the stories have a degree of sameness and puerility that make them fatiguing for a continued perusal. As illustrations, however, of an extraordinary people, they may be relied on by the lovers of antiquarian lore; and many of the tales are interesting as well as singular. We shall endeavour to choose one whose characteristics will best illustrate the general likeness of Indian historical fable.

"*The Story of the Maqua that married a Rattlesnake.*—Once upon a time, as Cayenguirago was hunting alone in the wilderness, in a spot which the Great Spirit had forgotten to level, he came to a great cave in the side of a hill. It was in the time of winter, and the hour of a fearful fall of rain and hail. To escape the wrath of the spirits of the air, he entered this deep cave in the side of the hill, carrying with him much wood, and the spoils he had won in the chase. As he entered it he heard many strange and fearful noises; but Cayenguirago was a warrior, though a wicked one, and little troubled at any time by frightful sounds, he pursued his way into the interior of the cave. It was dark as a cloudy night in the time that follows the death of the moon; but he remarked that the cave was lit up, and the darkness partially dispelled, by what appeared to be little stars, exceedingly bright substances which resembled the eyes of a wolf, though smaller and far brighter, and which were continually shifting about the cave with a slow and uncertain motion. Then for sound there was an incessant rattling, and hissing, and slapping, which almost stunned him with noise. As he moved on, he found himself impeded by something into which his feet were continually settling, and which he judged to be loose sand. When he had gone far enough from the entrance to be free from the current of air which entered the cavern by it, he laid down the deer's flesh which he had brought upon his back, took out his flint and tinder-box, and struck fire. Having properly disposed of the wood he had brought, and kindled a flame, he raised himself to an upright posture to survey the cavern. Who shall describe the terror which filled the soul of Cayenguirago, stout and fearless as he was, when he found himself in the middle of an immense

body of rattlesnakes, and perceived that it was among these deadly animals, of which there was a thick layer upon the floor of the cave, that he had been for some time wallowing? Their eyes it was that lit up the cavern, and theirs were the hissing, and rattling, and slapping, which saluted his ears. Under his feet and upon every side of him, as far as the eye could reach, were heads upreared with little fiery tongues projecting from green jaws, and moving with a motion more rapid than a flash of summer lightning. The heads about the cavern were thicker than the thievish ravens in a field of milky corn. The moment that the light of the fire he had kindled enabled them to see the intruder, all of them rushed towards him, though none attempted to inflict injury. The nearest approached within a step; those behind climbed over the backs of the more advanced, until they lay piled up on every side as high as the shoulders of a tall man. Surrounded, as Cayenguirago was, by the most venomous and dreadful of all the animals formed by the Great Spirit, he did not forget to keep his fire burning, nor to draw out his pouch filled with good tobacco. Having recovered his coolness and composure, and become a man again, he filled his pipe with the beloved weed, and, lighting it, began to roll out clouds of smoke. Each time he puffed he observed that the snakes retreated further from him, until at length they were seen gliding into the darkness which enshrouded the further part of the cavern. While he lay thus warming himself at the fire, and emitting clouds of fragrant smoke, some one near him exclaimed, in a very sharp and shrill voice, 'Booh!' Looking up, Cayenguirago beheld standing behind him a very ugly creature,—but whether man or beast, he found it at first difficult to determine. His skin was black as soot, and his hair white as snow. His eyes, which were very large, were of the colour of the green far-eyes [spectacles] with which the pale faces survey distinct objects, and stood out so far from the head, that had one of them been placed in the middle of the forehead, a tear dropping from it would have hit the tip of the nose. His teeth, which were very large, were white as snow; his ears, which were yellow, were smaller than the leaf of the black walnut, and shaped exactly like it. His legs were not shaped like those of a human being, but were two straight bones without flesh or joint, and both black and glossy as charred birch. But what rendered him yet more horrible to look at was, that snakes, poisonous rattlesnakes, were wreathing themselves around his legs, and body, and arms—leaping from him and upon him, tying themselves in knots around his neck, and doing other feats of horrid agility. After surveying this uncouth being and his fearful companions for a few moments in deep silence, Cayenguirago addressed him thus:—'Who art thou?' 'Thy master,' 'The Maqua is a man,' replied the warrior fiercely; 'his knees was never bowed—he acknowledges no master.' 'Thou hast served me long and well, Cayenguirago—I am Abamocho, the Spirit of Evil, and this is my dwelling-place.' 'Thou hast chosen a dark abode, and strange companions,' replied the warrior. 'They are not my companions, but my warriors, my braves, my tormentors,' answered the Spirit of Evil. 'It is with thee that I torment bad people, as the Maquas or old women to torment the prisoners they take in battle. But fear not, Cayenguirago, thou hast been a faithful servant to me—I will not suffer my people to harm thee. Do

Nin los exemplos buenos,
Porque Judío los diga."

thou know that I design to bestow my daughter upon thee for a wife?" "I did not know it," answered the Maqua. "She shall be thine," said the Evil Spirit; "but I warn thee that there have been very many pleasanter companions than she will make thee, for she is excessively irritable and passionate. Withal, she is so fond of admiration, that I have no doubt she would give chase to the ugliest toad that ever devoured a worm, so she could captivate him. She is a true woman." "What will the father give the Maqua that marries her?" "Wampum, much wampum—" "I will take her." "Many beaver-skins, and much bear's meat—" "Cayenguirago will make her his wife." "Revenge against the Hurons who slew so many of his warriors in the last Beaver-moon. He shall drink their blood in plentiful draughts, he shall eat their children roasted in the fire, and feed his men upon broth made of the flesh of their braves." "She is mine!" "Dost thou know that she is a rattlesnake?" "I care not, so she bring me as her portion the rich presents and the sweet revenge thou hast spoken of. Shall the Maqua behold the maiden?" "He shall, but the father bids him remember one thing. When the marriage has taken place, let not the husband forget to cut off his wife's tail. Upon his remembering this injunction his life depends. If he forget it, the bride will be a widow ere she is a wife." With this the Spirit departed into the inner part of the cavern. He soon returned, bringing with him a huge, unwieldy rattlesnake. "This," said he, as he came up to the Maqua, "is the maiden I spoke of, and the wife I have long destined for thee. She is rather taller than need be—she will eat the less, however. Take her, thou hast been a good servant, and I owe thee a reward." * * * The Maqua turned around to his bride, and spoke to her kindly, telling her how happy they should live, and many other things usually said in such cases, and proving true as often as larks fall from the skies. The Evil Spirit now spoke to Cayenguirago, bidding him follow him to an inner room in the cavern, and finish the marriage at once. He obeyed, leading his purvey bride by a string which he tied around her neck. The whole body of rattlesnakes followed the couple—hissing, and slapping, and rattling their tails, and running out their forked tongues; but, whether for joy or sorrow, Cayenguirago either cared nothing, or did not think it worth his while to inquire. At last they came to a small room, which was lighted up by a great blue fire burning in the centre. This, the Evil Spirit said, was his daughter's chamber, and there they would pass the night, upon which the maiden pretended to be much ashamed. The couple now went through the Indian form of marriage, and the Maqua became the husband of the rattlesnake, daughter of the Evil Spirit, Abamocho. They spent the evening very pleasantly together; and so well was Cayenguirago entertained with the pleasant stories she told him, and her wit, and good humour, and the kisses she gave him, that he entirely forgot the advice of her father. So, after they had spent some time in talk and fondling, the bride crept to her bed of leaves, and the husband followed. By and by the Maqua said to his wife, "Thy flesh is very cold—lie a little further off." "My flesh is warm," answered the other; "but thou hast drawn to thy side all the covering, and the spirit of cold is breathing harshly upon me from the distant cavern." Upon that they fell to disputing fiercely about love, and hatred, and cold, and many other things which need

not be mentioned here. Louder and louder rose their voices, and more violent grew the dispute, until the wife, losing the very little patience she possessed, applied the deadly sting, which dooms to instant death, to bring her husband to her side of the argument. A horrid shout told the creeping of the subtle poison through his veins. Few were the moments that elapsed before he lay a stiffened, and swollen, and blackened corpse. And thus perished the wicked Maqua that married a rattlesnake and forgot to cut off her tail."

We think the fabulous framework given to these tales very injudicious; particularly as the writer has been at much pains to quote his authorities, which are, we doubt not, true pictures of the manners and customs, superstitions, &c. they delineate.

Dr. Arnott's Elements of Physics, or Natural Philosophy, general and medical, explained independently of Technical Mathematics, and containing new Disquisitions and practical Suggestions. 8vo. Vol. II. Part I. comprehending the subjects of Heat and Light: and a fourth edition of Vol. I. Longman and Co.; and Underwoods.

To indicate the merits of the work here continued, we need scarcely say more than that, since the time when we first directed notice to it, two years ago, although it was published incomplete, was the first literary production of the author, and had to make its way entirely by interesting its readers—there have been already demanded four large editions of Volume I., besides various editions in North America, and a translation in France with algebraical formulae added, to fit it for the system of instruction pursued in the French schools and colleges. In England it is now general, not only in the cabinets of the scientific, but in our parlours, and in schools for either sex. The part at present published on the subjects of Heat and Light is, if possible, more interesting than that which preceded, and, having been written at the same period, has the same characteristics.

In the vast mass of human knowledge, of which only a part can be exhibited even in an encyclopædia of a hundred volumes or more, and which knowledge it greatly surpasses the capacity of any one mind to retain, there is still on every subject a portion which the man of judgment and taste makes it the business of his early life to cull or select from all sources, and to form of it the permanent furniture and ornament of his mind and his ever present direction in the general affairs of life. Such knowledge in the department of natural philosophy our author has attempted in the present treatise to condense. He holds that five such treatises (viz. on the five great divisions of knowledge) would contain the great body of information required in a liberal education; while for every separate profession, individuals would have to study, additionally, special treatises on the profession, and to follow courses of practical instruction.

The merit of this work, however, is not confined to the selection and arrangement into a symmetrical and consistent whole, of a vast mass of most useful knowledge; there are in it also many new disquisitions and practical suggestions. As an instance generally interesting, and bearing on the profession of the author, we shall copy his new and very simple explanation and cure of the defect in speech called Stuttering, given in Vol. II. as an appendix to the chapter on Articulation in Vol. I.

"The most common case of stuttering

is not, as has been almost universally believed, where the individual has a difficulty in respect to some particular letter or articulation, by the disobedience to the will or power of association of the parts of the mouth which should form it; but where the spasmodic interruption occurs altogether behind or beyond the mouth, viz. in the glottis, so as to affect all the articulations equally. To a person ignorant of anatomy, and therefore knowing not what or where the glottis is, it may be sufficient explanation to say, that it is the slit or narrow opening at the top of the windpipe by which the air passes to and from the lungs, being situated just behind the root of the tongue. It is that which is felt to close suddenly in hiccup, arresting the ingress of air, and that which closes to prevent the egress of air from the chest of a person lifting a heavy weight or making any straining exertion; it is that also by the repeated shutting of which a person divides the sound in pronouncing several times, in distinct and rapid succession, any vowel, as o, o, o, o. Now the glottis during common speech need never be closed, and a stutterer is instantly cured if, by having his attention properly directed to it, he can keep it open. Had the edges or thin lips of the glottis been visible, like the external lips of the mouth, the nature of stuttering would not so long have remained a mystery, and the effort necessary to the cure would have forced itself upon the attention of the most careless observer; but because hidden, and professional men had not detected in how far they were concerned, and the patient himself had only a vague feeling of some difficulty, which, after straining, grimace, gesticulation, and sometimes almost general convulsion of the body, gave way, the uncertainty with respect to the subject has remained. Even many persons who by attention and much labour had overcome the defect in themselves, as Demosthenes did, have not been able to describe to others the nature of their efforts, so as to ensure imitation: and the author doubts much whether the quacks who have succeeded in relieving many cases, but in many also have failed, or have given only temporary relief, really understood what precise end in the action of the organs their imperfect directions were accomplishing. Now a stutterer, understanding of anatomy only what is stated above, will comprehend what he is to aim at, by being farther told, that when any sound is continuing, as when he is humming a single note or a tune, the glottis is necessarily open, and therefore, that when he chooses to begin pronouncing or drowning any simple sound, as the e of the English word *berry* (to do which at once no stutterer has difficulty), he thereby opens the glottis, and renders the pronunciation of any other sound easy. If, then, in speaking or reading, he joins his words together, as if each phrase formed but one long word, or nearly as a person joins them in singing (and this may be done without its being at all noted as a peculiarity of speech, for all persons do it more or less in their ordinary conversation), the voice never stops, the glottis never closes, and there is of course no stutter. The author has given this explanation or lesson, with an example, to a person who before would have required half an hour to read a page, but who immediately afterwards read it almost as smoothly as was possible for any one to do; and who then, on transferring the lesson to the speech, by continued practice and attention, obtained the same facility with respect to it. There are many persons not accounted peculiar in their speech, who, in seeking words to express themselves, often rest long

between them on the simple sound of *e* mentioned above, saying, for instance, hesitatingly, 'e Ithink e.....you may,'—the sound never ceasing until the end of the phrase, however long the person may require to pronounce it. Now a stutterer, who to open his glottis at the beginning of a phrase, or to open it in the middle, after any interruption, uses such a sound, would not, even at first, be more remarkable than, a drawing speaker, and he would only require to drawl for a little while, until practice facilitated his command of the other sounds. Although producing the simple sound which we call the *e* of *berry*, or of the French words *de* or *que*, is a means of opening the glottis which by stutterers is found very generally to answer, there are many cases in which other means are more suitable, as the intelligent preceptor soon discovers. Were it possible to divide the nerves of the muscles which close the glottis, without at the same time destroying the faculty of producing voice, such an operation would be the most immediate and certain cure of stuttering; and the loss of the faculty of closing the glottis would be of no moment. The view given above of the nature of stuttering and its cure explains the following facts, which to many persons have hitherto appeared extraordinary. Stutterers often can sing well, and without the least interruption, for the tune being continued, the glottis does not close. Many stutterers also can read poetry well, or any declamatory composition, in which the uninterrupted tone is almost as remarkable as in singing. The cause of stuttering being so simple, as above described, one rule given and explained may, in certain cases, instantly cure the defect, however aggravated, as has been observed in not a few instances; and this explains also why an ignorant pretender may occasionally succeed in curing, by giving a rule of which he knows not the reason, and which he cannot modify to the peculiarities of other cases. The same view of the subject explains why the speech of a stutterer has been correctly compared to the escape of liquid from a bottle with a long narrow neck, coming—'either as a hurried gush or not at all:' for when the glottis is once opened, and the stutterer feels that he has the power of utterance, he is glad to hurry out as many words as he can, before the interruption again occurs."

The following are further extracts to exemplify the style of the work, and the nature of the subjects treated.

Importance of Heat.—"In the winter of climates where the temperature is for a time below the freezing point of water, the earth with its waters is bound up in snow and ice, the trees and shrubs are leafless, appearing every where like withered skeletons, countless multitudes of living creatures, owing either to the bitter cold or deficiency of food, are perishing in the snows—nature seems dying or dead; but what a change when spring returns, that is, when heat returns! The earth is again uncovered and soft, and rivers flow, the lakes are again liquid mirrors, the warm showers come to foster vegetation, which soon covers the ground with beauty and plenty. Man, lately inactive, is recalled to many duties; his water-wheels are every where at work, his boats are again on the canals and streams, his busy fleets of industry are along the shores—winged life in new multitudes fills the sky, finny life similarly fills the waters, and every spot of earth teems with vitality and joy. Many persons regard these changes of season as if they came like the successive positions of a turning

wheel, of which one necessarily brings the next; not adverting that it is the single circumstance of change of temperature which does all. But if the colds of winter arrive too early, they unfailingly produce the wintry scene; and if warmth come before its time in spring, it expands the bud and the blossom, which a return of frost will surely destroy. A seed sown in an ice-house never awakens to life. Again, as regards climates, the earthy matters forming the exterior of our globe, and therefore entering into the composition of soils, are not different for different latitudes,—at the equator, for instance, and near the poles. That the aspect of nature, then, in the two situations exhibits a contrast more striking still than between summer and winter, is owing merely to an inequality of temperature, which is permanent. Were it not for this, in both situations the same vegetables might grow, and the same animals might find their befitting support. But now, in the one, namely, where heat abounds, we see the magnificent scene of tropical fertility: the earth covered with luxuriant vegetation in endless lovely variety, and even the hard rocks festooned with green, perhaps with the vine, rich in its purple clusters. In the midst of this scene, animal existence is equally abundant, and many of the species are of surpassing beauty—the plumage of the birds is as brilliant as the gayest flowers. The warm air is perfume from the spice-beds, the sky and clouds are often dyed in tints as bright as freshest rainbow, and happy human inhabitants call the scene a paradise. Again, where heat is absent, we have the dreary spectacle of polar barrenness, namely, bare rock or mountain, instead of fertile field; water every where hardened to solidity, no rain, nor cloud, nor dew, few motions but drifting snow; vegetable life scarcely existing, and then only in sheltered places turned to the sun—and instead of the palms and other trees of India, whose single leaf is almost broad enough to cover a hut, there are bushes and trees, as the furze and fir, having what may be called hairs or bristles in the room of leaves. In the winter time, during which the sun is not seen for nearly six months, new horrors are added; viz. the darkness and dreadful silence, the cold benumbing all life, and even freezing mercury—a scene into which man may penetrate from happier climes, but where he can only leave his protecting ship and fires for short periods, as he might issue from a diving-bell at the bottom of the ocean. That in these now desolate regions, heat only is wanted to make them like the most favoured countries of the earth, is proved by the recent discoveries under-ground of the remnant of animals and vegetables formerly inhabiting them, which now can live only near the equator. While winter then, or the temporary absence of heat, may be called the sleep of nature, the more permanent torpor about the poles appears like its death; and when we further reflect, that heat is the great agent in numberless important processes of chemistry and domestic economy, and is the actuating principle of the mighty steam-engine which now performs half the work of society, how truly may heat, the subject of our present chapter, be considered as the life or soul of the universe!"

Difference of conducting power in bodies.—It is the difference of conducting power in bodies which is the cause of a very common error made by persons in estimating the temperature of bodies by the touch. In a room without a fire all the articles of furniture soon acquire the same temperature; but if, in win-

ter, a person with bare feet were to step from the carpet to the wooden floor, from this to the hearth-stone, and from the stone to the steel fender, his sensation would deem each of these in succession colder than the preceding. Now the truth being, that all had the same temperature, only a temperature inferior to that of the living body, the best conductor, when in contact with the body, would carry off heat the fastest, and would therefore be deemed the coldest. Were a similar experiment made in a hot-house, or in India, while the temperature of every thing around were 98°, viz. that of the living body, then not the slightest difference would be felt in any of the substances; or, lastly, were the experiment made in a room where by any means the general temperature were raised considerably above blood heat, then the carpet would be deemed considerably the coolest instead of the warmest, and the other things would appear hotter in the same order in which they appeared colder in the winter room. Were a bunch of wool and a piece of iron exposed to the severest cold of Siberia, or of an artificial frigorific mixture, a man might touch the first with impunity (it would merely be felt as rather cold); but if he grasped the second, his hand would be frost-bitten and possibly destroyed: were the two substances, on the contrary, transferred to an oven, and heated as far as the wool would bear, he might again touch the wool with impunity (it would then be felt as a little hot), but the iron would burn his flesh. The author has entered a room where there was no fire, but where the temperature from hot air admitted was sufficiently high to boil the fish, &c. of which he afterwards partook at dinner, and he breathed the air with very little uneasiness. He could bear to touch woollen cloth in this room, but no body more solid. The foregoing considerations make manifest the error of supposing that there is a positive warmth in the materials of clothing. The thick cloak which guards a Spaniard against the cold of winter, is also in summer used by him as protection against the direct rays of the sun: and while in England flannel is our warmest article of dress, yet we cannot more effectually preserve ice than by wrapping the vessel containing it in many folds of softest flannel."

These passages must suffice for the present: next week we purpose continuing our selections from this very able work.

The Landscape Annual: the Tourist in Switzerland and Italy. By Thomas Roscoe. Illustrated with Drawings by S. Proust, Esq. Painter in Water-Colours to his Majesty. London, 1830. R. Jennings.

THIS Annual, with better title than most of its contemporaries, appeals to the eye rather than to the understanding of the public; for we are not aware that it founds much of its pretensions on the literary portion of its alliance with the Fine Arts: yet the tourist's accounts of the various scenes and places represented are altogether agreeable reading enough: with little of novelty to recommend them, but compiled from preceding travellers, topographers, and poets; so that the descriptions altogether form a *mélange* neither ill suited to the engravings nor to while away an hour of ennui,—if such could ensue after looking over Mr. Proust's picturesque and graphic productions.

The work has, we believe, been published some time, (though we had not seen it till late this week,) and we are glad to hear that so new a design has met with much encourage-

ment. This must, in great measure, be attributed to the beauty of the artist's subjects, and to the circumstance of comparatively few of his paintings having hitherto been engraved. And here we have no fewer than twenty-five plates, executed under the able direction of C. Heath; together with a charming vignette of the Arch of Constantine at Rome. When we farther mention, that the prints, almost all delightful, (though, after all, steel, with its hard outline, is not so good a medium for some landscapes, especially on a small scale, as copper, or even lithography,) comprehend the Castle of Chillon, the Bridge of Sighs, the Rialto, the Palace of the Foscari, and other interesting views; besides excellent things of Geneva, Lausanne, Milan Cathedral, Como, Verona, Vicenza, Ponte Sisto at Rome, &c. &c. On the whole, it strikes us as a strong proof of the correctness of the opinion to which we had come on considering the *Annals* generally,—either that they ought to be limited to the portfolio, or greatly elevated in their literary character,—that this volume, with the designs by a single artist, and of one class, should be quite as successful as its more ambitious contemporaries.

Dews of Castille. By J. Johns. 12mo. pp. 226. London, 1828. Hunter.

THE productions of a young man, but one of evident taste and feeling. Most of the poems have gone the round of the *Magazines* and *Annals*; but we hope the following piece, which has pleased us much, will be acceptable, if not new, to our readers: it is entitled "the Poet's Mourner," and is a pretty and melancholy poem.

"Life for me is past and over—
I have lost my minstrel lover!
This fond heart's divinest chord
Broke with thine, my laurel'd lord!
Round the spot thy dust that paveth,
Many a tear the marble laveth;
But among them whose can fall
Wild as her's who weeps her all!
Yet oh, what to thee availeth,
That one voice above thee waileth?
In thy bower of glories o'er
Love nor grief shall reach thee more.
Silent there the voice of sadness—
Powerless there the pang of madness;
With this vain world thou hast done,
And thy weary race is run.
Of the splendid sorrows round thee,
And of all to earth that bound thee,
Glory's rainbow rests alone,
Shining round a cold grave-stone.
Glorious sleeper! yet thy spirit
Shall the wreath it sought inherit:
Proud the mead that waiteth thee—
Mortal immortality!
But the fame which mocks the sleeper,
Can it cheer the living weeper?
There are hearts decreed to know
Glory but embitters wo.
Yet, since all beside has perished,
More, oh more, shall this be cherished;
And thy fame shall be to me
Sacred as thy memory.
Fare thee well, my minstrel lover—
Life for me is past and over:
This fond heart's divinest chord
Broke with thine, my laurel'd lord!"

Some of the legendary ballads are equally well written.

Some Account of Edward Ruppel, and his Travels in Northern Africa.

REFERRING to our preceding accounts of this interesting expedition, we have to state that the next tidings of our enterprising traveller are communicated in a letter from Cairo, of the 27th July, 1824, when he deploras the loss of his instruments and the property he had left behind at Esné, during the unsuccessful revolt of Upper Egypt. In returning to Don-

gola, he says: "I stopped at the ruins of Solib, in order to ascertain their geographical position: I had been led into error by Burckhardt's report, and concluded that they were the ruins of Napata: such a conclusion, however, is incorrect, for there is not the slightest vestige near Solib of the existence of so flourishing a spot as Napata must have formerly been: the only object to be discovered there is the remains of a magnificent, though isolated, palace. Napata was probably three leagues and a half to the north of Solib, where the ruins of Sheik-sélim are extant; and these are known among the Barabras by the name of Sedegne, or ruins. In this last locality are seen the walls of several private dwellings, besides the remains of two temples; whereas, nothing of the kind exists near what must once have been the colossal palace of Solib. A high wall encloses its whole area, which comprises several courts. The first of these is one hundred and ninety-two feet long, and one hundred and seven broad, and its entrance is guarded by two lions-couchants of granite: it is closed to the west by two prismatic gates, leading to a second court, which is seventy-six feet long and ninety-two feet broad. It is encircled by an open portico with a colossal colonnade; and a double row of columns on its western side forms a species of peristyle. Within the centre of the palace is a hall forty feet long and fifty-four broad. Twelve colossal columns support the ceiling, and their capitals consist of branches of the palm-tree: the columns in the court are sculptured in imitation of palm-trees interwoven, like those in the great temple of Lugsor. No hieroglyphics exist but such as are found on the columns and architraves; they are scanty in number, though skillfully carved. The whole structure has suffered greatly from the waste of time; and of the eighty-six columns by which it was adorned, there are but nine standing. The material used throughout is a brownish freestone."

In September following, we find him at Dongola, where the severe illness of Hey again arrested his journey into Kordofan, an almost unknown land, until the month of December. During this interval, however, they made a hunting excursion to Sukkot, which forms an interesting episode in the traveller's narrative:

"On this excursion, with the aid of natives trained to the task, we were fortunate enough to kill one crocodile and two hippopotami in nine days. One of the latter is thirteen feet long; his eye-teeth are each of them eighteen inches in length, from the root to the point. This colossus did not give up the ghost until five balls, discharged at twenty paces' distance, had nearly shivered his skull in pieces; the encounter took place in the night-time, and lasted no less than five hours: the strength of eighteen men was scarcely sufficient to drag the body out of the water. But I have something even more incredible to relate: Hey, unassisted by any one but myself, has made a perfect preparation of the hides of the three animals, and the skeletons of two of them. Unhappily our friend's strength is utterly exhausted."

He then mentions his intention of exploring Kordofan alone, and sending Hey back to Cairo for his health, as well as to superintend the forwarding of their rich collections to Europe. "In this consignment," he adds, "you will find two large crocodiles and their skeletons, independently of our four hippopotami. But it is impossible for me to describe the joy I experienced from discovering that the Nile affords shelter to two species of the former ani-

male—the *crocodilus vulgaris*, Linn., and the *crocodilus multiscutatus*, Mus. Francof. The distinction between the two had been long known to the natives, who were the first to draw my attention towards it. . . . I purpose visiting Kordofan almost alone; for I shall take no more than two servants and a slave with me; and should I roam into the desert in pursuit of giraffes, I shall leave even this scanty escort behind, as I am unwilling that others should lose their lives through my obstinacy."

The extracts which follow, from his subsequent correspondence, bear evidence of the success, as well as the dangers and difficulties, which Ruppel met with in his pilgrimage to the *terra penè incognita* of Kordofan. "On the 22d of December I quitted Dongola, and went by water to Dabbe, where I found my ten camels which had journeyed overland. Abdin-bey was anxious that I should traverse the desert of Simri with a large caravan, and had preceded me by a courier, who had orders to detain all the traders journeying towards Kordofan, until I reached Dabbe. But unfortunately, the whole of them—and they were three hundred in number—had taken their departure two days before the courier's arrival. I set out, therefore, almost unattended; for the whole number of my companions did not exceed seventeen. I have reason to be thankful that I reached Obeid (Ibeis) in safety on the 13th of January, and experienced no other mishap but the loss of two camels. I was scarcely housed within the capital of Kordofan before I was invalidated by the salt-wells' water, which appeared to disagree with my bilious constitution. A few days afterwards an attack of jaundice came on, and detained me another fortnight."

"When at Dongola, Mohammed-bey-tefderdar, the pasha's son-in-law, with whom I had become acquainted at Shendi, and by whom the government of all the conquered provinces, south of the Wadi-Halfa, had been recently administered, had given me, among other letters, one to the leading sheik of the Arab tribe Hammer. This tribe, who lead a wandering life near Omsemime, on the frontiers between Kordofan and Darfour, are particularly devoted to the hunting of giraffes; and my letter of introduction ordered them to kill two of them for my use. By adding presents and promises to this order, I was in great hopes that my darling wish would at last be gratified: but my patience was to be put to a fresh test. The Arabs of Darfour, who were hostile to my intended guests, surprised them, slew eighty-seven men, and carried off a large booty in slaves and camels. On the 29th of January I left Obeid, in search of the Hammer-Arabs, and, shortly after I had joined them, was made exceedingly uneasy by their spies reporting, that a fresh incursion from the Darfour side was to be feared. Every thing was placed in a state of defence; but we got off on this occasion without any other inconvenience than our alarm. I now lost no time in despatching hunters into the untenanted district towards Darfour; and at the end of eleven days, they brought me back two beautiful giraffes, a male and female. I succeeded in preparing their skins, and a skeleton of the largest. The male is somewhat more than fifteen feet in perpendicular height, from the top of the head to the ground. . . . You will learn with pleasure, that by my own unassisted exertions, I have been enabled, in the space of thirty-five days, to collect sixty-five mammiferous animals, one hundred and sixty birds, with twelve

skeletons, and five amphibious animals and one skeleton, besides molluscæ, &c. It was not the season for insects and plants."

The next excursion which Ruppel made was into the mountainous desert to the south of Korté and Ambukol: from which, under the escort of two and twenty Arab horsemen, and nearly forty infantry, he brought a rich booty back with him, the most remarkable feature in it being no less than five giraffes. After resting some months at Cairo, for the purpose of re-establishing his health, packing up his valuable collections, and despatching them to Europe, he set off, in February 1826, on a journey of inspection through the northern confines of the Red Sea, among which he visited Mount Sinai, where he found the wild goat from which our own "Billies and Nannies" are descended. The sickness of most of his companions compelled him to return to Cairo in the month of August; but he availed himself of the opportunity thus afforded him of sending off his spoils, which comprised, amongst other specimens, eighty-six skins of mammiferæ, one hundred and fifty-four of birds, sixty-two of amphibious animals in spirits, one hundred and twenty of fish, and fifty-eight species of crabs, molluscæ, &c.

Towards the close of September, Ruppel again quitted Cairo; and having rejoined his fellow-travellers, whom he had left at Tor, he embarked for Massouah. "Never," says he, "were my equipments more complete than upon the present occasion. In order to push my researches still further along the eastern districts of Abyssinia, I have hired a second chasseur. I have great hopes of this Abyssinian expedition. If I succeed to the extent of my ardent wishes, and track the fawn of this region to its haunt, we shall ship ourselves back, at Massouah, in June 1827, land at Gidda, return to Cairo in the autumn, explore the Delta, and in the spring of 1828 I trust to find, at the hands of my old friends, a cheering and renovating welcome after all my fatigues."

The produce of this expedition was indeed most brilliant, and far exceeded in value any collection he had before presented to the Frankfurt Museum. Hey had returned to that city in the latter part of the year preceding; and in September 1827, Ruppel himself—than whom no wayfarer in foreign lands has ever evinced a more ardent, disinterested, and indefatigable spirit—landed at Leghorn, after a six years' absence in Africa. He spent the autumn and winter of that year in Italy; and having perfectly regained his health, finally reached his native home on the 29th of March, 1828, where he was welcomed with those demonstrations of heartfelt attachment and gratitude, to which his eminent patriotism, and the services he has rendered to the scientific world, so justly entitled him.

We have seen the first twelve Numbers of the Zoological Atlas, which precedes the publication of his Travels: they are got up in a style and with a care which are alike creditable to Ruppel and to the society of Senkenberg, by whom it is sent forth into the world. The text—which proceeds from the pen of Dr. Cretschmar, its president, aided by the notices of the traveller—combines a perfect mastery of the subject, in a scientific point of view, with a degree of animation and amusement in the details, which would render the work a popular companion of our tables, had not the learned editor closed its pages to so many thousands, by confining his version to the German language. The work is of too high a character that its portals should not be opened to the

universal world of science; and we earnestly recommend, therefore, the addition of a French version to the future numbers of this valuable publication.

The Animal Kingdom described and arranged in conformity with its Organisation, by the Baron Cuvier, Member of the Institute of France, &c. Translated, with large additional Descriptions of many Species not hitherto named, and other original Matter, by Edward Griffith, F.L.S. and others. Part XXI. Class Aves. London, 1829. Whitaker, Treacher, and Co.

If, as no one can deny, the study of the animated productions of nature be one of the most delightful that can occupy the attention of man, it is equally true, that of that wide and varied kingdom, the chosen province, the very paradise, is the birds. The gracefulness of their forms, the exquisite delicacy of their covering, the inimitable brilliancy of their colours, the light and life-giving transparency of the element in which they live, the singular variety of their habits, the delightful melody of their songs, and the most singular fact, that, with organs apparently more unfitted for articulation than many of the quadrupeds, they are the only animals that can imitate man in the wonders of voice, and rival him in the intricacy of music: these, and a thousand other qualities, with the bare enumeration of which we could fill a number of our journal, render the study of birds a favourite of every elegant mind. Even the fleetest of quadrupeds is heavy and lumbering, in comparison. We boast of the greyhound, which lies panting and breathless upon the earth if it courses round a moderately-sized field, or the race-horse that is exhausted with a three-mile heat; but what are these to the little Swift, that can awaken from the eaves of an English cottage in the morning, and nestle in the date-tree on the borders of the great desert of Sahara before the sun be down. That little twitterer is the very Puck of creation: it cannot, indeed,

"Put a girdle round about the earth
In forty minutes;"

but, at the rate of 250 miles an hour, which is considerably within the computation of Spallanzani, it can cincture the globe in less than four days, and thus be from England to Africa in the brief space of four hours: even the eider-duck, apparently unwieldy as it is, could breakfast in Eastness, and sup in Kent; and, let the storm blow its worst, the golden eagle can dash right in the teeth of it at the rate of forty miles an hour.

In a study which is so pleasing, it is quite refreshing to think that there is a work, in a form accessible to all, and so full and so varied, that each may find that which is more immediately interesting. Such is the translation now before us; in which the text of the illustrious Baron Cuvier is faithfully given, together with all that has been added to the charming science of ornithology since the publication of his great work. The study of zoology, in all its departments, is reviving in this country; and we know of no publication that is more calculated to spirit it on to farther exertions than this fasciculus, and the others of which it forms a part. The additional information is rendered valuable by the authorities being given; the supplements to the different orders embody all that is known of the habits of the genera and species; and the engravings, which are admirable both in their spirit and truth, are taken from real specimens, and executed with much richness and freedom. They are also

selected with great judgment. To have chosen those that are known to all, would have been of comparatively little value, as all that the student who found the living specimens in their native haunts would have done, could have been to criticise and compare; but by giving those chiefly which are rare and foreign, and comparing the figures with the descriptions, the student will be enabled, from the descriptions alone, to distinguish the native species whenever he meets with them. This is the most successful way of instruction, because whilst it gives the lesson, it hides the school-master. If we were to offer a short opinion of it, it would be that the book and the subject were equally delightful. Take the description of the manners of that most interesting bird, the wood grouse, which, though now unfortunately lost to the ornithology of this country, still abounds in the extreme north of the continent and of Asia: it is part of the appendix to the order Gallinæ, and a fair, but not flattering, specimen of the work.

"The season of reproduction commences with the wood grouse in the month of March or April, sooner or later according to the duration of the snow which covers its native mountains; this period usually lasts until the buds of the beech-tree begin to blossom. The old male is fond of retiring to the spot which has been the scene of his early amours; he generally makes choice of the declivity of some mountain, exposed to the first rays of the sun, in the neighbourhood of a torrent where pine-trees grow: there the male, with a cry peculiar to the species, calls the females, who assemble on the ground round the tree on which he perches. This fine bird, with his eyes sparkling, the feathers of his head and neck erect, his wings extended, and his tail raised and spread out, parades proudly over the thickest branches; and often on the trunk of some tree which has fallen; in this attitude he makes the solitudes re-echo with his voice, which bears no indistinct resemblance to the whetting of a sith: he most generally commences these cries as early as two o'clock in the morning, and continues them until day-break; he then descends from the tree, round which the females, to the number of six, and often of eight, are assembled. In the morning he accompanies them in search of food, and in the evening he resumes his former position. This habit of the grouse is known to hunters, and would lead to the belief that it was easy to discover and destroy him. This, however, is not at all the case, for he will seldom allow himself to be approached near enough for that purpose. It is only when he is uttering those cries we have mentioned, that it is possible to get near enough to him; as soon as he is silent, the fowler should remain immovable; the least stir, even the crackling of the leaves, or an inconsiderate movement of the eyes, will immediately drive away the grouse; and when once he has discovered the danger, he is no longer to be approached, not even within two hundred paces. In observing the cautions we have given, however, the fowler can easily kill this bird, when he gets under the tree; even if he miss him, he will have time to reload his piece, as long as the grouse continues his deafening cries."

Histoire de l'Université de Paris.

Par E. Dubarle.

HAVING in a former No. (641) inserted an account of this interesting publication, we have been sorry to postpone so long as we have done the sequel of that paper, with some

further particulars of considerable literary curiosity.

The University of Paris was at all times a zealous defender as well as successful advocate of the independence of the French clergy: at one moment engaged in resisting, with powerful effect, the ambitious pretensions and exactions of the see of Rome; and, at another, as Gollut testifies, "upholding principles of honour, a due reverence for pure religion, and a love for the public welfare." It was this spirit which induced it to support the "pragmatic sanction," by which the virtual liberties of the Gallican church were secured in 1439; and prompted it to read a bold, but unhappily useless, lesson to the new occupant of St. Peter's chair in 1394. Indeed, its address to Benedict XIII. abounds with so many "wise saws" for subjects as well as sovereigns, that it would be unpardonable in us to pass it wholly *sub silentio*. We must premise our extract by reminding the reader, that the tiara was at this time claimed by two rival candidates. Clement VII. having died at Avignon, "the whole of Europe, and the University among the first, set themselves in motion with a view to convert this event into a means of promoting unity in the church. But their exertions were unavailing; the same motives which occasioned the nomination of a successor to Urban VI. swayed the appointment of a successor to Clement, in the person of Peter de Luna, an Arragonese, who had been for many years the papal legate at the court of France: he was a man of learning, and a skilful diplomatist; possessed of a shrewd understanding, and as subtle as he was pertinacious. On assuming the semi-pontificate, he adopted the title of Benedict XIII., and the University wrote him a remarkable letter, congratulating him on his accession, and in the same breath exhorting him to exert himself in restoring peace to the church. 'If you defer until the morrow,' said the University, 'what you can do to-day, a second and then a third day will glide away unnoticed; and these successive procrastinations will bring about neglect and oblivion of the intended task. And this will be seconded by flatterers, who, under pretence of affection, infuse the poison of self-esteem and indifference for the public welfare; and by the ambitious, who will besiege you for dignities and preferments; then will step in the courtier, who is an inexorable worshipper of the powers that be; and to all these allurements will be added the pleasing habit of commanding, than which there is no allurements more attractive and insinuating, or more conducive to estrangement from the paths of duty. We are not apprehensive of wounding your ears by making use of this language, because we know them to be of a very patient character; you are a lover of truth, and this emboldens us to speak to you without disguise. Human nature, as you well know, is weak, enraptured with its own perfections, and more given to indolence, deceitful pleasures, and tranquillity, than to labour and its consequent fatigues; apply your hand promptly to the work, (this we entreat of you in our humble supplications,) casting to the winds all delays and tergiversations. If you are able to do good to-day, why defer it till to-morrow?—If you are incapable to-day, you will be much more so to-morrow; for experience teaches us that delays and intermissions do not contribute to activity, but, on the contrary, diminish and cool it. Besides, the evil requires a prompt remedy, and will not brook delay, seeing that, as it is of long existence, its character will become desperate, unless a diligent hand come

forward with a cure.' This address, however, produced no effect; Benedict had a rival in Boniface IX., who was as pertinacious as himself; and the self-love of both impelled them to prefer the preservation of their personal dignity to the interests of religion."

We now approach a period of high interest to the English reader,—the eighteen years (1418—1436) during which the destinies of France were wielded by the victor of Agincourt, and subsequently by the infirm hand of the regent Bedford. "The scanty protection which the University received at the hands of the new government, occasioned it bitterly to deplore the times when the native princes treated it with benignity, maintained its dignity, and took a delight in heaping benefactions upon it." Not only was much of its splendour abated under the English sway, but, in 1431, the Duke of Bedford, with the Pope's sanction, founded a rival University at Caen, under letters patent from Henry VI. It appears, however, that "on the occasion of that prince's entry into Paris, he confirmed its privileges. The English monarch came after the ceremony to dine at the marble table in the great hall of the palace. Tables had been reserved for the University; but such was the want of proper order, that its members found the greatest difficulty in pushing themselves through the crowd and reaching their seats, after being huddled pell-mell with soap-makers and the dregs of the people." At this period, however, the affairs of the French king, Charles VII., who had retreated behind the Loire, took a most unexpectedly favourable turn, "thanks to the enthusiasm excited by the heroine of Orleans. Joan of Arc had appeared upon the stage, and her presence had rekindled the courage and hopes even of the most desponding. The unenlightened mind of those days being apprehensive of the manœuvres of the devil, and tracing every event of a supernatural appearance to his instrumentality, her services were not accepted until she had undergone examination before the doctors of the University of Poitiers, which had been recently established. "Well I know," said she, when riding towards that place, "that there is plenty of work cut out for me at Poitiers, to which you are conducting me; but the Lord will help me. So proceed we thither, and the grace of God be with us!" The tide of success speedily buried former reverses in oblivion; the English fled in all quarters; Orleans was delivered, Jurgan was taken, and victory crowned the triumphs of France at the battle of Patay; whilst the maddened fury of the enemy induced them to treat that very heroine, upon whose prowess they turned their backs and fled, as a sorceress."—"The Duke of Bedford was compelled, upon the direct requisition of the University, to lay down his office of regent, which was conferred upon the Duke of Burgundy. There was nothing to palliate these reverses but the capture of the Maid. She had been taken prisoner in the battle of Compiègne, by a natural son of Vendôme, who had sold her to the Sire de Luxembourg, from whom the English, in their turn, bought her for ten thousand livres. Peter Cauchon, bishop of Beauvais, who had been driven out by his diocessans after they had opened the gates of the town to the king's party, united with the inquisitor of the faith in claiming her person, as amenable before the ecclesiastical courts in the double character of a heretic and a sorceress. The University of Paris also, or at least such of its members as had continued to reside there as adherents of the English party, joined in enforcing this claim. 'We are greatly in fear,' said this learned body,

'lest the seductions and malice of hellish enemies, and the subtleties of your adversaries and evil-minded persons, who are anxiously striving to deliver her, should rescue her out of your hands by some contrivance which God would not approve; of a truth, every loyal catholic must opine, that never in the memory of man could there occur a more signal breach of religious faith, or fouler damage to the national interests, than if she were to escape by such damnable means and without suitable punishment.' A decree of King Henry, granted upon demand made by the bishop and University, and couched in letters patent of the 30th of January, 1430, ordered that Joan of Arc should be delivered into his hands. She was instantly put upon her trial, during the course of which the University was frequently consulted; 'and when the judges found themselves thwarted by the answers of the aforesaid maid, they wrote to request its opinions, which, on this account, abound throughout the trial.' Doctors had been appointed as assessors to assist the inquisitor, brother Martin, and the bishop, her two judges; and the majority of them, notwithstanding the care with which they had been selected, acted rather from fear than conviction; for such as were indulgent towards her in their interrogatories, and gave her encouragement to reply, were insulted, and had threats of being thrown into the river held out to them. All the reports of proceedings were falsified, and those which were forwarded to the University for its advice contained a tissue of lies and misrepresentations. It will be readily imagined that this advice was by no means in her favour; for it was given under the influence of Joan's persecutor, Peter Cauchon, at that time apostolic conservator of the University, whose name had acquired no very laudable notoriety from his associating himself with Petit in lauding the assassination of the Duke of Orleans. Being pronounced guilty of blasphemy against God, because she had worn male attire! and chargeable with heresy towards the church, she was burned at Rouen on the 30th of May, 1431. And 'the University of Paris, determined to play its part in the tragedy, set out in grand procession to Saint Martin-des-Champs, on the day of Saint Martin d'Esté, when a Dominican pronounced a declamatory oration against this poor girl; in which he set forth, that all she had done had been the work of the devil, and not of God.'—This atrocious deed greatly contributed to weaken the power of the English, by rendering them odious to the nation."

The misfortunes of Henry VI., and the success as well as enlightened policy of his rival, whose forces recaptured Paris about four years afterwards, gave prosperity to France, and amply atoned to this University for the injuries it had sustained under foreign misrule. But the most auspicious event, which had ever promoted its prosperity, was the capture of Constantinople by the Mahomedans in 1453. "A host of learned men, who had escaped that catastrophe, and fled from Turkish oppression, had emigrated to Europe in search of new homes; and offered their talents, acquisitions, and books, in exchange for the hospitable welcome they received. A new era dawned upon the West; a new direction was given to the arts and sciences; and they received an impetus, which might be crippled, but could never be arrested. The University of Paris was not a stranger to this impulse, but, on the contrary, hailed it with eagerness: this period, indeed, is considered by its historian (Crevier) as having rekindled the pur-

suits of literature within its bosom. The study of the ancient languages, which is necessary to the effectual development of the human mind, and had always been encouraged by the Parisian schools, was, notwithstanding, in a very languishing state. Rhetoric, the use of which is to confine the art of writing within limits defined and recognised by good taste, was not only scarcely known even by name, but had been crushed beneath the incubus of scholastic philosophy. The year 1458 was the witness of important ameliorations in the science of teaching. The name of one of these illustrious fugitives deserves to be rescued from oblivion. Gregory of Tifernum, the pupil of the famous Chrysolorus, and the master of Poggius and Aretinus, offered his services to the University, by which they were cordially accepted, with the assignment of an allowance of one hundred crowns per annum; and he consequently opened two public courses of lectures in Greek and rhetoric."

We must now bid farewell to M. Dubarle's attractive pages, in the earnest hope that he may speedily indulge us with a fresh proof of that talent, accuracy, and laborious research, which characterise the first volume of his History. No individual can rise from the perusal of such a work as his without entertaining a deeper sentiment of veneration and gratitude towards those, upon whose unostentatious but inestimable labours the proper moulding and expansion of the intellect of civilised nations so essentially depends.

Serunt arborea, quæ alteri sæculo prosunt.

SIGHTS OF BOOKS.

A General, Medical, and Statistical History of the present Condition of Public Charity in France. By David Johnston, M.D. 8vo. pp. 605. Edinburgh, Oliver and Boyd: London, Simpkin and Marshall.

IN times of national improvement, when so many plans to ameliorate the condition of mankind are almost daily broached, it is of much importance to know what has been done and is doing, in other countries, where also projects of utility and advanced civilisation are entertained. We have to thank Dr. Johnston for furnishing us with ample materials of this kind, and enabling us to take very striking, comparative, and comprehensive views of subjects of infinite consequence to humanity. The management of hospitals, the question of dissections, asylums for various classes of the afflicted, lunatic establishments, mendicity, and other objects of the utmost interest, are here fully and fairly brought before us; and not only public men, but every order of intelligent readers, will find much food for reflection in these pages of laborious detail and sensible investigation. Saying this of the general merits of the work, we shall only refer to one of its particular features—the account of the *Maisons de Santé* (chapter viii.)—for the purpose of introducing a paper we have this week received from a correspondent, and for which we cheerfully make room below, as it is ever gratifying to us to promote the cause of any valuable and deserving institution.

"In France there are houses under the name of *Maisons de Santé*, into which persons of limited income are admitted when they fall into ill health, and where, for a very moderate sum, they are accommodated with board, lodging, and medical attendance. In Paris there is one large establishment of this kind, under the immediate patronage of the government, and by whom any deficiency in the income is made up. The principle is obviously

good,—those who have seen better days, and have not forgotten the honest pride of independence, are spared the mortification of becoming the inmates of a public hospital, while they are enabled to retain their comforts at a moment when the loss of them would be most severely felt. In this country, the only institution of the kind, so far as we know, is the Asylum for the Recovery of Health, at Lisson Grove, established several years ago,—but we suspect not generally known to the public. The plan very much resembles that of the *Maisons de Santé*. Respectable persons, of either sex, are furnished with every comfort, for a sum which would go but little way towards their maintenance at home, while they are at the same time provided with medical and surgical advice,—of which it is enough to say that we observe the names of Maton, Keate, and Brodie, in the list of professional attendants. None of the rooms contain more than three beds; and any one, on paying a few shillings a week in addition, is accommodated with a separate apartment. Officers, clergymen, tradespeople, and others, in reduced circumstances, and gentlemen living on narrow means, who must otherwise have experienced great distress, have, in the hour of sickness, thankfully availed themselves of the institution; and we are anxious to make it generally known to those who may wish to participate in its benefits, as well as to those who, approving of the plan, may be disposed to assist the governors in extending its operations. It deserves all encouragement, for it holds out relief to those who would shrink from becoming the objects of more direct charity—who are willing to contribute towards their support, but who, if left unassisted in the struggle, would speedily sink from humble independence to absolute destitution;—in a word, it embraces a class of persons not provided for by any other charity in this great metropolis. It is to be kept in mind, however, that like all such establishments in this country, it depends for support upon the subscriptions of private individuals; and we are sorry to learn, that at the present moment the exertions of its friends are particularly required."

Narrative of the Siege and Capture of Bhurtpore, in the Province of Agra, &c., by the Forces under Lord Combermere, 1825-6. By J. N. Creighton, Esq. Captain 11th Light Dragoons. 4to. pp. 168. London, 1830. Parbury, Allen, and Co.

A LAMENTABLE apathy or indifference to the occurrences of our Eastern empire has been by more than one public writer (besides ourselves) laid to the charge of the people of this country,—and with some degree of truth it would seem, or four years would not have elapsed without a suitable record of an event like that here detailed. We know not exactly how to account for this absence of a nationality of feeling towards India, whose connexion with the mother country is increasing in importance almost hourly;—but of this we are sure, that a writer possessing the patriotic spirit to undertake, at the hazard of much pecuniary sacrifice, a work illustrative of British-Indian military history, is largely entitled to commendation.

Captain Creighton's performance is what it should be—concise, yet perspicuous. Accompanied by the several requisite documents to give it due interest to the various parties—in the field and cabinet—connected with the siege, it is at the same time rendered facile of research to the historical student and general reader, who till the appearance of this volume

had no other source of information on the subject than that furnished by newspaper statements. An epitomised relation of the siege of the same fortress in 1805 is appended, judiciously we think, as well for its historical connexion, as that it forms an excellent auxiliary to Captain Creighton's tribute to the memory of the late gallant Lord Lake.

We shall be glad to see the English public evince a disposition to redeem the error or prejudice imputed to it, by giving countenance to this and other publications of the same tendency.

The Exclusives: a Novel. 3 vols. 12mo. London, 1829. Colburn and Bentley.

As a mere novel, these volumes have very much the same sort of merit as those belonging to that good old school of distresses and dilemmas which were the delight of our grandmothers. There is a very faultless hero, and a still more perfect heroine,—one of those super-excellent young ladies who are all simplicity and white muslin, and religiously indifferent to the colour of their court dress. These lovers are made miserable, after the ancient fashion, by misunderstandings which a word would have cleared; and, equally after the ancient fashion, are made happy by misdirected letters, containing all the necessary discoveries; so that all ends by a happy marriage. So much for the more antique parts of invention and composition. As for the modern, the whole peerage has been emptied on these pages: no person therein figures without a title, or two old family names; and there is what may be called a deal of genteel reading. Of the general spirit we shall only say, we thought, and do think, the public surfeited with such trash; and of the more peculiar tone, that we can conceive nothing more outrageous, both in point of taste and feeling, than taking certain individuals, too openly designated to be mistaken, and making these real characters act the part of fictitious ones, incurring all the odium of whatever it may please the author to make them perform. As a mere picture of society, it is exaggerated and revolting. Much has been said, in the way of preliminary puff, of this novel being the first production of a lady of distinction. We will venture to assert pretty decidedly, from internal evidence, that the *Exclusives* is written both by a masculine and practised (we were going to have said hackneyed) writer, and one also very evidently ignorant of the circles he professes to depict.

ARTS AND SCIENCES.

LINNÆAN SOCIETY.

DEC. 1.—A. B. Lambert, Esq. V.P. in the chair. The paper read this evening was an account of a recent botanical excursion from Jalapa to Papantla, by Dr. Scheide and M. Ferdinand Deppe, two German naturalists. The communication embraced a great many curious details. The travellers, in the course of their excursion, discovered three entirely new species of the genus *pinus*, or fir tree; also a new species of *sarsaparilla*, possessing similar properties with the *similar sarsaparilla* of South America. Besides these, a new species of oak was found in the hot regions of Mexico—the only instance on record, perhaps, of the genus *quercus* growing in such a temperature: they saw also an abundance of the scarce parasitical plant *vanilla* on the bark of decayed trees. On the banks of the river Tecoluta the travellers observed great numbers of the white *ibis*, and a variety of the heron tribe.—Joseph Neeld,

Esq. and E. Jennings, Esq. were balloted for and elected.

ECLECTIC SOCIETY.*

G. FRANCIS, Esq., sub-treasurer, in the chair.—Mr. C. Cohen (chemical operator to the Society) read an interesting paper, containing a statement of experiments on the blood of various animals, tending to confirm the theory of M. Baruel of Paris, viz. that there exists a peculiar fluid in each animal, distinctive of the source or particular animal from which it is obtained: concentrated sulphuric acid being added to the blood of animals in a glass tube, it will, when agitated, give out the peculiar odour of the animal from which the blood was taken. Mr. Jenkins (the hon. secretary) presented to the Society the perfect fruit of the acacia, preserved in spirit; also to the library, Buxtorf's Chaldaic and Syriac Lexicon.

EASTERN EXPEDITION.

DOCTOR GERARD, the brother of M. G., who has traversed the Himalaya mountains, has just visited the valley of Sulej, and made some curious observations at that place, which is the highest inhabited spot on the globe. The principal object of his journey was the introduction of vaccination into Thibet; but it appears that the prejudices of the Rajah prevented him from succeeding in that humane enterprise. One of the villages where he stopped was proved to be 14,700 feet above the level of the sea. At this place, in the month of October, the thermometer, in the morning, marked 8° 33' centigrades below zero; and during the day the rays of the sun were so hot as to be inconvenient, and yet the waters in the lakes and rivers were frozen during the night, but were free from ice at two o'clock in the afternoon. By means of artificial irrigation, and the action of solar heat, large quantities of rye were raised at this immense height, some of the fields being at 14,900 feet. Doctor Gerard gives his opinion, that cultivation might be carried as high as from 16 to 17,000 feet. The goats bred in this region are the finest in the country, and are of that species whose wool is used for the manufacture of shawls.

At a height of 15,500 feet, quantities of fossil shells are found on calcareous rocks, upon strata of granite and pulverised schist: they consist of muscle, and others of various forms and dimensions. To the north of the frontier of Konnaour, Doctor Gerard attained a height of more than 20,000 feet, without crossing the perpetual snow. At one o'clock in the afternoon the thermometer was at 2° 78 centigrades below zero. Notwithstanding this extreme elevation, the action of the sun had an unpleasant effect, though in the shade the air was freezing. The aspect of the surrounding regions was sublime and terrible; and on the frontier a ridge of snow was perceptible. In these regions, which for a long time were inaccessible, M. Gerard met with one of the most intrepid philologists known in Hungary, named Cosma de Koros. This traveller, after advancing towards the centre of Asia, arrived at Konnaour, in Thibet, where he fixed himself in the monastery of Kanum, and lived amidst the monks of the Lamaic religion. Aided by a learned Lama, he made great progress in the study of the literature of Thibet, and discovered an encyclopædia in forty-four volumes, which treated of the arts and sciences. The medical part of this large work

forms five volumes. The art of lithography has been practised at the principal city of Thibet from time immemorial, and it has been used to display the anatomy of the different parts of the human body. It appears that science and letters, flying from the tyranny of the caste of the Brahmins, abandoned the plains of Hindostan, and took refuge on the mountains of Thibet, where, until the present time, they remained totally unknown to the rest of the world.—*Le Globe*.

LITERARY AND LEARNED.

OXFORD, Nov. 28.—On Thursday the following degrees were conferred:—

Doctor in Civil Law.—Rev. W. M. Lally, St. John's College, Grand Compounder.

Masters of Arts.—Rev. J. S. R. Evans, Queen's College, Grand Compounder; H. Reynolds, Scholar of Jesus College; Rev. J. T. C. Fawcett, Student of Christ Church.

Bachelors of Arts.—J. N. Edwards, Worcester College, Grand Compounder; T. Furnivall, Queen's College; W. Dod, W. Duke, Magdalen Hall; W. Gould, Balliol College; G. D. Haughton, Worcester College; G. Eaton, T. Brooke, Brasenose College; G. Clayton, Christ Church College; J. W. Chambers, St. John's College; G. C. Hawkins, Oriel College; R. H. Flower, J. F. R. Hill, Trinity College; R. Foster, Exeter College.

ROYAL SOCIETY.

IN No. 658 of the *Literary Gazette*, (August 29th) we described, with much approbation, the plan which was then adopted for making an exchange between the Royal Society and the British Museum,—the former giving to the latter such scientific and other productions as it had not opportunity of employing to the advantage of the community at large, or to its own, and receiving in return the duplicates of such works, from the Museum, as were best calculated to enrich and complete its library of reference. Nothing, it appeared to us, could be more eligible than such a transaction; and as neither the Council of the Royal Society, nor the Trustees of the British Museum, could by possibility have any personal interest in the matter, we certainly hailed it as a well-meant and well-devised scheme for the public benefit. It seems, however, that some dissentients have taken a different view of the case, and some very angry letters have appeared in the *Times* on the subject; calling the exchange a job, and those concerned in it very hard names. We have heard that Mr. Babbage objected to it strongly in the Council; but who wrote the *Times'* letters we know not: if that gentleman, we think he would have given them the weight of his name. But whoever the writer is, he is evidently, from the remedies he suggests, ignorant of the fact, that the President and Council of the Royal Society enjoy, by the charter, the full and perfect right to do that which he has questioned, and, further, recommended to control by general meetings, and other expedients altogether inconsistent with the constitution of the body. The Arundel Manuscripts, which have been transferred to the British Museum, were presented to the Royal Society soon after its formation, and have ever since, from the nature of its proceedings, been a dead letter: they may now be of general utility to literary men. But it has been argued that the Museum was not ready to return the *quid pro quo*; and we believe that in the first instance there was a semblance on which to found this suspicion. For the British Museum being in progress with its Catalogue could only produce its early sheets (as far as they had gone), out of which the Society were to select such books as suited their purpose; and there were probably not half enough to satisfy a fair balance of exchange. But on looking to our original statement, we find that this contingency was pro-

vided for. The valuation was to be made, and "it was agreed to make a debit of the amount as against the Museum, to be diminished and extinguished, as occasion offered, by the transfer of such things as were eligible to be received" (see *Lit. Gaz.* p. 570). Considering these circumstances, we cannot imagine that the outcry of corruption, jobbing, and imbecility, which has been raised, is warranted; but, on the contrary, still continue to look upon the transaction as one purely and judiciously directed to the public good.

SOCIETY OF ANTIQUARIES.

ON Thursday, last week, H. Hallam, Esq., V.P., in the chair.—Reginald Bray, Esq., the Rev. T. S. Hughes, and Ralph Watson, Esq., were elected fellows. Signor Juan Barthé communicated, through Lord Aberdeen, facsimiles of some Roman inscriptions. The Rev. H. J. Todd, F.S.A., presented a drawing, with a description, of a richly-ornamented Saxon doorway at Kirkham Abbey, Yorkshire. Some remarks on the coins of the kings of Mercia, by Edward Hawkins, Esq., F.S.A., were read; and also a communication from Mr. Bray respecting the discovery made on Earl Onslow's estate at Worplesden, in Surrey, two miles and a half from Guildford, on the 30th July last, of a pavement sixty-two feet in length, the tesserae of which his lordship has had removed to Clandon, for an ornamental building.

Dec. 3d. Thomas Amoyt, Esq., in the chair.—Three or four short communications were read on subjects of no particular interest.

ROYAL SOCIETY OF LITERATURE.

THE paper read at the last meeting was a translation of Aneurin's poem of "Gorchan Cynvelyn," made some years ago by the author of the "Celtic Researches." The translation is in sufficiently spirited verse. But the most valuable part of the venerable writer's communication is the introductory memoir, in which, after pointing out the futility of endeavouring to interpret the remains of the primitive bards of Britain by the help of the continuators of Nennius, the Triades, and Geoffry of Monmouth's history—works which are either palpable forgeries, or, at least, of doubtful or of no authority,—he recommends the study of the authentic poems of Aneurin, Taliesin, and Llywarch, conducted upon sound critical principles, as the only means of enabling the historian and the antiquary to obtain an accurate knowledge of the customs and manners of our British ancestors, as well as of ascertaining, by an easy deduction, from an acquaintance with the language which the Romans left among them, what language they originally found.

A copy of the "Anwari Sohili," printed at the government press at Bombay, and several volumes of Transactions of the Della Cruscan Academy, were among the books presented.

FINE ARTS.

NEW PUBLICATIONS.

Devonshire and Cornwall Illustrated. From original Drawings by T. Allom and W. H. Bartlett, &c.; engraved on steel by Heath, Miller, Le Petit, Wallis, &c. With Historical and Descriptive Accounts, by J. Britton and E. W. Brayley, Esqrs. Part I. Fisher, Son, and Co.

WHEN we consider the variety of minds, from the humblest and simplest to the most exalted and refined, to which topographical publications address themselves, we cease to wonder at their multiplicity. The first Part of the

* A Society under this name has been formed in the eastern part of London, and has monthly meetings: as we wish to promote every literary and scientific institution, we publicly notice its transactions.—*Ed. L. G.*

very pleasing one before us is confined to Devonshire, of which it is truly observed, "there is not, perhaps, a single county in the British Islands more replete with picturesque and romantic features, antiquarian remains, geological riches, and geographical and maritime relations." The views are sixteen in number, and are beautifully executed. We recommend, however, for the benefit of those who are strangers to the scenes which they represent, a little more particularity, in future, in their titles. For instance, it is necessary for any one unacquainted with the places, to refer to the printed text to ascertain whether "The Royal Hotel and St. Andrew's Chapel and Terrace," and "The Royal Theatre and Athenæum," are in Exeter, or in Plymouth. With respect to the historical and descriptive portion of the work, the names of the gentlemen by whom it has been undertaken are a sufficient guarantee of its correctness and excellence.

Engraved Illustrations of Ancient Arms and Armour. After the Drawings and with the Descriptions of Dr. Meyrick; by Joseph Skelton, F.S.A. Part XXI.

"HORSE Muzzles, &c.," "An Iron Arm of the Sixteenth Century," "Sword-Hilts, Chape, &c. A.D. 1660," "Instruments of Punishment," "Persian Armour," and "A Florentine Morian, A.D. 1590," are the plates which embellish the twenty-first part of Mr. Skelton's work. They are executed in the same distinct, and, when requisite, elaborate style, as those which have accompanied the preceding parts. The "Iron Arm" is especially curious. In his description of it Dr. Meyrick says:

"The armourers, as the most skilful workmen of former times, were employed in operations similar to those of surgical instrument makers; among which were contrivances for supplying the loss of limbs. A few of these are still preserved in ancient mansions. The family of Clephane, at Carslogie near Cupar in Scotland, have an iron hand without a thumb, the fingers of which move at the knuckles. It is attached to three flat bars, which, by means of a hoop, were fastened on the arm, just below the elbow. Tradition says it belonged to a laird of the place, who received it from a king of Scotland, in consequence of having lost his hand in the service of his country. An engraving of it will be found in the *Border Antiquities of Scotland*. The iron arm of the famous Götz, or Gottfried, of Berlichingen, born in 1481, and who died in 1562, preserved at Ixhausen, where he resided, is renowned throughout Germany. A description, with explanatory plates, was published at Berlin in 1815, from which it appears not to have reached higher up the arm than that of Carslogie. It was manufactured at Heilbron, on the Neckar. Götz was a warrior of great prowess, and took a prominent part in all the conflicts of his time, particularly in the war of the peasants of Franconia and Swabia against the bishop and nobles; and his life, written by himself, presents a curious picture of the age. Göthe has ably dramatised the principal events.—The specimen in the collection at Goodrich Court, though not so complicated, as the fingers and thumb have only joints at the knuckles, so strongly resembles this in the details of contrivance, that we need not hesitate to assign it to the same manufactory. It was intended to supply the place of the right arm, and to be attached to the pouldron of a suit of armour, on which account it was sufficient that the hand grasped a weapon, that the arm would

turn round below the pouldron, and that it would bend at the elbow."

The London Lithographic Album for 1836.

Engelmann, Graf, Colindet, and Co.

THE facilities afforded by lithography have enabled Messrs. Engelmann and Co. to present the public, at a very moderate price, with this pleasing Annual, which comprehends a singular variety of subjects, fifteen in number, executed all of them in an agreeable, and some of them in a masterly manner. We must briefly notice a few of the most striking—"Cottage Comfort;" painted by Gainsborough, drawn on stone by R. J. Lane, A.R.A. The fine effect of artificial light, and, which is better, the truth of natural character, have both been preserved by Mr. Lane with his accustomed talent and feeling.—"Rivaux Abbey;" drawn on stone by P. Mackenzie. A sweet and delicately finished delineation of this elegant and romantic ruin.—"The Departure of the Packet;" on stone by Paul Gauci, from a drawing by S. Owen. The well-known ability of Mr. Owen in marine subjects, renders it only necessary to say, that the present is one of his most pleasing representations of calm: the flatness and lucidity of the water are charming.—"The Silent Lute;" painted by T. Warrington, drawn on stone by J. S. Templeton. We mentioned Mr. Warrington's clever picture in our notice of the last exhibition at Somerset House: great justice has been done to it by Mr. Templeton.—"La Corotaire;" painted by J. J. Chalon, drawn on stone by W. Gauci. Besides his excellence as a painter of local buildings and scenery, we do not know any of our artists whose foreign figures are so entertainingly characteristic as those of Mr. Chalon.—"Le Bonnet de Crêpe;" painted and drawn on stone by L. Mansion. A very pretty and piquant portrait.—"Tired of Play;" drawn on stone by G. Childs, from a picture by H. Corbould. The chiaroscuro in this pleasing little composition is very skilfully managed. Mr. Childs is an accomplished lithographer.—"Preparing for May-Day;" drawn by T. Fairland, from a painting by R. Farrier. Happy girl! Life would be too valuable, if the feelings of that age were to continue.—"Saturday Night;" painted by W. Hunt, on stone by M. Gauci. The sparkling and spirited drawing, of which this is a faithful copy, must be fresh in the recollection of all the visitors of the last Exhibition of the Society of Painters in Water-colours. But we must desist from particular criticism; and content ourselves with repeating our general praise of this interesting publication.

Great Britain Illustrated, from drawings by W. Westall, A.R.A., engraved by E. Finden; with descriptions by T. Moule. Nos. 17 and 18. Tilt.

Two pretty Nos. of Mr. Tilt's cheap and clever publication. The views of "Roelin Castle," and "Berry Pomeroy Castle," are singularly picturesque.

Characteristic Sketches of Animals. Drawn from the Life and engraved by Thomas Landseer. Dedicated, by permission, to the Zoological Society. Part I. Moon, Boys, and Graves.

THE establishment of the Zoological Society, and the formation of their menagerie and gardens in the Regent's Park, have given a strong impulse in this country to the study of zoology—an impulse which the present clever publica-

tion is well calculated to increase. We have too frequently had occasion to notice the talents of Mr. Landseer in the characteristic delineation of animals, to render it necessary for us now to say more than that, in some of the plates under our immediate notice, he appears to have exerted those talents with even more than his usual success. As a proof of this, we would cite either the involution of the agonised and helpless tiger in the folds of his terrible enemy the boa constrictor, or the concentration of animal viciousness and cunning manifested in the eye of the bonassus. The plates of the giraffe, which are after drawings taken from the noble specimen in the Jardin du Roi at Paris, are said, and we have no doubt justly, "to offer for the first time a correct and unexaggerated representation of the original subject." One of the vignettes exhibits the whimsical adventure of Mr. Landseer with an elephant in the Jardin du Roi, which we communicated to our readers soon after its occurrence. The descriptions, which we understand are from the pen of John Henry Barrow, Esq. are written with great perspicuity, and contain much pleasing and valuable information.

Fox-hounds running in Cover. Painted by R. B. Davis, Animal Painter to his Majesty; engraved by W. Giller. Moon, Boys, and Graves.

WE noticed, with the praise which it deserved, the original picture, when it was in the Exhibition of the Society of British Artists: the print, which is very sweetly engraved in mezzotinto, appears to us, as well as we can recollect, to be a faithful imitation of it.

Lincoln Cathedral. Engraved by W. Say, from an original drawing in his possession. Lincoln, Brooke and Sons; London, Ackermann.

LET the skill of the engraver be what it may (and Mr. Say's great talents are well known), there is a heaviness in mezzotinto which unfits it for subjects such as the present.

ORIGINAL POETRY.

PARTING OF HECTOR AND ANDROMACHE.†

THUS Hector said, nor longer there remain'd,
But with swift foot his stately palace gain'd;
Yet, haply, found not there, more loved than life,

Her whom alone he sought—his beauteous wife.
She, with her babe and nurse, that mournful hour

Watch'd, steep'd in tears, on Ilion's topmost
Then, at the threshold, hastening to depart,
"Where," Hector cried, "the wife of Hector's heart?

Sought she some sister's anguish to restrain,
Or led the matrons to Minerva's fane?"
"None dares," the guardian of his house replied,—

"None dares, thus charged, the truth from Hector hide.

Not now a sister's anguish to restrain,
Not with the matrons at Minerva's fane;
But when 'twas widely bruited Troy had fled,
And Græcia to these walls the battle led,

* It will be remembered, that the *Lit. Gaz.* contained a portrait of the giraffe sent to England, from an accurate drawing by Mr. Davis.

† We some time ago noticed the reading, at the request of the Council of the Royal Society of Literature, of a portion of Mr. Sotheby's new translation of the *Iliad*; and we have now the gratification to submit another portion for the perusal of our readers—the distinguished author of *Osoron* having most kindly and condescendingly assented to our request to be favoured with this specimen.—Ed. L. G.

Thy wife, where Ilion's tower o'erlooks the
light,
With her loved child and nurse, flew wild
with fright."

Swift at the word, impatient of delay,
Through Troy's proud streets the chief re-
traced his way:

And now arrived, where to the battle-plain
The Scæan gate recalled his step again,
His rich-down'd consort—from Aëtion sprung,
Who erst held sway Cilicia's sons among,
And from far Thebes and Hypoplacia's grove
Led the fair virgin to her Hector's love—
Before him rush'd, and with deep woe o'erpress'd,
Came with her infant on the nurse's breast—
Their only child, and lover in their sight,
And fairer far, than Hesper's golden light.
From famed Scamander, Hector named his boy,
But proudly called Aatyanax by Troy,
In honour of his sire, whose single power
So oft had turned the host from Ilion's tower.
But now the father, bending o'er his child,
Eyed him in silent joy, and sweetly smiled;
The while Andromache, dissolved in tears,
Hung on his hand, and poured forth all her
fears.

"Too rashly bold, thee, sole defence of Troy,
Thy brave right arm, and fearlessness destroy:
Fails then thy child a father's heart to move?
Fails then thy wife's unutterable love?
Thy wife!—no more—Greece arms 'gainst thee
her force: [corse.

Thy wife! a widow, on thy blood-stained
Ah! 'reft of thee, be mine the wish'd-for doom
To hide my anguish in th' untimely tomb!
Ah! 'reft of thee, no hope, no solace mine,
But grief, slow wearing out life's long decline.
No mother waits me, no consoling sire,—
The hapless victim of Achilles' ire.

Ere from the sack of Thebes the chief withdrew,
His ruthless rage my sire Aëtion slew;
Yet feared to spoil, but honouring, on the pyre,
Him, with his arms, consign'd to feed the fire;
Then heap'd on high the earth, whose funeral
mound [crown'd.

With planted elms the Jove-born oreads
They too, whose smiles our hearth had blissful
made,

Seven brothers, sunk at once in Hades' shade.
These, mid their cattle, on the pasturing mead,
Achilles saw at once beneath him bleed.

And here, the conqueror, mid his plunder'd
store,

From Hypoplacia's groves my mother bore,
Then, richly ransom'd, back restored again,
Too soon to perish—by Diana slain.

Yet, thou, my Hector! thou art all, alone,
Sire, mother, brethren, husband, all in one.
In pity, guard this tower, here shield thy life;
Leave not an orphan child, a widow'd wife:
There, by the fig-tree, plant the war-array,
Where easiest of ascent to Troy the way.
Thrice have the boldest chiefs that spot as-
sail'd,

And thrice the efforts of the boldest fail'd;
Th' Atreides, either Ajax, Tydeus' son, [on,
And Crete's fierce king, there led their warriors
Whether by force forewarn'd, or martial art,
There mark'd out Ilion's vulnerable part."

Hector replied: "These all, O wife beloved,
All that moves thee, my heart have deeply
moved;

Yet more the sting of public scorn I dread,
If Hector, slave of fear, the battle fled.
Not thus my heart inclines; far, rather far,
First of Troy's sons to lead the van of war,
Firm-fix'd, not Priam's dignity alone
And glory to uphold, but guard my own.
I know the day draws on when Troy shall fall,
When Priam and his nation perish all:

Yet less, forebodings of the fate of Troy,
Her king, and Hecuba, my peace destroy—
Less, that my brethren, all th' heroic band,
Must with their blood imbrue their native land,
Than thoughts of thee in tears to Greece a prey,
Dragg'd by the grasp of war in chains away—
Of thee in tears, beneath an Argive roof,
Labouring reluctant the allotted woof,
Or doom'd to draw from Hyperæa's cave,
Or from Meæsis' fount, the measur'd wave:
A voice will then be heard, that thou must
hear,—

'See'st thou yon captive pouring tear on tear,
Lo! Hector's wife, the hero bravest far,
When Troy and Greece round Ilion clashed in
war.'

Then thou with keener anguish wilt deplore
Him whose cold arm can free his wife no more.
But, first, O Earth! o'er me thy mound unpear,
Ere I behold thee slaved, or see thy tear."

He spoke, and stretched his arms, and on-
ward prest

To clasp his child and fold him on his breast,
The while the child—on whose o'er-dazzled sight
The helm's bright splendour flashed too fierce
a light,

And the thick horse-hair, as it wavy hung
From the high casque, its sweeping shadow
flung— [trest,

Scared at his aspect, shrieked, sank back dis-
And hush'd his clamours on his nurse's breast.
The child's vain fear their bitter woe beguil'd,
As o'er the boy each parent sweetly smiled;
And Hector now the glittering helm unbraced,
And gently on the ground its terror placed,
Then kist, and dandling with his infant play'd,
And to the gods and Jove devoutly pray'd.

"Jove! and ye gods, vouchsafe that Hec-
tor's boy,

Another Hector, all surpass in Troy,
Like me in strength pre-eminently tow'r,
And guard the nation with his father's power;
Heard be a voice where'er the warrior bends,
'Behold the chieftain who his sire transcends.'
And grant that, home-returning charged with
spoil,

His mother's smile repay the hero's toil."
He spake, and gave, now sooth'd from vain
alarms,

The lovely infant to his mother's arms;
And the fond mother, as she laid to rest
The lovely infant on her fragrant breast,
Smil'd in her tears, while Hector, as they fell,
Kist her pale cheek, and sooth'd with fond
farewell. [hour

"Grieve not, my love, untimely; ere the
By fate predestined, dread no hostile power;
But at the time ordain'd, the base, the brave,
All pass alike within th' allotted grave.
Now home retire: thy charge beneath our roof,
To ply the distaff, and to weave the woof:
To task thy maids, and guide their labour,
thine—

The charge of war is man's, and chiefly mine."
He spake, then raised from earth, and firmly
prest

On his brave brow the helmet's wavy crest.
She homeward went, and slow and sadly past,
Oft turn'd, and turning wept, with woe o'ercast.
And now beneath her Hector's proud abode
Tears of deep grief from all around her flow'd,
One woe in all, while all alike deplo'd
Beneath his roof, as dead, their living lord.
Whone'er, they deem'd, escaped the battle-plain,
Would look on his loved wife and home again.

Nor Paris lingered; but in mail array'd,
Whose brilliant light the warrior's pride dis-
play'd, [fed steed,

Rush'd through the streets. As when a stall-
Swift, as he snaps the cord, from bondage freed,

Strikes with resounding hoof the earth, and flies
Where spread before him the wide champaign
lies,

Seeks the remembered haunts, on fire to lave
His glowing limbs, and dash amid the wave,
High rears his crest, and toasing in disdain
Wide o'er his shoulders spreads his stream of
mane,

And fierce in beauty, graceful in his speed,
Flies mid the steeds that wanton o'er the mead.
Not otherwise, from Troy's embattled height,
In pride of youth, in power of mailed might,
Exulting, on, impatient of delay,
Bright as the sun, young Paris sped his way,
And Hector found, where tears of anguish fell
When his loved consort heard his last farewell.

SKETCHES OF SOCIETY.

TURKISH RELICS AND SUPERSTITIONS.

THE first public transaction which signalled
Achmet's wielding of the supreme power in
the Turkish capital, was the solemn reception
of the relics which Hasan Paasha had brought
from Mecca in the year 1613. They con-
sisted of the ancient covering of the Kaaba,
the *keveb dürrer*, or star of pearls, and a
staff cut from the wood which supports the
roof of the Kaaba: this last, Hasan laid at his
master's feet, with a prayer that it might one
day prove the stay of the padishah's old age.
The star of pearls and the staff were deposited
in the innermost chamber of the harem, which
goes by the name of the "hall of the sacred
garment," as being the sanctuary where the
prophet's apparel is preserved. Besides these
relics, it contains the prophet's bow in a silver
sheath, Ebubekr's sabre and carpet, and the
battle-swords of Omar, Othman, and the other
companions of the prophet in the infant
triumph of Islamism. Next to the standard
and staff of Mahomet, these relics are con-
sidered the most precious treasures which be-
long to the imperial chattels. The prophet's
apparel has been immortalised in Turkish
song by Borda Bussiri, whose psalm has been
translated by Vivestre de Sacy, as well as by
Kaab Ben Soheir, of whose poem a German
version has been given by Lette and the cele-
brated Kosegarten. The latter opens with this
strain—

Lo! Sood's footstep echoes on my ear!

My heart with rapture beats when Sood's near:

and when he reached the lines in which he
exclaims, bursting with enthusiasm—

The prophet is a bright and shining sword,
Drawn from the armoury of Heaven's high Lord!—

the prophet, charmed with his praises, threw
him his mantle, which Kaab had already ve-
nerated as a relic, and with which, conjointly
with the water that had hallowed his bap-
tism, he healed diseases.

The holy standard of the prophet is enfolded
in forty silken covers, and his apparel is
equally wrapped in forty coverings of rich
stuff. It is the yearly custom to expose the
garment in the presence of the whole court,
and with great solemnity, on the fifteenth day
of the Ramazan, which is the middle of the
great fast; and then to hand it about for the
salutation of the bystanders' lips. The lord
high armour-bearer passes round with it, and
after every salutation wipes the sacred gar-
ment with a muslin cloth, which, from the
supposed virtue it has derived from the con-
tact, is presented to the saluter in token of his
piety. After the ceremony of kissing is over,
the part which has been defiled by sinful lips
is washed in a large silver basin, the water is
poured into small bottles by the *kialaragasi*,
and, after being closed with his seal, is sent

round to those who have attended the ceremony. The princes, sultaneses, and officers of the great dignitaries of the empire, are also honoured with phials of this holy water, in exchange for which the bearers are loaded with presents. Some drops of it are poured into the first glass of water which is drank at the termination of the fast; and its virtues are deemed an infallible preservative against diseases, as well as conflagrations. The door of the chamber of the "sacred garment" is richly imbedded with silver—an idea probably suggested by the silver door in the palace of the Byzantine sovereigns, which stood on the very site of the Seraglio; the door itself opening into the golden hall, which adjoined the imperial bed-chamber, and enclosed the imperial jewels and relics, amongst which shone the rod of Moses, and the holy cross, brought from Jerusalem by the Empress Helena.

The sacred standard was preserved at Damascus, as one of the most valuable memorials of the conquest of Egypt, until the winter of 1684, when it was solemnly transferred to Constantinople, and immediately afterwards was conveyed under an escort of a thousand janizaries to the grand vizier's camp at Gallipoli, where it waved for the first time over the heads of the Ottoman forces. Aali, the historian, tells us, that "the inspired warriors of Islamism frequently saw it unfold of its own accord during their holy struggles with the infidels, and stretch itself forward, flattering against the high heavens, as if borne on the wings of victory, and impatient to lead the onset of the sacred bands." H.

DRAMA.

DRURY LANE.

AN original five-act comedy by a Peer of the Realm!—could not such an announcement more than half fill the pit of Drury Lane Theatre? Where were the crowds we are daily told are so eager to rally round the standard of Thalia raised upon English ground by an English original writer? Alack! the unthinking public who read and echo such "golden opinions," provided they be pleased, care not one farthing from whence the *matériel* be drawn; and while they affect to sigh over the prostration of the Drama, and the absence of original writers, prove by their attendance that they would much rather shake their sides at such sprightly translations as the *Invincibles*, a *Roland for an Oliver*, or Lord Glengall's own adaptation of the *Irish Tutor*—than yawn, for encouragement's sake, through five acts of the most undeniable English manufacture. Not that they yawned on Saturday, by any means—Lord Glengall's comedy is light and agreeable—but they might have done so; and no feeling for the "cause of the Drama" could induce the rogues to come and pay their money till they knew whether such would be the case or not. Will they come now? It is, with us, a great question. *Follies of Fashion*, though not adapted from the French, is pretty closely adapted from the English. It has not a novel character in its *dramatis personæ*, and scarcely a situation that has not been worn threadbare: plot, it has none; moral, it has none—or rather, its whole tendency is immoral, from the general profligacy of the characters, male and female; of wit, but a slender allowance: yet there is an easy, gentlemanlike gaiety in its language, and a sufficient bustle in its action to carry the spectator from the rise to the fall of the curtain unwearied along; and it is of little use for him then to inquire of his next neighbour, "Now it's all over—what was it

all about?" The best scene is that in which *Lord and Lady Splashton* (the faint shadows of *Mr. Lovemore* and *Lady Teazle*) strive to outmanœuvre each other concerning their respective *billet-doux*; and the *drollest*, one of equivoque between *Old Counter* and *Sir Simon Foster*, in the fifth act. The actors, one and all, exerted themselves most laudably and successfully; but never in the course of our theatrical recollection did we see a play so outrageously dressed. The unmeaning frippery of the gentlemen, and the untimely splendour of the ladies—be-satined and be-feathered at eleven in the forenoon, exactly as they repair to a fashionable masquerade at the same hour in the evening—was so glaringly inconsistent, that it rather seemed an anticipation of some ridiculous modes in the womb of time (the dandies of 1929, perchance), than the representation of high life of the present day. We wonder the gentlemen's servants in the gallery did not hiss outright: we are sure they must have laughed as much at the costume as they did at the comedy. We have heard that this absurd dressing was in deference to the noble author's wish. We have a better opinion of his taste. The play was given out for repetition amidst considerable applause, and without a dissenting voice; but though a creditable production, we doubt its outliving the season.

The grand dispute between the managers of Covent Garden Theatre and Mr. Kean has ended in a sort of triumph of the latter, in consequence of the former having gone to law to punish him for the trick he played them. It would have been wiser to let this alone, and to have left the affair as it stood to the public judgment. Mr. Kean performed *Richard* on Wednesday, with great energy, and to a very crowded house. The attempts to hiss him were insignificant, and easily put down.

COVENT GARDEN.

ON Monday evening, after *Romeo and Juliet*, Mr. T. P. Cooke began his gratuitous performances as *William*, in the celebrated melo-drama of *Black-eyed Susan*. The piece deserves the popularity it has obtained on the Surrey side of the water. The unrivalled acting of Cooke drew down thunders of applause from the most crowded house of the season. Miss E. Tree's performance of *Black-eyed Susan* was exquisitely true to nature in the latter scenes. Wood sang the original ballad in a style that alone ought to fill the house; and Meadows, Egerton, Blanchard, and Turnour, were excellent in their respective characters. Altogether, we were, in common with the audience, greatly pleased; and are only sorry that our notice is too late to recommend the seeing of *Black-eyed Susan* for more than one night while she remains in Middlesex.

ADELPHI.

ON Thursday night we were indeed delighted with the *Elephant*, and never witnessed an audience so excited and so pleased as that which, on this occasion, crowded the Adelphi. The wonderful instinct and sagacity of this extraordinary animal were displayed in the drama to surprising advantage: in fact the plot entirely hinges on the deeds of the elephant; and in all the three acts she performs the principal part, and brings about the results. In the first she warns the legitimate prince of his danger, and entombs the conspirators against him for ever; in the second she fights his battles, and, uncrowning the usurper, places the crown on his head; and in the third she saves his life, enables him and his adherents to

escape (by breaking open their prison-bars, and making her own broad back a descent for them to the ground), and finally carries him and his bride in glorious pageant to mount the throne. And perhaps the still more surprising action was her return, on being called for after the fall of the curtain, and acknowledging the honour in the most graceful and gracious manner. But pages of description could not tell all her merits—her gentleness, her dancing, her feasting, her loyalty, her humanity,—she must be seen, and we are sure all London will see her as fast as this little theatre can accommodate the population. We ought not to stop without saying, that, independently of this great attraction, the spectacle itself is magnificent, and the acting excellent. Some double entendres alone offended us: they must be (we dare say they are already) suppressed. The piece concluded amidst loud and unanimous shouting; so that Mr. Yates had a poor hearing when he announced the repetition for every night till farther notice. He was happier in his delivery of a prologue (which we add), to have been spoken in the character of a beef-eater, but the licenser forbade it, as derogatory to that eminent office and station!!!

Prologue, to be spoken in the Character of Beef Eater.

Exeter 'Change, so long of just renown
For rarest beasts and brightest blades in town,
For ear-rings, elephants, pen-knives, and proboscis,
Scissors and serpents, razors and rhinoceroses,—
Soon in its fate a greater reason found,
Which raised that ancient building to the ground.
By cruel mandates to improve the town,
It was done up—by pulling of it down.
The beasts, astonished, still remained in doubt
That Woods and Forests should have turned them out
With Carlton roots—they made their common caws
Compell'd to bow to Woods' and Forests' laws.
By roars from beasts, and oaths from keepers surly,
Was Burling House thus turned to hurly-burly;
And beasts and birds sought out for other lays.
Where the King's Mews still celebrates their praise.
I was obliged their common rout to chase,
And found it quite a bore without a bear.
From that snug nook, so well known at the entry,
Where half a century had stood a sentry,
Ejected I was left to cry alone
With the great bard—"My occupation's gone."
I wandered on, but did not wander far—
These doors were open—as they always are,
To take one in. And then my lucky fates
Set up the firm of Mathews and of Yates:
And now, Gazette-like, I am come to say there
Is a partner of more weight than either—
A partner, too, that during his short term
Will make out partnership a stable firm.
But as our friends may look for an apology
For this so sudden study of zoology,
And that we may, like public-houses, feast
With entertainment both for man and beast—
I'm come to appease the hypercritic's rage
Against the greatest actor of the age,
Who always has brought down the house—almost the stage.

When first we saw him, thinking of the pelf, we
Wish'd his great carcass in the small Adelphi,
Well knowing then, from what we'd seen before,
Where'er he went he could create a roar.
But there were many obstacles to clear
Before we could contrive to get him here:
Some in the ocean said he would be sunk—
Some said the Custom House would seize his trunk—
Perhaps by law they could not let them land,
Because his Ivories were contraband—
The vessel, too, would tremble with his weight,
And captains be quite frightened with his freight—
Said we'd no room with safety here to place him,
And that our prompter would not dare to face him.
I proved the voyage easy of endurance—
I promised then that I could find assurance—
I signed and sealed, thinking the matter national,
But hoping still his rations would be rational—
Till freight all paid, his custom duties clear,
He comes himself to pay his duties here—
We hoping you your patronage will grant
To Messrs. Mathews, Yates, and Elephant.

Mr. Beazely is the author of this whimsical composition and of the drama.

Ramsgate Theatre has been destroyed by fire, and the company turped adrift.

VARIETIES.

March of Intellect.—A work, entitled *L'Art de Penser*, is amongst the Paris literary promises for January next. No doubt, therefore, we shall become a most thinking race of beings the ensuing year. A few citations from this composition have already appeared; and if we follow the wise counsels of the ingenious author, we shall pass one half of our time in ruminating on the past, and the other in meditating on the future.—*Paris Letter*.

Domestic Improvements.—We had recently occasion to mention a useful and economic invention of Dr. Sloane of Cork, in consequence of a Parisian having brought forward the same as a novelty. The Dr. has also invented a tallow lamp on an entirely new principle. This lamp, simple in its construction, will burn any kind of tallow, lard, or grease, giving a pure light, and varying in intensity at pleasure, from the dim flame of the chamber rush-light to the broad glare of the finest gas. It appears to be peculiarly fitted for shops, manufactories, blow-pipes, or dining-rooms, and may be manufactured for the low price of two shillings,—but is at the same time capable of being made an elegant appendage to the drawing-room. This invention promises to do away entirely with the inconvenience arising from the want of pure oil—carelessness of servants, spattering of carpets, &c.; being so easily trimmed, that a child of ten years old can fit it for burning in three minutes; while it is as portable as any bed-chamber candlestick. When moderately lighted, Dr. Sloane's lamp will give the light of eight mould candles of four to the pound, consuming at the same time the tallow of four. When reduced to its minimum blaze, the tallow of a farthing rush-light is not consumed. As the inventor intends to apply for a patent, we can tell no more than has been told to us respecting this new light.

Mechanics in France.—We are glad to observe that our neighbours in France are sedulously directing their attention to improvements in the mechanical arts. The *Recueil Industriel*, ably edited by M. de Moléon, and of which we have looked over several livraisons, contains much useful and interesting information on these pursuits.

Canova.—We learn from the Italian newspapers, that a most singular distribution has been made of the mortal remains of the celebrated Canova. The new church erected on his plan, and at his expense, at Possagno, his birth-place, is destined to receive his body. His heart had been deposited at the Academy of the Fine Arts at Venice; but it appears that this has given rise to some discussion, and in consequence it has been determined that it should be placed under a cenotaph in the church *Dei Frati* at Venice. The Academy, resolving to possess a portion of the mortal relics of Canova, addressed M. Canova, the brother of the artist at Rome, requesting to have the *right hand*, with which the sculptor executed so many *chefs-d'œuvre*. M. Canova has consented, stipulating, that in case the Academy of Venice should be suppressed, or removed to another city, it shall restore this deposit to the high priest of the church of Possagno, to be re-united to the rest of the body. The Academy of Fine Arts at Venice have obtained possession of the right hand of Canova, and a notary has drawn up the conditions insisted upon.

New Music.—The French residents at Leghorn observed St. Charles's day this year

with grand ceremonies; and, among other things, we notice from the foreign journals, a grand mass, composed by Lord Burghersh, whose musical genius is held in such high estimation, was performed with extraordinary effect in the church of the *Minori Osservanti*.

Domestic Economy.—The *Magasin für Naturvidenskab* gives the following method of extracting glass stoppers from bottles, when they have become fixed, and cannot be removed without a chance of the bottle being broken, and the contents lost. Take a woollen band, pass it round the neck of the bottle, and hold one end, whilst another person holds the other, then draw the band backwards and forwards very rapidly, and the heat occasioned by the friction will expand the mouth of the bottle sufficiently to permit the stopper to be extracted. M. A. Chevallier has indicated another method, which consists in heating the neck of the bottle with hot charcoal, or by the flame of a spirit lamp, taking care to turn the neck, so as to heat every part of it equally. If part of the stopper should happen to be broken, the neck of the bottle is to be heated in the manner related, and enveloped in linen, leaving the neck free; and upon gently tapping the bottom of the bottle, the stopper will rise.

Improvement in the Breed of Horses in France.—The Duke de Guiche has lately published a very interesting paper on the improvement of the breed of horses; in which he proposes to confine them to two distinct classes—one of light horses, to be obtained by crossing with English horses and Arabian mares, which class would include race-horses, saddle-horses, cavalry-horses, coach-horses, and all those employed in post-work and for light agriculture. In the second class he includes waggon-horses, horses for the more laborious works of agriculture, and all horses for slow and heavy draught. He proposes to establish for each of the two classes a number of *haras*, proportioned to the extent of the respective demand. The Duke de Guiche advances many sensible arguments in favour of his plan; and proves that as the soil and climate of France are decidedly favourable to the breeding of horses, there is no reason why, with judicious crossing, they should not be quite as good as those of Great Britain. The plan has been taken up warmly by the French government; and it is expected that it will be carried into almost immediate execution.

Education in France.—It appears, from an account in the *Voleur*, that there are in Paris 577 priests; 80 charity schools, with 12,000 pupils of both sexes; 403 elementary schools, of which 112 are gratuitous, with 25,582 pupils; 7 colleges; 118 boarding schools for boys, at which there are 7,669 pupils; 329 boarding schools for girls, with 10,240 scholars; and for the higher branches of education, 20 public establishments, most of which are supported by government, with 317 professors, and 17,823 students: thus making the number of persons receiving education in Paris 73,222—about one-tenth of the population.

Paris Academy of Sciences.—At the sitting of the Academy of Sciences in Paris on Monday last, a report was read, giving an account of several experiments performed by order of the Academy, for the purpose of determining the tension of vapours in high temperatures. It was stated, that many of these experiments had been attended with great danger; but that they had produced the important result of the discovery of a new invention for a sucker, by which all accidents in steam-engines may be avoided, when the tension becomes greater

than is necessary for the required service. At this sitting M. Eugène Robert announced, through one of the members, the discovery of some fossil crocodiles' teeth, and the remains of lophydone at Boulogne, near Paris.

Naval Surgeons.—Under the sanction of the Admiralty, Sir Gilbert Blane has founded a prize medal, to be given annually for the best journal kept by a surgeon of the Navy.

Westminster Play.—On Wednesday this annual exhibition took place at Westminster School: the play was *Phormio*. The young gentlemen who played the principal parts acted like veterans; but their clothing savoured strongly of Monmouth Street.

Fernando Po.—It is with much regret we learn, that recent accounts from Fernando Po are very unfavourable as to its salubrity. Among the recent deaths is that of Col. Nicolls, who succeeded Captain Owen as governor of the island.

Paris.—Were it the fashion to give soirées after the manner of M. Laurent, says a letter to us from Paris, we should not be seized with spasmodic yawnings on our return home. Madame Malibran, Mlle. Cinti and Sontag, assisted at an entertainment given by this amateur a few evenings ago, and enchanted the assembly by their vocal talents: the *Trio del matrimonio segreto*, as performed by these queens of song, was enthusiastically applauded.

LITERARY NOVELTIES.

The Memoirs of Madame du Barri, Mistress of Louis XV. of France, forming three vols. of "Autobiography," is announced.

The Life of Sir Walter Raleigh, in two volumes, is nearly ready for publication, from the pen of Mrs. Thomson, the popular author of the *Life of Wolsey*, and *Memoirs of Henry VIII.* and his Times.

Dr. Conolly, Professor of Medicine in the University of London, is preparing for publication an Inquiry concerning the Indications of Insanity.

In the Press.—The Elements of Hebrew Grammar, with a Praxis, by the Rev. W. T. Phillips.—A Compendium of Astronomy, adjusted to the improved state of the Science, and an Astronomical Dictionary, by R. T. Linnington, author of the *Companion to the Globes*.

LIST OF NEW BOOKS.

Lardner's Cyclopaedia, Vol. I. Scott's Scotland, Vol. I. fcp. 8vo. 6s. cloth.—Thomson's London Dispensatory, 5th edition, 8vo. 15s. bds.—Christian on Poisons, 8vo. 16s. bds.—Marshall's Naval Biography, Supplement, Part III. 8vo. 15s. bds.—Pring's Intellectual and Moral Relations, 8vo. 15s. bds.—Zoological Keepake, 1830, 6s. 6d. silk.—Bradfield's Atheniad, a Poem, 12mo. 7s. 6d. bds.—Reid's Elements of Practical Chemistry, 8vo. 14s. bds.—Coxe's Liturgy Revised, crown 8vo. 6s. bds.—The Exclusives, 3 vols. post 8vo. 12. 11s. 6d. bds.—Private Memoirs of the Court of Louis XVIII. 2 vols. 8vo. 12. 4s. bds.—Time's Telescope, 1830, 12mo. 9s. bds.—Brassé's Antiquae Sophocles, English Notes, crown 8vo. 6s. bds.—East India Register, 1830, 10s. sewed.—Recreations in Science, 12mo. 3s. 6d. bds.—Health without Phisic, 12mo. 7s. 6d. bds.—Vegetable Cookery, 12mo. 4s. cloth.

TO CORRESPONDENTS.

The Editor is not aware that the Stanzas by F. E. H. are intended for insertion.

ERRATA.—In our last notice of the Royal Society of Literature (No. 670), p. 764, speaking of Sir W. Ouseley's collection of Oriental Alphabets, we inadvertently wrote (line 27) "several hundred," instead of *sixty*.—And in our last (No. 671), in the mention of "Nine Embossed Medallion Portraits," the artist's name should be *Westwood*, not "Wrentmore."

ADVERTISEMENTS

Connected with Literature and the Arts.

LONDON ORIENTAL INSTITUTION,
No. 3, South Crescent, Bedford Square, under the direction of HENRY ADAMS, Member of the Asiatic Society of Paris, and DUNCAN FORBES, A.M.

This Seminary, which, since it was established by the Hon. East India Company, has prepared nearly 3000 youths for India, is expressly formed to meet the present demand of the public service, and the new Oriental Test lately enacted for Writers. The Oriental Languages (Persian, Hindustani, Bengali, and Arabic), are taught here with their true pronunciation, and in their proper characters, by persons who have acquired them among the learned natives of the East. The same system is followed as at Haileybury and Addiscombe, and at the India House Examinations, for all of which it serves as a preparation. Respecting its merits and efficiency, reference may therefore be made to the Oriental Examiner at the East India House, or any other competent judges.

Daily Classes at 2s. 6d. per mensem. Board and Education at 100 Guineas per annum.
Further information may be obtained by application to Mr. J. M. Richardson, 22, Cornhill; or at the Institution, No. 3, South Crescent, Bedford Square.

THE COURT JOURNAL.

The attention of the public, and of the fashionable world in particular, is respectfully invited towards this new and popular weekly journal, the whole impression of which being now stamped, subscribers may receive and transmit it to their friends, postage free, throughout all parts of the Kingdom.

The occupations, engagements, and amusements of the higher classes of society had long required a record, and they have found it in the Court Journal. The public and private habits of royal and noble life, those habits which give the tone to manners throughout the empire, are here depicted with a freshness and accuracy hitherto unattained. But the Court Journal presents itself as the companion not merely of the drawing-room and the boudoir, but of the breakfast-table and the study. Being (unlike all other literary journals,) published on stamped paper, it is enabled to supply, in addition to its leading and peculiar features, information on every topic of passing interest, thus rendering the Court Journal a weekly newspaper of an entirely new, improved, and valuable nature.

As a medium for advertisements connected with literature, works of art and fashion, the advantages possessed by this paper must be too apparent to require remark.

The Court Journal is published every Saturday Morning, on a handsome sheet of sixteen quarto pages, containing 48 columns, price 10d. and may be received on Sunday in all parts of the country, postage free.

Published for Henry Colburn and Richard Bentley, by W. Thomas, at the Office, 19, Catherine Street, Strand.
Orders are received by all Booksellers and News-vendors, and by the Clerks of the Roads.

Advertisements and Communications for the Editor are requested to be sent to the Office.

MESSRS. EBERS'S BRITISH and FOREIGN SUBSCRIPTION LIBRARY, Old Bond Street, London.

In this extensive establishment, which for the last twenty years has been considerably enlarged, Subscribers are supplied, immediately on application, with all the publications of the day. The abundant supply of every new work affords signal accommodation to residents in the country, however distant from the metropolis, to whom can be secured every advantage, as far as literature is concerned, which even a residence could confer. The general lover of the belles lettres, and of the fine arts, will also be amply accommodated in this institution, which embraces not only every department of literature, ancient and modern, but includes a splendid

ILLUSTRATIVE LIBRARY,
Consisting of Engravings from the first Masters, Plates of Costume, Atlases, &c.

The Terms and Regulations of the Library have been accommodated to meet the views and habits of different Classes of Readers. It will probably be found, that in the extent of publications comprised in the library, and the antient provision made for meeting the wishes of Subscribers, the present Establishment is unequalled by any similar one in the Kingdom.

This day is published by R. Ackermann and Co. 96, Strand; and to be had of all Printers in Town and Country, a faithful and pleasing

PORTRAIT of these INTERESTING YOUTHS, from the only Drawing taken of them since they have been exhibited at the Egyptian Hall.
Price, Proofs on India paper, 8s.; Prints, 1s. 6d.

To the Trade.—The Bramahian Patent Lock.
S. MORDAN and CO. Patentees of the Ever-Pointed Pencil, are now manufacturing the late J. Bramah's Lock with Seven Guards, as the Four and Five Guards cannot be depended on, from the circumstance of such an alarming number of duplicate Keys (almost to be found on every bunch) now in use, that should be remembered that most serious robberies are committed by persons gaining admittance by duplicate keys, and relocking to lull all suspicion: robberies are thus almost daily occurring without detection. The Lock S. Mordan and Co. recommend with confidence to the thief or the cautious. See them in use at the Marine Gallery.
No. 23, Castle Street, Finsbury, London.
P.S. Should the Key be exposed, any attempt to take an impression to make a fac-simile would fail; an advantage over all other Keys. Architects, &c. are now enabled to introduce this Lock, as its price is only that of the best common Locks.

BOOKS PUBLISHED THIS DAY.

Pocket Edition of *Griessbach's Greek Testament*.

NOVUM TESTAMENTUM GRÆCÆ.
Re revisione JO. JAC. GRIESSBACHII, cum selectis lectionum variis.

Handsome printed in royal 8vo. price 12s. boards.
ÆSCHYLUS AGAMEMNON. GRÆCÆ.
Textum ad fidem Editionum, præsertim Biondisianæ, recognovit, Notæque Anglicæ conscripsit et Indices adjectos Jacobus KENNEDY, S.T.P. Collegii S.S. Trinitatis apud Dublinenses Socius. Teutic: Uebersetzt von Heinrich Voss. English: Translated by JAMES KENNEDY, D.D.
Dublin: Printed at the University Press, for C. J., G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, London; and also by W. Walker, Wakeman, D'Olier Street; R. Milliken and Son, and John Cunningham, Dublin; and Blackwood, and Bell and Bradfute, Edinburgh.

THE FOREIGN QUARTERLY REVIEW.

Price 7s. 6d. No. IX. of
Contents.—Art. I. Bourrienne's Memoirs of Napoleon.—II. Wallenstein, with Translations from Schiller's Camp.—III. Present State of Spain.—IV. Greek Romances.—V. Heeren on the Policy and Commerce of the great Nations of Antiquity.—VI. Dialects and Literature of Southern Italy.—VII. Pachó's Travels in Marmarica and Cyrenaica.—VIII. Early Roman History.—IX. Four Months in Belgium and Holland.—X. Recent Progress of Physical Astronomy.—XI. History of the Fine Arts.—XII. The Greek Revolution, and European Diplomacy.—XIII. Notice of M. Dumont. Critical Sketches: XIV. Ippolito Pindemonte.—XV. Gorizia's Theatre.—XVI. History of the Inquisition in France.—XVII. Ugo Foscolo.—XVIII. Caroline Wolzmann's The Sculpture, a Novel.—XIX. Barthelmy and Méry's Waterloo, a Poem.—XX. Miscellaneous Literary Notices.—List of the principal Works published on the Continent from July to October.

No. X. will be published in Feb. 1830.
Published by Treuttel and Würtz, Treuttel, Jun., and Richter, Foreign Booksellers to the King, 30, Soho Square.

New Work on Chemistry.
Just published, in 1 large vol. 8vo. price 16s. boards, with Engravings.

A CHEMICAL CATECHISM, in which the Elements of Chemistry, with all the recent Discoveries, are very clearly and fully explained. Illustrated by Notes, numerous Engravings, select Chemical Experiments, and a Vocabulary of Terms.

By T. J. GRAHAM, M.D. &c.
"We esteem and recommend it. Every subject of interest connected with this delightful science is treated of in the clearest manner."—*London Weekly Review*, 21st Feb. 1829.

"Every thing is here written up to the latest date, and the work cannot fail, so to speak, of being found eminently useful. The more important facts are exhibited with remarkable clearness, and the author has completely succeeded in supplying the defects of Mr. Parkes's book."—*Monthly Magazine*, 1st March, 1829.

"The necessity of a clear, progressive view of chemistry is obvious, and the want of such a treatise has long been felt by students. Dr. Graham has well supplied the want. His book is systematic and comprehensive, perspicuous in its plan, and extensive in its compass. Unlike former analyses, it does not confound and complicate the various parts of the science, but ascends from the first principles and simple elements to the most complicated and illustrative branches of the study. It is eminently calculated to afford agreeable relaxation to the uninitiated, and to improve the knowledge of the learner. It is very superior to Parkes's."—*Atlas*, 1st March, 1829.

"It contains an immense quantity of valuable information."—*Monthly Observer*, 1st April.
Published by Simpkin and Marshall, Stationers' Court, London. Sold by all Booksellers.

Of whom may be had, just published, a new edition, price 6s. 6d. boards.

2. The Art of Prolonging Human Life; shewing the most safe and certain means of establishing a healthy Constitution and prolonging Life. By G. W. Hufeland, M.D. First Physician to the King of Prussia, Counsellor of State, and Professor of Medicine in the University of Berlin, &c.
"We recommend it strongly. The valuable information it contains is conveyed with a felicity of style and illustration that must render it exceedingly popular."—*Spirit and Manners of the Age*, 1st Oct.
"Hufeland's talents are too well known to require our formal praise. This long-celebrated work will be found both instructive and entertaining."—*Medical and Physical Journal*, 1st Nov.

OLIVER CROMWELL, a Poem, in Three Books. 12mo. 6s. boards.

Also, by the same Author,
A Glance at London, Brussels, and Paris. 12mo. 6s. boards.

Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

Just published, in small 8vo.
THE DIURNAL REMEMBRANCER; or, Private Diary for 1830.

This publication, though adapted for general use, is more particularly useful as a diary, to record the occurrences of private life; and to those who keep a memoir of daily events, will be found eminently instructive and interesting, peculiarly so, from its convenient size, to tourists, voyagers, and travellers. To each day is given a sentence, taken from the highest and purest source, calculated to guide and assist in the due government and direction of the mind and actions. It is suggested that such observations daily recurring to the eye, must be attended with a highly beneficial influence, and tend to promote and extend the growth of the more exalted feelings. A selection of the most useful tables, and information of general utility, accompany this work.

London: Published by B. Dunn and Son, 9, Fleet Street; and may be obtained upon application to any Bookseller.
Price 6s. containing paper for six days's memoranda; 6s. half a page for each day.

Family Library.
A new edition, in 2 vols. price 10s. 6d.
NAPOLEON BUONAPARTE, forming Nos. I. and II. of the Family Library.
John Murray, Albemarle Street.
In a few days will be published,
The Court and Camp of Buonaparte, in vol. with Portraits; being No. VIII. of the Family Library.
Also a new edition of
The Family Library, No. III. being the Life of Alexander the Great. In 1 vol. with Maps.

With the sanction of the Council of the Zoological Society, on December 18th, will be published, No. III. price 8s. 6d. of
THE GARDENS and MENAGERIE of the ZOOLOGICAL SOCIETY DELINEATED; being Descriptions and Figures in Illustration of the Natural History of the Living Animals in the Society's Collection.
Published with the sanction of the Council, under the Superintendence of the Secretary of the Society, N. A. Vigors, Esq., and B. T. Bennett, Esq. the Vice-Secretary.
The whole of the Drawings will be made by Mr. W. Harvey; and the Engravings executed by Messrs. Cranstoun and Wright, and other eminent Artists.
Printed at the Chiswick Press, by C. Whittingham, for the Proprietors: Published by Thomas Tegg, Chancery; and K. Hailes, Piccadilly.

Just published, by R. Ackermann and Co. Strand, price 15s.
FORGET-ME-NOT; a Christmas, New Year's, and Birthday Present for 1830.
The Forget-Me-Not has peculiar claims to attention; as the first and founder of the race it goes on improving; it well deserves to retain its accustomed place in public favour. —*Literary Gazette*.

* Former Volumes having been generally examined before Christmas, an early application for Copies is recommended.
Also a new Annual for Youth, nearly done up in a Case, price 8s. entitled,

Ackermann's Juvenile Forget-Me-Not; a Christmas, New Year's, and Birthday Present for 1830.
"The most elegant of all the juvenile Annals. The stories and poetry too are good, and well adapted for youth, which is the great thing."—*Edinburgh Literary Journal*.
* Another work for youth having secured the title of Forget-Me-Not, Purchasers are requested to be particular in ordering "Ackermann's Juvenile Forget-Me-Not."

Handsome printed in post 8vo. in cloth, gilt edges.
THE MAID OF SCIO. A Tale of Modern Greece. In Six Cantos.
By ELEANOR SNOWDEN.
Published by Whittaker, Treacher, and Co. 13, Ave Maria Lane.

THE MONTHLY MAGAZINE, New

Series, for December, price Half-a-Crown, contains—

Mummies at the Carmelite Convent, Brunsell.—XII. Notes on Affairs in general, and the following in particular.—Lord Mayor's Day. To be an Alderman.—Vice-Admiral Cordington Commander-in-Chief of the Russian Navy.—Roman Catholic Sheriff.—Wolfe, the Jew, and Lady Georgina.—Sir Richard Phillips and the Poet—Lord Levegh and the drama of Man and Woman.—The Bishop of Crown Lawyers in Ireland.—The Prince of Wales.—The Prince of Wales and the Duke of Mount Cashel and Bishop Ferns.—Average Livings in England and Ireland.—March of Intellect.—Ramas and Pans.—Omnibus.—Pawest and the Covent Garden Fund.—Reviews of New Books.—Reports.—Patents.—List of New Books in preparation and lately published, &c. &c.

Whittaker and Co. London; Wagh and Innes, Edinburgh; and J. M. Leckie, Dublin.

A JOURNEY THROUGH NORWAY, LAP-

LAND, and Part of SWEDEN, with some Remarks on the Geology of the Country, its Climate, and Scenery; the Account of some of its principal Mountains; the present Political Relations of the Two Countries; Statistical Tables, Meteorological Observations, &c.

By the Rev. ROBERT EVEREST, A.M. F.R.S.
Late of University College, Oxford.
Printed for T. and G. Underwood, 25, Fleet Street.

History of England.
In 2 vols. 8vo. price 11s. 1s.

CONVERSATIONS on the HISTORY of ENGLAND, illustrative of Events, Institutions, Manners, and Literature, from the earliest Ages to the Accession of the House of Tudor, in 2 vols.

By STEPHEN REYNOLDS CLARKE.
Printed for T. and G. Underwood, 25, Fleet Street.
This work, exhibiting English History in a new and instructive form, is particularly adapted to the general reader, to young persons of both sexes, and to the higher classes in schools.

In royal 8vo. price 1s. 6d. and royal 12mo. price 1s.

A SERIES of SKETCHES of the existing LOCALITIES alluded to in the Waverley Novels. Etched from original Drawings.

By JAMES KNEE, Esq.
The Two Numbers now published are illustrative of the Novels of Rob Roy.

No. VII. also illustrative of Rob Roy, will appear on 1st January.
Printed for T. Cadell and Co. Edinburgh; and Simpkin and Marshall, London.

Of whom may be had,
Nos. I. to IV. illustrative of Waverley and Guy Mannering, price 1s. 6d. and 1s. each.

Architectural Library, 50, High Holborn.
Recently published, handsomely printed in 2 vols. 8vo. and illustrated by 574 Engravings, price 12. 6s. boards.
A MANUAL OF NATURAL AND EXPERIMENTAL PHILOSOPHY; being the Substance of a Series of Lectures delivered in the London, Russell, Surrey, and Metropolitan Institutions.
By CHARLES F. PARTINGTON, of the London Institution.
Printed for J. Taylor.

Where may be had, lately published, by the same Author,
An Historical and Descriptive Account of the Steam-Engine, comprising a general View of the various Modes of employing Elastic Vapour as a Prime Mover, &c. &c. With a List of Patents, &c. In 8vo. illustrated by 53 Engravings and other Figures, price 10s. boards.

Patonson Clark on the Teeth.
In 1 vol. 8vo. 8d. edition, engravings, boards.
A NEW SYSTEM OF TREATING THE HUMAN TEETH, CURING TOOTHACHE, TIC DOULOUREUX, &c. With Cases.
By J. PATERSON CLARK, M.A. Dentist.

"An interesting work on the treatment of the teeth, preferring preservation to extraction. Altogether, we look upon this as a very important discovery, which medical men will treat with great regard, and the heads of families will find delight."—*Literary Gazette.*

"Mr. Clark's arrangement of his subject deserves unqualified praise. As an essay upon the treatment of dental malady, we possess no work of equal merit."—*Atlas.*

Printed for Longman, Rees, Orme, Brown, and Green, Paternoster Row; and the Author, No. 4, Sackville Street.

In 3 vols. post 8vo.
OLD COURT. A Novel.
"A book of great intelligence and merit."—*Literary Gazette.*

"This romance is the work of a very able pen. The characters are strongly, we had almost said pictorially, conceived; and the thoughts are condensed and masculine. The story details the loves and sorrows of an Irish beauty, Grace Oldcourt, whose heart has been bewitched by the charms of an Irish soldier, Sir Walter D'Arcy, the last relic of a long line of Irish fox-hunters, and inheriting all their habits of carelessness and luxury, their gallantry, and their want of principle."—*Court Journal.*
Henry Colburn and Richard Bentley, 8, New Burlington Street.

In 3 vols. post 8vo.
GERALDINE OF DESMOND; or, Ireland in the Reign of Elizabeth. An Historical Romance.
"The work will take its station among the best historical romances that have been written."—*Cheltenham Chronicle.*

"One of the finest and purest impersonations which the genius of fiction, working upon the pages of history, has yet produced."—*Geraldine of Desmond* is, in our opinion, a work of the highest merit."—*Cheltenham Mercury.*

"We have not perused a production of modern days in which we have been more deeply interested, or more greatly surprised."—*Morning Journal.*
Henry Colburn and Richard Bentley, 8, New Burlington Street.

THE NEW MONTHLY AND LONDON MAGAZINE for December.

Contents.—On the Bonnets of Shakespeare, by Thomas Campbell, Esq.—The British Empire in the Year 1839; the National Debt—What has Emancipation done for Ireland?—The Catholic Association; the Roman Catholic Church; Maynooth College; Mr. Canning; Lord Plunket; Charles Mr. Connell—Sketches and Recollections. No. 1. Dick Ferris—Anecdotes of Russia; Russian Prisons, Police, &c.—London Lyrics; Jack Jones; the Recruit—Characteristics of Rosini's Compositions—Recollections of a Göttingen Student; Hanover; the Botanical Garden—Travelling Troubles. No. 2.—Dr. Edmund Calamy's Historical Account of his own life—Times reviewed—Walks in Rome and its Environs. No. 30; the Ghetto degli Ebrei—the last Song of Corinna—Hero-Worship—Love among the Brothers—Smiles—Political Events—Critical Notices of New Publications; the Borders—Glorious of Waterloo, &c.—The Drama—Music—the Fine Arts; British Literature—Literary Society—Royal Society of Literature, &c.—Rural Economy—Useful Arts—New Patents—Biographical Memoirs of eminent Persons lately deceased—Provincial Occurrences, &c. &c.
Henry Colburn and Richard Bentley, 8, New Burlington Street.

In 3 vols. post 8vo.
TALES OF AN INDIAN CAMP.

Contents.—The Mother of the World—the Man of Ashes—the Phantom Women—the Fire Spirit—the Lake of the White Ganges—the Devil of Calcutta—the Bird of Agony—the Wanda's Bon—Pomahar, the Flying Bear—the Triton's Paradise—the Two Ghosts—the King of the Elks—the Island of Eagles—the Idols—Sakechak, the Hunter—the Two Chappewees—the Alarm of the Great Sentinel—the Great Hare—Love and War—the Origin of Women, &c. &c.
Henry Colburn and Richard Bentley, 8, New Burlington Street.

EGYPTIAN HIEROGLYPHICS. The

Four Fasciculi of Egyptian Hieroglyphics by the late Dr. Thomas Young, of which the first two were printed in conjunction with the Egyptian Society, and the Continuation, the last two, under the auspices of the Royal Society of Literature, are now to be procured, price Eight Guineas, at J. Murray's, Albemarle Street, the publisher to the R.S.L.; or at the Apartments of the Society, No. 2, Parliament Street, where, also, Members are entitled to receive their Copies at half the above price. These Fasciculi greatly elucidate the progressive discoveries which are making in ancient Egyptian and Sacred History, and the Council of the R.S.L. have directed the Fifth Fasciculus (also a very important one, selected from Dr. Young's posthumous Papers, and containing the preceding Parts, of Twenty lithographed Plates) to be prepared for immediate publication.

HEALTH WITHOUT PHYSIC; or, Cerebral, for Youth, Manhood, and Old Age, including Maxims, Medical, Moral, and Facetious, for the prevention of Disease, and the attainment of a long and vigorous Life.
By an OLD PHYSICIAN.

With a beautiful Emblematical Frontispiece, designed by Richter. In 1 vol. 18mo. price 7s. 6d.
Edinburgh: Wilson, 60, Royal Exchange.

Countess of Devon and Lady Anne Beckett.
LA BELLE ASSEMBLEE for December, to which is united "Ackermann's Repository of Fashions," contains Two beautiful Engravings, the Countess of Cavan, from the Painting of M. A. Shee, Esq. R.A. and an entirely new Engraving of Lady Anne Beckett, from a Painting by Mrs. Mee. It will also exhibit Four Plates of the London and Parisian Fashions, and Two Plates of Natural History—in all Eight Engravings, with the Titles, Index, Contents, &c. to complete the volume.

The January Number will be enriched by a Portrait of Her Royal Highness the Duchess of Cumberland; and the following distinguished Portraits will appear in succession—Her Serene Highness Princess Esterházy—the Marchioness of Carmarthen—Countess Gower—Countess Verulam—Lady Normanby—Lady Charlotte Bury—Countess of Wicklow—Lady John Thynne—Hon. Mrs. Hope—Countess of Errol, &c. &c.

A few Sets containing the impressions of all the Plates may still be had. Proof impressions of the Portraits to be had of Mr. Colnaghi, 28, Cockspur Street.
Published by Whittaker and Co. London; and Waugh and Innes, Edinburgh; and J. M. Leckie, Dublin.

In 8vo. with many Wood Engravings, 10s. 6d.
DR. ARNOTT'S ELEMENTS OF PHYSICS, or NATURAL PHILOSOPHY, General and Medical, Vol. II. Part I. comprehending the Subjects of Heat and Light.

At the same time appears
A Fourth edition of Vol. I. (21s.); among the Additions to which is a complete Exposition of the Nature and easy Cure of the Defect of Speech called Stuttering.
Published by Longman, Rees, Orme, Brown, and Green.

THE ETON COMPARATIVE ATLAS OF ANCIENT AND MODERN GEOGRAPHY, from original Authorities.

By A. ARROWSMITH, Hydrographer to the King. Containing 33 coloured Maps, on a new Plan, is lately published, 21. 2s. boards; or 21. 15s. full coloured and half-bound. The Work is accompanied by a Set of Sixteen Outlines for Copying, and an Index of all the ancient Nations.
"It is a work of the most essential service to every man of liberal education, and worthy of introduction into every respectable school in the kingdom."—*New Monthly Magazine.*

Just published, reduced from the above,
Arrowsmith's Atlas of Ancient Geography, for the Use of Schools, containing 33 coloured Maps, and an abridged Index of all the Names, 15s. half-bound. To be had of the Author, Becho Square, at the Book Warehouse, Red Lion Court, Fleet Street; and at all Booksellers.

Practice of Cookery—Second Edition.
In 1 thick vol. price 7s. 6d. boards.
THE PRACTICE OF COOKERY, adapted to the Business of every-day Life.
By Mrs. DALGARNS.

Every Receipt in this work has been carefully revised for this edition, in order that advantage might be taken of the numerous valuable criticisms by which it has been honoured in every part of the empire.

A considerable number of new receipts have also been added; but only such as the Author has had adequate means of ascertaining to be valuable—a principle which has been scrupulously adhered to throughout the volume.—*Author's Preface* to the Second Edition.
Printed for Cadell and Co. Edinburgh; Simpkin and Marshall, London; and sold by all Booksellers.

"We consider we have reason strongly to recommend Mrs. Dalgarne's as an economical, useful, and practical system of cookery, adapted to the wants of all families, from the tradesman to the country gentleman. It is not a gourmand's book, nor does it pretend to be; and though we shall not put away Rundell and Kitchen for Mrs. Dalgarne's, she is far more copious than they are, far more various, and to us more novel."—*Spectator.*

Nearly ready, and to be had as above,
Tales of a Grandfather, Third Series. By Sir Walter Scott, Bart.

 May be had of Messrs. Deighton, and Stevenson, Cambridge; and of T. Cadell, Strand, London.

Price One Guinea, with upwards of Seven Hundred Embellishments.

THE YOUNG LADY'S BOOK. This

Work is not an Annual, and essentially differs from the whole class of Literary Gifts usually presented to Young Ladies; being a complete Manual of all those elegant pursuits which "grace the person, or adorn the mind." The various subjects have been considered to proficiency in their several departments; and the Engravings have been executed in the best style of the art. The volume is richly bound in silk, and altogether decorated in a style of novelty hitherto unattempted.

Few works have been received with such unanimous and unqualified approbation by the public press. The following is an abridged selection from a few of the many favourable notices with which it has been honoured:—

"We shall find it difficult to speak of this volume in terms sufficiently expressive of the admiration with which we have perused it, with which an extended use of it has filled us. It is not only a curiosity, but a beautiful curiosity, and no less excellent in its useful qualities, than it is elegant in its decorative parts. A few years ago, all the talents in England could not have produced such a work."
Literary Gazette, Oct. 31, 1839.

"The 'Young Lady's Book' from the splendour of its appearance, the excellence of its execution, and the intrinsic value, and its peculiar suitability, is the most acceptable offering that can be paid at the shrine of youth and beauty; and, altogether, is one of the most elegant volumes of its kind."
La Belle Assemblée, for Dec. 1839.

"The 'Young Lady's Book' surpasses all the Annuals in its external splendour, and is far superior to them in the character of its subject. At the same time it is itself a medium of general instruction in science, it is an actual wonder of art."
Spectator, Nov. 8, 1839.

"This is not an Annual, but an evergreen; a gem in its way; containing a clear and neatly written epitome of all those amusements that are appropriate to young ladies, and mixing its instructions with such a pleasant versatility of attractive matter, that we have no hesitation in recommending it to the boudoir and the drawing-room."
Atlas, Nov. 3, 1839.

"The 'Young Lady's Book' will enjoy a more permanent popularity than any of its competitors during the present gift-giving season."
Court Journal.

"The 'Young Lady's Book' is a present far more useful and instructive than any thing we have seen since the new fashion of yearly publications has obtained. This book contains a sort of encyclopedia of female arts and accomplishments; indeed, a collection of every thing with which the most delicate and refined of our young ladies should be acquainted."
John Bull, Nov. 29, 1839.

"Whether we view it in the light of a moralist, an instructor, or as a gay companion, entering into all the elegant accomplishments which add a grace to virtue, we still find it unexcelled, both in matter and manner, and altogether one of the most acceptable presents that could be offered to a young lady."
Morning Post, Nov. 17, 1839.

Published by Vizetelly, Branstetter, and Co. 135, Fleet Street.

Waverley Novels, New Edition, with Introductions and Notes by the Author.

ROB ROY, Vol. I. forming Vol. VII. of this edition, has just been published, price 3s.

Vol. II. being the completion of this Novel (Vol. VIII. of the edition), will appear on the 1st of January.

Waverley, Guy Mannering, and the Antiquary, each in 3 vols. and forming Vols. I. II. III. IV. V. and VI. of the new edition, are again reprinted.

The Tales of my Landlord, Vol. I. (Vol. IX. of the new edition) will appear on the 1st of February, 1839.

The Publishers have the satisfaction of announcing, that this volume is illustrated with Designs by Wilkie.

Old Mortality, Vol. II. by Cooper and Barnet.

The Heart of Mid-Lothian, by Burnet, Stephano, Kidd, and Fraser.

The Bride of Lammermoor, by Stothard, E. Landseer, Stephano, and Farrier.

The Legend of Montrose, by Clint and Boral.

"This new edition of the Waverley Novels having, at this early stage of its progress, attained a degree of success unprecedented in the Annals of Literature, the Proprietors have the pleasure of stating, that they are in consequence enabled to bring forward Duplicate Engravings, on Steel, of the whole Designs of the respective Artists. This course has been adopted, that every purchaser may depend on receiving unobscured good impressions, notwithstanding the very large number of copies printed."

Published by Cadell and Co. Edinburgh; Simpkin and Marshall, London; and sold by every Bookseller in Great Britain and Ireland.

Elegantly bound in rich crimson silk, price 12s.
THE LITERARY SOUVENIR for 1839.

 M. De la Claverie
 The Editors, &c. &c.

Published by Whittaker, Treacher, and Co. Ave Maria Lane, London; and George Smith, Liverpool.

"The literary part is remarkable for having many contributors whose names are not to be found in the other Annuals, besides many well known to the public. In point of merit the volume ranks high."—*New Monthly Magazine*, November.
 "The very appearance of the 'Winter's Wreath' puts to flight every gloomy idea associated with the season. It is cheerful, not only in its illustrations, but in its poetry and prose generally so."
Monthly Review.

"This Annual may confidently challenge comparison with any of its competitors. In point of decoration and execution."
Monthly Magazine, November.

In 3 vols. 18mo. with 14 Plates, price 1l. 7s. bound in cloth.

SATURDAY, DECEMBER 12, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Narrative and Successful Result of a Voyage in the South Seas, performed by order of the Government of British India, to ascertain the actual Fate of La Pérouse's Expedition, &c. By the Chevalier Capt. P. Dillon. 2 vols. 8vo. London, 1829. Hurst, Chance, and Co.

A MODEST preface, though speaking of the peculiar claims of this voyage (through tracts and among savage tribes never before fully explored) on the public attention, bespeaks indulgence for the author as a literary man, on the score of his professional education and habits. It is the first essay of an unpractised pen; but as we have to do with facts,—for ourselves we must confess that we prize it the more, on account of the absence of those qualities which are the essentials of what is significantly called book-making.

An introduction gives a concise view of the Voyage of La Pérouse in the Boussole and l'Astrolabe, which left Brest on the 1st of August, 1785, and the calamitous and, till recently, mysterious result of which, so long excited the commiseration and curiosity of Europe. We have also an account of D'Entrecasteur's expedition, in 1791, in search of his lost countrymen; and both narrations are extremely interesting and appropriate. Capt. Dillon then proceeds to his own eventful story. From the year 1809 he had been much engaged in the navigation of the South Seas, and in visiting and residing at several of the innumerable islands with which that vast ocean is studded. He thus acquired a knowledge of the natives, and an insight into their language, which led the way to the remarkable discovery that crowned his later efforts. But one of his earlier adventures among these savages is so painfully characteristic, that we are tempted to pause on the very outset of the work, and present the dreadful relation in the writer's own language (that of sailor's yarn) to our readers.

In 1813 the ship Hunter, Captain Robson, arrived at the *Beetes* (commonly called the *Feejee*) Islands, and the commander joined one of the chiefs, at the place where he had anchored to procure sandal-wood, in an expedition against some other tribe. Capt. R., however, soon after quarrelled with his cannibal allies; and the author tells us—

“Early in September two large canoes from Bow, carrying about two hundred and twenty or two hundred and thirty men, visited the ship, for the purpose of taking home the Europeans and their wives that joined us in May. Captain Robson about that time being sixty miles distant from the ship in the tender, attacked a fleet of Vilear canoes, and took fourteen of them; on which occasion a native of the latter place was shot dead by a small cannon-shot. On the ship and cutter rejoining company, the captain proposed to heave the cutter down, to repair some damage she had sustained in her bottom. However, he deemed

it prudent, before doing so, to endeavour to possess himself of the remainder of the Vilear canoes, to prevent, as he said, their attacking the people while employed about the cutter, as it would be necessary to haul her on shore at high water. On the morning of the 6th of September the Europeans belonging to the ship were all armed with muskets, also those Europeans from Bow, and placed under the direction of Mr. Norman, the first officer. We landed at a place called the Black Rock, a little way to the eastward of the river: the two canoes shortly afterwards landed at the same place. We were joined by the Bow chiefs and a hundred of their men. The canoes and boats then put off into deep water, which precaution was used to prevent their getting a-ground by the tide ebbing. On landing, the Europeans began to disperse into straggling parties of two, three, and four in a group. I begged of Mr. Norman, our commander, to cause them to keep close together, in case of a sudden attack from the islanders; but no attention was paid to my remonstrance. We proceeded by a narrow path over a small level plain without interruption until we arrived at the foot of a hill, which we ascended, and soon gained the level or table-land on its top. There a few natives shewed themselves, and by shouts and gestures tried to irritate us. Mr. Norman turned to the right along a narrow path, which led through a thicket to some native houses: I followed him with seven other Europeans and the two Bow chiefs, with one of their men. Here a few natives tried to dispute our passage: they were fired at—one shot dead, and the others retreated. Mr. Norman then directed the chief's house, with some others, to be set on fire. The order was immediately complied with, and all were in flames in a few seconds. A few minutes after, we heard dreadful yells and shoutings of the savages proceeding from the road by which we had ascended to the table-land. The Bow chiefs understood from the yells that some of their men as well as Europeans were killed by the Vilear people, who lay concealed in ambush until they got us on the table-land, where they attacked our straggling parties, who having discharged their muskets, were killed before they had time to reload. Others, I afterwards understood, on seeing themselves nearly surrounded by the savages, threw down their muskets and ran towards the boat: only two of whom escaped. In Mr. Norman's party there were ten musket-men, with the two Bow chiefs and one of their followers. We determined to keep close together and fight our way to the boats. We immediately got out of the thicket on to the table-land, where there were not more than three of the islanders, who shouted and called out to us that several of our men were killed, as also a number of the Bow men, and that we should immediately share a similar fate. On reaching the brink of the path by which we were to descend to the plain, we found Terence Dun lying dead with his brains beaten out by a native

club, and the whole plain between us and the boats covered with thousands of infuriated savages, all armed. Before descending to the plain, a young man named John Graham separated from us, and ran into a thicket of bushes on the left-hand side of the road, where he was quickly pursued by the three savages above mentioned, who despatched him. The remainder of us proceeded down the precipice. On getting to the bottom the savages prepared to receive us; they stood in thousands on each side of the path, brandishing their weapons, with their faces and bodies besmeared over with the blood of our slaughtered companions. At this moment a native who came down the precipice after us, threw a lance at Mr. Norman, which entered his back and passed out of his breast: he ran a few yards and fell down apparently dead. I fired at this native and reloaded my musket as soon as possible,—when on turning round I found my companions had all run off by different routes. Taking advantage of the absence of the natives, who had all quitted the path and pursued our unfortunate flying men, I dashed along with all the speed that was possible; but had not proceeded more than a few yards when I came on the dead body of William Parker, who was prostrated across the path with his musket by him, which I took up and retreated with. About this time the natives observed me and gave chase. One of them came up so close to me that I was obliged to throw Parker's musket away, as also a pistol which I had in my belt. In a moment after this I reached the foot of a small steep rock that stood on the plain. Finding it impossible to get to the boat through the crowds of natives that intercepted the pathway, I called out to my companions (some of whom were on my right), ‘take the hill! take the hill!’ We then got to the top of it, where I joined the following persons: Charles Savage, Luis a Chinaman, and Martin Bushart, with Thomas Dafny and William Wilson. The three former men resided at Bow, and joined us at this island for the purpose before mentioned; the two latter were seamen belonging to the ship. Mic Macabe, with Joseph Atkinson and the two Bow chiefs, were killed: those men had joined us also here. Dafny fired his musket on the plain, and then broke it off at the butt in defending himself. He was wounded in several parts of the body, and he had four arrows stuck in his back: the point of a spear had pierced his shoulder, having entered from behind and came out in the fore part under the collar-bone. It fortunately happened that the rock or hill to which we escaped was so steep that few persons could ascend it at a time; and it was too elevated for the natives to annoy us much with their spears or slings. They, however, shot several arrows at us, which were impeded by a strong gale of wind that blew them off their intended course. Our chief officer having fallen, I now, as next in rank, took command of the party, and stationed them in the best

way I could to defend our post. I did not allow more than one or two muskets to be fired at a time, and kept the wounded man loading for us. Several of the natives ascended the hill to within a few yards, and were shot by us in self defence as fast as they approached. After some of them had been killed in this manner the rest kept off. Having but little ammunition left, we were as sparing of it as possible; besides which, we did not wish to irritate the natives more than they already were by firing, except when driven to it by necessity. From our elevated situation we had a clear view of the landing-place, the boats at anchor waiting our return, the two Bow canoes, and the ship. This we had but little prospect of ever again rejoining, though I had some hopes that Captain Robson would make an effort to rescue us, by arming himself, six Indian soldiers that were on board, two or three Europeans, and the Bow people in the canoes. These hopes soon vanished, when I saw the Bow canoes set sail and steer towards their island without passing alongside the ship."

The miserable remnant stationed on the rock beheld the cannibals preparing their ovens to bake those they had killed; and this occupation having in some degree abated their fury, Captain Dillon reminded them that eight of their people were prisoners in the ship, and that unless he and his companions were safely conveyed on board, they would certainly be put to death. The high priest's brother being one of the captives, this representation induced him to consent to a man being sent to the ship for their release.

"This man proceeded as directed, and I did not lose sight of him from the time he left us until he got on the ship's deck. A cessation of arms took place in the mean time, which might have continued unbroken, had it not been for the imprudence of Charles Savage, who put a greater temptation in the way of the natives than they could withstand. During this interval, several native chiefs ascended the hill, and came within a few paces of us, with protestations of friendship, and proffered us security if we would go down among them. To these promises I would not accede, nor allow any of my men to do so, till Charles Savage, who had resided on the islands for more than five years, and spoke the native dialect fluently, begged of me to permit him to go down among the natives with the chiefs to whom we were speaking, as he had no doubt their promises would be kept, and that, if I allowed him to go, he would certainly procure a peace, and enable us all to return safe to the ship. Overcome by his importunities, I at last gave my consent, but reminded him that I did not wish him to do so, and that he must leave his musket and ammunition with me. This he did, and proceeded about two hundred yards from the foot of the rock to where Bonasar was seated, surrounded by chiefs, who were happy to receive him, their secret determination being to kill and eat him. They conversed with him, however, for some time, and then called out to me, in the native dialect, 'Come down, Peter; we will not hurt you: you see we do not hurt Charley!' I replied that I would not go down until the prisoners landed. During this discussion the Chinaman, Luis, stole down the opposite side of the hill unknown to me, with his arms, for the purpose of placing himself under the protection of a chief with whom he was intimately acquainted, and to whom he had rendered important service in former wars. The islanders, finding they could not prevail on me to place

myself in their power, set up a *screech* that rent the air: at that moment Charles Savage was seized by the legs, and held in that state by six men, with his head placed in a well of fresh water until he was suffocated; whilst at the same instant a powerful savage got behind the Chinaman, and with his huge club knocked the upper part of his skull to pieces. These wretched men were scarcely lifeless, when they were cut up and put into ovens ready prepared for the purpose. We, the three defenders of the hill, were then furiously attacked on all sides by the cannibals, whom our muskets, however, kept in great dread, though the chiefs stimulated their men to ascend and bring us down, promising to confer the greatest honours on the man who should kill me, and frequently inquired of their people if they were afraid of three white men, when they had killed several that day. Thus encouraged, they pressed close on us. Having four muskets between three of us, two always remained loaded; for Wilson being a bad shot, we kept him loading the muskets, while Martin Bushart and I fired them off. Bushart had been a rifleman in his own country, and was an excellent marksman. He shot twenty-seven of the cannibals with twenty-eight discharges, only missing once; I also killed and wounded a few of them in self-defence. Finding they could not conquer us without great sacrifice on their part, they kept off and vowed vengeance. * * * These people sometimes, but not very often, torture their prisoners in the following manner. They skin the soles of the feet and then torment their victims with firebrands, so as to make them jump about in that wretched state. At other times they cut off the prisoner's eyelids and turn his face to the sun, at which he is obliged to look with his bare eyes: this is said to be a dreadful punishment. From the fingers of others they pull off the nails. By all accounts, however, these punishments are very rare, and only inflicted on persons who have given the greatest provocation; such as we had done this day, by shooting so many men in our own defence. Having no more than sixteen or seventeen cartridges left, we determined, as soon as it was dark, to place the muzzles of our muskets to our hearts, with the butts on the ground, and discharge them into our breasts, thus to avoid the danger of falling alive into the hands of these cannibal monsters. At this moment the boat put off from the ship and soon got close to the landing-place, where we counted the eight prisoners landing from her. I could not imagine how the captain could have acted in this strange way, as the only hope presented of our lives being spared was by allowing a part of the prisoners to land, who would, of course, intercede with their friends on shore to save us, that we might in return protect their countrymen when we returned to the ship. But this precaution not having been attended to, all hope seemed now fled, and the only means of relief left consisted in the dreadful determination of destroying our own lives in the mode already mentioned. Shortly after the eight prisoners landed, they were conveyed unarmed up the rock to me, preceded by the priest, who informed me that Captain Robson had released the eight men, and sent a chest of cutlery, ironmongery, &c. on shore for the chiefs, with orders that we were to deliver our muskets to them, and that he would see us safe to the boat. I replied, that as long as I lived I would not part with my musket, which was my own property, as I was certain they would slaughter me and my companions, as they had done Charles Savage and Luis. The priest then

turned to Martin Bushart, and harangued him on the policy of our complying. At this moment the thought entered my head of making the priest a prisoner, and either to destroy him or regain my liberty. I tied Charles Savage's musket with my neck-handkerchief to the belt of my cartridge-box, and presenting my own musket to the priest's head, told him that I would shoot him dead if he attempted to run away, or if any of his countrymen offered to molest me or my companions. I then directed him to proceed before me to the boat, threatening him with instant death in case of non-compliance. The priest proceeded as directed, and as we passed along through the multitude, he exhorted them to sit down, and upon no account to molest Peter or his countrymen, because if they attempted to hurt us he would be shot; and they of course must be aware they would consequently incur the wrath of the gods in the clouds, who would be angry at their disobedience of the divine orders, and cause the sea to rise and swallow up the island, with all its inhabitants. The multitude treated their priest's injunctions with profound respect, and sat down on the grass. The Nambety (which is the term for priest) proceeded as directed, towards the boats, with the muzzles of Martin Bushart's and Wilson's muskets at each of his ears, while the muzzle of mine was placed between his shoulders. Finding that night was approaching, and anxious to prolong life, I had recourse to this dreadful expedient, being aware of the influence and sway which the priests in all barbarous nations have over their votaries. On getting to the boats, Nambety made a sudden stop. I ordered him to proceed. This he refused doing in the most positive manner, declaring that he would go no further, and that I might shoot him if I liked. I threatened to do so, and asked him why he would not go to the water's edge? He replied, 'You want to take me on board alive, and put me to the torture.' There being no time to spare, I told him to stand still, and turned my face to him with my musket presented, threatening to shoot him if he attempted to move until I got into the boat. We then walked backwards to the water-side, and up to our breasts in water, where we joined the boat, and had no sooner got into her than the islanders came down, and saluted us with a shower of arrows, and stones from slings. Being thus once more out of danger, we returned thanks to Divine Providence for our escape, and proceeded towards the ship, which we reached just as the sun was setting."

Monsieur Chabert never had such an escape from an oven and baking. We shall return to the fortunate author next week.

Private Memoirs of the Court of Louis XVIII.
By a Lady. 2 vols. 8vo. London, 1838.
Colburn and Bentley.

Two entertaining volumes, and thoroughly French: anecdotes, as the keeper of the menagerie said of his animals, "of all kinds"—sentiment à des grandes phrases—and a great mass of curious and strange matter. These Memoirs are supposed to be written by Mad. de Caylus, the fair favourite of Louis XVIII. Of their authenticity it would be difficult to speak: we dare say they contain a sufficient degree of truth to be the necessary source *puissant*: at all events, they are very readable, and present a panorama of Paris as animated as it is amusing. And for any one who has a morbid vein, there is food for most painful and serious meditation: it is a frightful picture of society—without principle—without that good

feeling which, like a delicate plant, requires for its very existence a clear and wholesome atmosphere—without that great check of the many, opinion; for universal example is universal encouragement. We can scarcely imagine manners more corrupt, under the superficial veil of affected feeling and refined expression; or baser treachery, under the names of necessity or patriotism.—But to revert to the pleasanter part of our task. We cannot attempt much order in our extracts. The fair authoress, in the first instance, sets forth the full license of memoir-writing, as far as regards change of time and place: we cannot do better than imitate her example:—in extracts, as in culpe, variety is the great charm. The following tale of her first love is characteristic of the whole style: we should fill up the blank name by observing, that Labedoyère is the hero.

“One Sunday, looking about me as usual, I suddenly perceived, at the distance of twenty paces, a young man, who seemed to have been spying at me with his glass for some time. He was well shaped, his features regular, his face pale, his eyes!—his eyes, which were fixed upon me, were charming—and above all, he had the handsomest mustaches in the world. Mustaches! then he was a soldier. My father had been a soldier; my brother was a soldier; it was my duty not to hate soldiers. Besides, we attach to that profession ideas of courage and glory which singularly delighted my heart at sixteen. The following Sunday, the same young man was in the same place, looking at me as before. He had come thither on my account—of that there could be no doubt: I had no doubt of it, but still I wished to be sure. I would have given any thing in the world to hear him say to me, ‘It was for your sake that I came hither. This confession will make all the noble ladies cry out aloud; they will protest that never did a girl of good family feel her heart throb before marriage. For my part, I could only answer them by proving, documents in hand, that my pedigree is regular. But, alas! I do not consider myself as an exception; and to confirm what I advance, I might certainly relate the first-love affairs of this or the other person: but no, that would be wrong—I must not imitate the Countess de Genlis, who, in her Memoirs, has confessed every body’s sins but her own. Be this as it may, the handsome young man of St. Thomas Aquinas continued faithful to the church and to me. He even followed me, and I turned my head, blushing at the same time, to look at him. It was not long before I began to see him every where—even where he was not. I thought of him when I was with my father—when I was alone in my room I thought of him—at night, instead of sleeping, I thought of him; and if I closed my eyes, my waking thoughts obtruded themselves upon my slumbers. I saw him, at all times and in all places, at my side, in the dress in which I had first beheld him—it was a green frock coat; I shall not forget it as long as I live. One morning, at breakfast, my father said to me, ‘I have just hired a new servant. I think he will suit: at any rate, I shall give him a trial.’ What did I care about a servant! alas! little did I know how deeply this one was to interest me!”

“We were seated at table, and had begun dinner. I happened to cast my eye on the new servant whom my father had that morning engaged. He was my *incognito* of the church! but no: he had no mustaches. A few moments afterwards, I looked at him again to see whether I was not mistaken. It was he. A ser-

vant! I in love with a servant! The thought was enough to make one die of shame a hundred times over. I could hold out no longer—my senses forsook me, and I fainted. * * * Every body had retired, and I was just about to lie down, when I found under my pillow a paper,—a letter. Who could write me a letter? Who could have put it there? I opened, I read it: I trembled; it was a declaration of love. Never was passion expressed with more delicacy and energy. It was signed Charles de La..... The name is known, too well known, to the misfortune of him who owns it: it then belonged to a very amiable hare-brained young man.”

We proceed at once to the *dénouement*:—

“There was at this time in France a woman of superior genius, destined to confer glory on her age and country. This woman was profound as Montesquieu, witty as Voltaire, impassioned as Jean Jacques Rousseau; but, continuing to be a woman in heart, she thought there was nothing derogatory in being subject herself to the foibles of her sex, and having compassion on those of others. Her versatile imagination could turn to every subject—was adequate to every thing. She discussed with equal enthusiasm political questions and the sentiments of private life—she would have given advice to power just as well as to mere friendship. If you ask for a portrait of this extraordinary woman, I should say that her beauty, like her genius, was quite masculine. She was of majestic stature, and had a wide chest, the movements of which had also their eloquence when agitated by the demon of inspiration. Her physiognomy was rather noble than delicate. I know not why she is represented holding a nosegay in her hand; I would rather see her with a lyre, like her own Corinna.”

“My father had gone out. I was alone in the drawing-room; but Charles was not far off, and I knew that he was coming back. Madame de Staël was announced. At that name I was embarrassed; I rose and made a very awkward courtesy, which was returned with mingled grace and dignity. We sat down. All at once Charles returned, and not seeing Madame de Staël, he approached me with the familiarity of a brother: but Madame de Staël, though near-sighted, recognised him, and exclaimed, ‘You here! and in this livery! What comedy are you acting?’ Had hell opened under my feet I should not have been more horror-struck than by this terrible question. A shriek escaped me, and this was quite sufficient to reveal all to Madame de Staël. Charles, having no plausible excuse at hand, observed a profound silence; and gravely bowing, retired, evidently confused and humbled—he who has since braved death with such heroic courage. As for me, left alone with Madame de Staël, I could not help crying like a child. It has been said that Madame de Staël was fond of preaching sermons: that day she had fair scope, and seemed to take pleasure in making a long maternal remonstrance. My inexperience and embarrassment naturally gave her this advantage over me: she availed herself of it with her usual ability, and did not fail also to claim the rights of her friendship for Charles, whom she wished, she said, to save from the commission of a crime, if it was not too late. I listened to her harangue with the docility of a little child—all that I would fain have asked of her was secrecy: this she spontaneously promised me, and then passed to the subject of her visit, as if nothing had happened; and she retired, casting on me that look of protection

which the most superior woman loves to assume when she has been giving good advice. I was annihilated: and such was my shame that I verily believe if Charles had then met my sight, I should have been afraid of him—I durst not even look at myself in the mirror for several days. A real illness came to my relief, and this time afforded Dr. Alibert occasion to exercise his art beneficially. But what astonished myself was that the physical malady so completely extinguished my secret sentiments that I forgot my love in my fever, and when I recovered my health, I seemed as if awaking from a dream.”

Truly a most rational sort of fever!—We have not room for details: indeed, in the romance of history, of the time when Napoleon first abdicated, one little trait of M. de Pradt tells the act of thousands.

“‘*Parbleu*, I was every where. Who was the first to shout, *Vive le Roi*? And who distributed the white cockades?’ With these words M. de Pradt put his hands into his pocket, for the purpose of producing the evidences necessary to convince me, and drew forth a tricoloured cockade. At the moment when he was going to hand it to me, he perceived his mistake, and hastily returned his proofs to his pocket,—but not before I had had time to see them. ‘That is a little oversight of your eminence’s,’ said I; ‘provided that this morning you have not mistaken the pocket.’”

“My father told me of a saying of a Noailles, that was charming for its *naïveté*. In the heat of the quarrel between Diderot and Jean Jacques Rousseau, which was the topic of general conversation in Paris, M. de Noailles, angry at hearing nothing else talked of wherever he went, exclaimed—‘Indeed this is unaccountable: here are two go-barefoots, two tattereddemalions, who lodge in a garret, and cannot get a dinner, making a noise sufficient to stun people. If I were king, two good *lettres de cachet* should rid me of this scandal.’”

“I recollect one anecdote of Fouché which was of use to me for appreciating the character of that man of whom there are such different opinions. M. Charles Nodier had been his secretary in Illyria, and he related to us that being appointed to superintend the government newspaper at Trieste, he one day received a letter from the governor, then at Görnitz, in which Fouché reproached him with his attachment to the Bourbons, and his treacherous connexion with the enemies of the empire. ‘Give up,’ he continued, ‘the management of the *Télégraphe* to the Abbé C., the only person worthy of my confidence, which you have lost for ever.’ M. Nodier was thunderstruck, and immediately set out for Görnitz to justify himself. The Duke of Otranto gave him the most cordial welcome:—‘Has Monseigneur then ascertained my innocence?’ inquired the confused secretary; ‘your letter was rather severe.’ ‘Yes,’ replied the duke; ‘but you must confess that it was an excellent passport for you in case you had not set out immediately; for, two hours after your departure the English were to enter Trieste.’”

The Duke of Berry.—“It was not long before this prince fell into faults of that kind which M. de Chateaubriand so ingeniously excuses while invoking the name of the charming Gabrielle. A Parisian bayadère inspired him with a passion which lasted till his death. This divinity of the opera knew how to play perfectly well the new part to which she was called by the preference of the prince. I shall never forget that, in 1814, at a performance of

Castor and Pollux, at which the whole dynasty were present, the public having expressed its enthusiasm by applause, Mademoiselle Virginie, who saw the royal family bow in token of gratitude, also rose in her box and made a low courtesy to the pit. Her waist had then been on the increase for some months. Luckily, this inadvertence was not observed; but several of my friends and myself, who were so placed as to enjoy this scene, not announced in the bills, laughed heartily at her pretension to share the homage paid to *legitimacy*."

The whole account of the eating, drinking, and sleeping etiquettes of the French court is very amusing. M. de Brézé is a good picture of the *ancien régime* prejudices.

"M. de Brézé firmly believed that the grandeur of the monarchy and the majesty of the crown depended on this or that salute, on this or the other ceremony, the very name of which escapes my memory. I recollect that in the month of March 1815, a general, whom the king had sent for, arrived in haste to the palace in a coloured cravat. At this sight the grand-master of the ceremonies turned pale and shuddered. He first addressed the general with all the forms of the most exquisite politeness, requesting him to return home to substitute a cravat of the prescribed hue for the obnoxious one. The general replied that he would willingly do it, but that he had no time, as the king desired to see him immediately. M. de Dreux-Brézé then took off the cravat of one of the guards, and would have forced the general to put it on. At this moment the Duc de la Châtre appeared; he came to fetch the general: M. de Brézé ran up to him and said—'Monsieur le Duc, I hope you will not permit this gentleman to appear before the king in a coloured cravat: never was such a costume admitted at the Tuilleries; it is absolutely contrary to all established custom.' The Duc de la Châtre, a sensible man, could scarcely refrain from laughter: 'My dear Brézé,' replied he, 'the king's will is superior to all rules of etiquette, since etiquette was invented for him.' 'Ah, madam!' said the grand-master of the ceremonies, turning towards me with a look of sincere and profound grief,—'ah, madam; that is the way to produce a revolution!' Accordingly, M. de Brézé has ever since reckoned the general's coloured cravat among the fatal causes of the 20th of March."

"Poor M. de Ferrand had the honour to be pronounced the emblem of the monarchy when, having lost the use of his limbs, he attended the chamber of peers, the academy, &c. supported by two servants. M. de Talleyrand meeting him in this way on the staircase of the Luxembourg said, with that air of sympathy which the lame may be expected to feel for the paralytic: 'Our poor colleague is the image of the government. He thinks he is walking, and all the while he is carried.'"

"I informed the king that Napoleon had caused to be published in the Paris papers that the Duke of Angoulême had pledged himself, by the capitulation he had signed, to procure for Bonaparte the restitution of the crown diamonds, which diamonds Bonaparte claimed as his, since he had re-ascended the throne. 'That,' said Louis XVIII., 'reminds me of a droll story which I once read in the English papers. A thief broke into the dressing-room of a lady of rank, and stole her jewels, which were of great value. Recollecting that he had accidentally left a ruby necklace on the chimney-piece, he wrote to the lady, requesting her to deposit it in a certain place,

where he might get it, because he conceived it to belong to him as much as the other valuables he had stolen. I presume,' added the king, 'that the lady did not accede to the thief's request, nor do I intend to shew any complaisance to my robber.'"

We cannot do better than close our review with the following characteristic fragment.

"Grief renders the heart susceptible of the tenderest affections: men never think women so interesting as when they are in tears. This is perhaps because they know that in our weakness we love to be consoled. How few young widows remain long faithful to their sorrow! For my own part I must confess, that when I returned to court after the death of my husband, my grief seemed destined to be eternal: yet it yielded to a return of that *besoin d'aimer*, which had well nigh ruined me in my giddy youth,—which had displeased a husband, from whom politics separated me,—and which disposed of my existence after the second restoration."

"Our friendship was now for life and death; and, in spite of some occasional clouds, I enjoyed the increasing favour of Louis XVIII. to the end of his days."

Talleyrand, Fouché, and Chateaubriand, are sketched with great vivacity; and, altogether, if we except the entertaining memoirs of Josephine, we know none of the French obnoxious class more amusing than these. There is not a female sentiment which we could witness without disgust in an English woman, and some of the stories are profligate beyond the measure of public license. Perhaps they do picture the worthless of a vain and contemptible class in the upper ranks of society; but, with all the vices of the other orders, we trust they will never imitate these wretched dabblers in heartless prostitution. For decency's sake, two or three of the anecdotes ought to have been omitted; but the whole tendency of such descriptions is to demoralise."

The Book Rarities in the University of Cambridge. Illustrated by Original Letters, and Notes, Biographical, Literary, and Antiquarian. By the Rev. C. H. Hartshorne, M.A. 8vo. pp. 559. London. Longman and Co. To this generally very curious volume, and one peculiarly interesting to all the children

who own Cambridge as their Alma Mater, is prefixed a quotation from our dear friend Gil Blas; which, as our withers are unwrung, we copy for its truth, justice, and applicability:—"Je remarquai," says that shrewd observer, Le Sage, "que tout le monde se mêlait d'en juger. L'un se déclarait pour, l'autre contre. A-t-on jamais vu un ouvrage mieux écrit? disait-on à ma droite. Le pitoyable style! s'écriait-on à ma gauche. En vérité, s'il y a bien de mauvais auteurs, il faut convenir qu'il y a encore plus de mauvais critiques. Et, quand je pense au dégoût que les poètes dramatiques ont à essayer, je m'étonne qu'il y en ait d'assez hardis pour braver l'ignorance de la multitude, et la censure dangereuse des demi-savans qui corrompent quelquefois le jugement du public." From such implied censure we venture to appeal to our readers. We prefer facts to opinions, and illustrations (so connected as to enable all to form their own judgments) to the dogmatism of the critical chair; and when circumstances do not admit of our following either of these courses, the *Literary Gazette* plainly and honestly states the case, ever leaning to the side of kindness and encouragement; but without bias, fear, or favour."

With this profession of faith and practice we proceed to handle Mr. Hartshorne's work, which, in spite of his touch at our tribe, we have examined to our great satisfaction. It is, indeed, full of valuable and entertaining matter, and must be very acceptable to every lover of literature. Any account of book rarities is interesting; and Cambridge has furnished the author with a multitude of anecdotes, from which we shall make a brief selection, as the best mode of reviewing a publication of so miscellaneous a kind. The embellishments are also in good taste, and numerous. Ancient initial letters—copies of illuminated borders—scarce portraits—views of public buildings—facsimiles of bindings and arabesques—remarkable head and tail-pieces, &c. &c. are very fitting ornaments to a book of this quaint and antique description. But of all these, the subjoined will undoubtedly excite the greatest share of curiosity. Is there indeed nothing new under the sun? Is even Phrenology an old joke, entertained, forgotten, and revived in our day? It would seem so; for this head is from a Treatise on Craniology several centuries ago.

Here we have the skull mapped out, though not into so many little provinces as by modern phrenologists, into "Estimativeness," "Cogitativeness," "Imaginativeness," and all the *finenesses* of the superlative science. We can now, with this proof before us, also well believe that phrenology had been long familiar to the philosophers of China!

But we have done enough with this singular discovery, and shall now make our extracts.

"In the progress made by Queen Elizabeth and James when they were at Audley End, they were generally presented with gloves, of which there appears to have been a famous manufactory at that time in Cambridge. Let us hear what old Stokys the esquire bedell says upon the matter, when Queen Elizabeth was there in 1578. 'The vice-chancellor making his three ordynarie curtesies, and then kneeling at her majesties feete, presented unto hir a Newe Testament in Greeke, of Robertus Stephanus, his first printing in folio, bound in redd velvett, and lymmed with gould, the armes of England sett upon eche side of the booke vearay faire, and on the thirde leafe of the booke, being faire and cleane paper, was also sett and painted in colours the armes of the universitie with theise writings following. [Then come the verses.] Also with the booke the said v. chancellor presented a paire of gloves, perfumed and garnished with imbroderie and goldsmithes wourke, pret. lxs. In taking the booke and the gloves it fortuned that the paper, in the which the gloves were folded, to open, and hir majesties behoulding the beutie of the saide gloves, as in great admiration, and in token of hir thankful accepting the same, held up one of hir hands.' The University then gave Lord Burleigh, the Earl of Leicester, and the Earl of Sussex, a pair; the two former worth twenty shillings a pair; the latter worth four shillings and two-pence, of which he made such accompte, that he willed the v. chancellor returning to Cambridge to thanke the Universitie, and assure them of his good will, saying, I am ready to pleasure the Universitie to my power; I am a Mr. of Arte of that University, and have been twice at Oxford, and there that degree hath been twice offered mee, but I have refused the same. For I meane not to have two strings to mie boe.'—*Cole's MSS.* vol. xlv. p. 441, 2. Perhaps the Cambridge gloves that were so famous might be those sent by Queen Henrietta Maria to her sister-in-law, Anne of Austria, Queen of France, a box of which was found in the Abbey of Val de Grace, at Paris, in the queen's apartment there, which Cardinal Richelieu caused to be searched, in hopes of finding something wherewith to accuse the Queen of holding a correspondence with the King of Spain her brother."

In an edition of minor poems by Chaucer (printed by Caxton) the following occur:—

"The compleint of Chaucer vnto his empty purse, which begins thus:—

'To you my purs, and to none other wight
Complayne I, for ye be my lady dere:
I am sory now that ye be light,
For certes ye now make me heuy there;
We were as lief be leyd vpon a bere:
For whiche, vnto your mercy thus I crye
Be heuy agayn, or ellis mote I dye.'

This ends on the recto of the following leaf thus:

'ET SIC EST FINIS.'

Somewhat of the manners of the age may be gathered from the annexed extracts of a poem. "Stans Puer ad Mensam. Enprynted at London in Fletestrete at the sygne of the Sonne by me Wynkyn de Worde. Without Date.

Quarto. A reprint of Caxton's *Stans puer ad Mensam*. It is, properly speaking, a treatise on good manners, as the extracts below will shew. The Latin edition of 1524 is printed, with some variations, in Ruddiman's Rudiments; and either one or the other may have furnished hints to Lord Chesterfield, quite as useful as those which are to be found in his manual of politeness.

"Grennyng and mowes at the table eschewe
Crye not to lowde kepe honestly silence
Tenbose thy jowes with mete it is not dewe
With ful mouth speke not lest thou do offence
Drinke not bridled for haste ne for negligens
Kepe cleane thy lippes fro fatte of flesh or fish
Wipe fair thy spone leue it not in thy dishe.
And where so be thou dyne or soupe
Of gentylnes take salt with thy knyf
And beware thou blowe not in ye coupe &c. &c.
In welthe beware of woo what so the happies
And bere the euen for drede of after clappis.
Knowe er thou knytte and thou maist slake
Yf thou knyrt er thou knowe that it is to late."

From the *Bayle and Snare of Fortune*, another very scarce old book, we transcribe a wise saw.

"Get thy goods truly, spende them precisely:
Set thy goods duly, lende thou them wisely.
True getting, eyse spending,
Due setting, wyse lending,
Hauve ye lytle or muche, kepeth a man full rutche,
Vntyll his endyng. Finis."

Speaking of the first editions of works, Mr. H. says: "One John Ellis of Waddesdon in Buckinghamshire, father of Phillip Ellis, a popish bishop in the reign of James the Second, wrote a smart epigram upon the first edition of books, and upon this edition in particular: as it has not yet been printed, it may be worth inserting here.

Books unto virgins I compare,
Who at the first but slender are,
But yet more uncorrupt by far
Than when they grow much bulkier.
The water's sovereign at the spring,
The spreading rivers want the thing."

In King's Library "there is a remarkable chart executed at Rome in the year 1467; and another curious though later one, executed at Marseilles, in which Newfoundland is designated *Nova Terra Baccalaos*: the fish coming from thence are still called, in the Levant, Baccalau."

The following respecting Almanacs is curious, and the more so, as these publications have very recently undergone a reformation.

"Regiomontanus appears to have been the first in Europe who reduced almanacs into their present form and method, gave the characters of each year and month, foretold the eclipses and other phases, and calculated the motions of the planets. His first almanac was published in 1474. Before his time, the Swedes, Danes, and Norwegians, used for the purpose a wooden stave inscribed with Runic characters, representing the order of the feasts, dominical letters, days of the week, and golden number, with other materials necessary to be known through the year. From the Danes their use was introduced into England, where many still exist, particularly a very fine one in St. John's College Library, Cambridge, engraved, and, probably, minutely described, in Brady's *Clavis Calendaria*. Dr. Plott has given a description of one of those found in Staffordshire, in his natural history of that county. The external figure and matter of these calendars appear to have been various; sometimes they were cut on one or more wooden leaves, bound together after the manner of books; sometimes on the scabbards of swords, or even on daggers; sometimes on tools and implements, as portable steelyards, hammers, &c.; sometimes they were made of brass or horn—of skins of eels, which being drawn over a stick properly inscribed, retained the impressions of it. But

the most usual form was that of walking-staves or sticks, which they carried about with them to church, market, &c. These staves are divided into three regions; the first indicates the signs, the second the days of the week and year, and the third the golden number. The prophetic part of our almanacs was added at the beginning of the eighteenth century, by Partridge, who published his predictions weekly, and printed them as periodical papers."

Here are some specimens of these productions in October 1700.

"Citizens post to their country houses, and leave their 'prentices to comfort their wives. Shoals of country-puts come to town about five, with their pockets well cramm'd; but that cormorant called *equity* will soon clear them. Sunday 27. Taylors curs'd for not bringing the fine cloaths home at the promis'd hour. Great ogling at Covent Garden church and other places, from ten to twelve. A she Quaker holds forth in her stays in Grace-church-street, to the great cramping of the spirit. Ministers preach against sin, but the people still practise it, and are like to do so to the end of the chapter. November 1. Great preparations at the Bear-garden all morning for the noble tryal of skill that is to be played in the afternoon. Seats fill'd and crowded by two; drums beat, dogs yelp, butchers and foot soldiers clatter their sticks; at last the two heroes, in their fine borrow'd holland shirts, mount the stage about three; cut large collops out of one another, to divert the mob, and make work for the surgeon; smocking, swearing, drinking, thrusting, justling, elbowing, sweating, kicking, cuffing, stinking, all the while the company stays. Saturday 2. Hundreds of poor souls confined in that wicked purgatory the fleet, or King's bench, and not like to be prayred out in haste, &c. Sunday 3. Beggars take up their respective posts in Lincoln's-inn-fields, and other places, by seven, that they may be able to praise God in capon and March beer at night. Parish clerks liquor their throats plentifully at eight, and chaunt out Hopkins most melodiously about ten. Sextons, men of great authority most part of the day, whip dogs out of church for being obstreperous. Great thumping and dusting of the cushion at Salter's-hall about eleven. Country fellows staring at the two wooden men at St. Dunstan's from one to two, to see how notably they strike the quarters. The great point of predestination settled in Rusel-court about three; and the people go home as wise as they came thither. A merry farce, called *The Confusion of Babel*, acted at surly *Wat's* coffee-house in the evening, and lasts from five till ten. Great squabbling, buzzing, and prating, from the Baronet's Club, down to the noise footmen below. Terrible swearing in the kitchen for the boys not bringing the vile *Darby* in time. Beef called for at every table, and mistress cook most mightily importuned for a carrot. Wednesday 30. Tradesmen flock in their morning gowns to the purl houses by seven, to cool their plucks which they had overheated in my lord mayor's service the night before. A mighty bustle in the halls about straggled plates and dishes, and bottles missing. Solicitors and clerks bawling out for pudding at the Spread Eagle about twelve. Air infected with perjury and knavery at Westminster, and so like to continue most part of the next month. The noble and ancient recreation of Round Robin, Hey-Jinks, and chipping the snake, in great request with the merry sailors at Wapping.' The predictions run on in this strain for four or five numbers, and then

assume rather a higher flight of composition, thus :—“ When religion, without interest, is preached up for the Lord’s sake only, and courtiers mind the welfare of the publick, and pay their debts without many importunities, then shall the people of England be all of one opinion; women forsake their pride; tradesmen forbear lying in their shops; and libertines, before thirty, renounce the flesh and the devil: but he that intends to be an eyewitness of these happy revolutions, must be arm’d, and live beyond the age of Methusalem. Shakespears and Ben Jonson’s ghosts will in a little time pay a visit to both play houses; and if their fury be not appeased by a fair promise of a new regulation of their stages, with scorpion rods borrowed from the furies they will whip the *Barnet* mimic and the French tumblers out of both houses, and convince the spectators a good old play is better entertainment for a sensible audience than a modern farce with Bartholomew-fair sauce to it; and that a good moral speech is far more edifying than the braying of an human ass; and the neat contexture of a good plot far more delightful than the Flip-flap or the double Sunnset.”

As we shall give another paper to this storehouse of bibliomaniac lore, we shall conclude, for the present, with this quotation and our hearty commendation.

Dr. Arnott’s Elements of Physics. Vol. II.
(Second Notice.)

WE owe it to this able volume to exemplify it by a few more extracts than we could admit into our first notice; and we select Dr. Arnott’s exposition of the *influence of heat on chemical combinations*.

“ By observations made and recorded through bygone ages, man has now come to know that the substances constituting the world around him, although appearing to differ in their nature almost to infinity, are yet all made up of a few simple elements variously combined; and he has discovered that the peculiar relations of these elements to heat,—as their being unequally expanded by it, and their undergoing fusion and vaporisation at different temperatures,—furnish him with ready means of separating, combining, and new-modifying them to serve to him most useful purposes. Where the primitive savage, looking around on rocks and soils, saw in their diversified aspect almost as little meaning as did the inferior animals which participated with him the shelter of the wood or cave,—his son, with penetration sharpened by science, descends at once the treasures of the mine, and aided by heat, whose wonderful energies he has learned to control, pursues through all the Protean disguises of ores, and salts, and solutions, each of the wished-for substances, until he secures it apart. For instance, in what to his forefathers for thousands of years appeared but a red dross, he knows that there lies concealed the precious iron—king of metals! and soon forcing this in his ardent furnace to assume its metallic form, with implements made of it he afterwards moulds all other bodies to his will: the trees from the forest and the rocks from the quarry, in obedience to these, come to be fashioned by him as if they were of soft clay, and at his command rise into the magnificent structures of palaces and ships, with which the earth is now beautified, and the ocean so thickly covered. The minute detail of the relations to heat of particular substances forms a great part of the department of science called *chemistry* (a name taken from

an Arabic word signifying *fire*); but a general review of the subject belongs to this work. The most common ores of metals are combinations of them with oxygen, carbonic acid, or sulphur, substances all of which are volatilised at much lower temperatures than the metals. Now simple roasting, as it is called, or strongly heating the ores, suffices often to drive away great part of these adjuncts; and where additional assistance is required, it is obtained by mixing with the ore something which, when heated, attracts the substance to be expelled more strongly than the metal does. Charcoal, for instance, heated with an oxide, takes the oxygen, and flying off with it as carbonic acid, leaves at the bottom of the furnace or crucible the vivified metal. Mercury mixed with the dross of a mine dissolves any particles of gold or of silver existing in it, and the ingredients of the solution may afterwards be obtained separate by mere heating—the mercury passing away as vapour to where it is cooled and again condensed for repeated use, and the more fixed gold or silver remaining pure in its place,—just as in all other distillations, as that of spirit from wine, or of essential oils from water, &c., there is the separation by heat of a more volatile from a less volatile substance. The only difference between what is called drying by heat and distilling, is, that in the one case the substance vaporised being of no use, is allowed to escape or be dissipated in the atmosphere; while in the other, being the precious part, it is caught and condensed into the liquid form. A piece of cold charcoal lies in the air for any length of time without change; but if heated to a certain degree, the mutual cohesion of its particles is so weakened—that is, the particles are so repelled and separated from each other, that their attraction for the oxygen in the air around is allowed to operate, and they combine with that oxygen, so as to produce the phenomenon of combustion. The same is true, under similar circumstances, of almost any dry vegetable or animal substance, and of several of the metals. Nitre, sulphur, and charcoal, while cold, may be mixed together most intimately without any change taking place; but if the mixture, or any part of it, be heated to a certain degree, the whole explodes with extreme violence,—for it is gunpowder. By the change of temperature, and the consequently altered relative attractions of the different substances, a new chemical arrangement of them then takes place with the intense combustion and expansion, which constitute the explosion. Sea-sand and soda may be mixed, and even ground together, as completely as possible; but if they remain cold, they remain also merely an opaque and useless powder: on heating the mixture, however, to diminish the cohesion of the particles of each substance to those of its own kind, so that the mutual attractions of the two substances may come into play, they melt altogether, and unite chemically into the beautiful compound called glass; a product than which art has formed none more admirable—which in domestic use, for instance, is fashioned into the brilliant chandelier and kistree—into the sparkling furniture of the side-board—into the magnificent mirror-plate; and which, extended across our window openings, admits the light while it repels the storm.”

“ Again, as regards dead animal substances, we find that although at a certain, not very elevated, temperature, they undergo that change in the relations of their elements which we call putrefaction, when nearly their whole sub-

stance rises again to form part of the atmosphere, still, at or below the temperature of freezing water, they remain unaltered for any length of time. In the middle of summer, recently caught salmon, or other fish, packed in boxes with ice, is conveyed fresh from the most remote parts of Britain to the capital. In our warmest weather, any meat or game may be long preserved in an ice-house. In Russia, Canada, and other northern countries, on the setting in of the hard frosts, when the inferior animals have difficulty in finding food, the inhabitants kill their winter supply, and store their provender of frozen flesh or fowl, as in other countries men store that which is salted or pickled. But the most striking instance of this kind we can adduce, is the fact, that on the shore of Siberia, in 1801, in a vast block or island of ice, of which the surface was then more melted than in preceding summers, the carcass of an antediluvian elephant was found, perfectly preserved—an elephant differing materially from those now existing on earth, but its skeleton exactly corresponding with the specimens found deep buried in various countries. The creature was soon discovered by the hungry bears of the district, which were seen tearing off its hairy hide, and feeding on its flesh, as fresh almost as if it had lived yesterday, although it must have been of an era long anterior to that of any existing monument on earth, of human art, or even of human being. Long after it fell from the ice to the sandy beach, and when its tusks had been carried away for sale by a Tungusian fisherman, and its flesh had been nearly devoured, a naturalist who visited it found an ear still perfect, and its long mane, and part of its upper lip, and an eye with the pupil yet distinguishable, which had opened on the glories of a former or younger world! About 30 lbs. weight of its hair, which had been trodden into the sand by the bears while eating the carcass, was collected, and is now preserved in different museums of natural curiosities; some, for instance, in the museum of the London College of Surgeons.”

In the following we are enlightened on the subject of the sun as a source of heat.

“ Human art can gather the sunbeams together, and, by the intense heat produced in the focus of their meeting, furnishes another proof that the sun is the great source of heat. A pane of glass in a window, or a small mirror, will reflect the sun’s ray so as to offend an eye receiving it at a distance of miles—as may be observed soon after the rising, or before the setting of the sun, when his ray is nearly horizontal,—and the heat accompanies the ray; for by many such mirrors directed towards one point, a combustible object placed there would be inflamed. Archimedes set fire to the Roman ships by sunbeams returned from many points to one; his godlike genius thus rivalled by natural means the supposed feats of fabled Jupiter with his thunderbolts. Again, when the light of a broad sunbeam is made by a convex glass or lens to converge to one point or focus, the concentrated heat is also there—for a piece of metal held in the focus drops like melting wax: and if the glass be purposely moved, its focus will pierce through the most obdurate substances, as red-hot wire pierces through paper or wood. A hunter on his hill, and travelling hordes on the plains, often conveniently light their fires at the sun himself, by directing his energies through a burning glass. The direct ray of the sun, simply received into a box which is covered with glass to exclude the cold air, and is lined

with charcoal or burned cork to absorb heat, and to prevent the escape of heat once received, will raise a thermometer in the box to the temperature of 230 degrees of Fahrenheit,—a temperature considerably above that of boiling water. And the experiment succeeds in any part of the earth where there is a clear atmosphere, and where the sun attains considerable apparent altitude. We see therefore that a solar oven might in some cases be used. In operating with the apparatus suggested by the author, and described at page 95, for distilling water by the heat of the sun, the vessel intended to absorb the heat, and to act as the still, should be enclosed in a case lined and covered as above described. Reflecting on such facts as now recorded, and on the globular form and the motions of our earth, we have a measure of the differences of climate and of season that should be found upon the earth. It is evident that the part of the globe turned directly to the sun receives his rays as abundantly as if it were a perfect plane, similarly facing him; while on parts which, as viewed from the sun, would be called the sides of the globe, with the increasing obliquity of aspect, an equal breadth or quantity of rays is spread over a larger and a larger surface; and at the very edge the light passes level with the surface, and altogether without touching. The sunny side of many a steep hill in England receives the sun's rays in summer as perpendicularly as the plains about the equator; and such hill-side is not heated like these plains, only because the air over it is colder—just as mountain tops, even at the equator, owing to the rarefied and therefore cold air around them, remain for ever hooded in snow. In England, at the time of the equinoxes, a level plain receives only about half as much of the sun's light and heat as an equal extent of level surface near the equator; and in the short days of winter it receives considerably less than a third of its summer allowance."

The remarks on the temperature of the earth are also very interesting.

"Of one fact there can be no doubt; viz. that the present temperature of the earth is much lower than the temperature in remote past time. The rocks called primitive, as granite and gneiss, constituting the interiors of our great mountain masses and the substrata of our plains, bear evident marks of having been at one period in a molten state, from which they have been solidified by a very gradual cooling; and even the whole mass of the earth at some time must have been so fluid or soft, as, in obedience to gravity, to have assumed its rounded form, and in obedience to the centrifugal force of its whirling, to have bulged out, at its great circumference or equator, the seventeen miles which its equatorial diameter exceeds the polar; the same, by the by, in degrees corresponding to the various speed of rotation, being true of all the other planets belonging to the solar system. Again, while in excavating below the surface of the globe, or in examining its structure as exposed to view by volcanic or other convulsions, men encounter in very many situations a thickness of more than a mile of the wreck and remains of former states of the world—as on digging eighty feet under vineyards near Mount Vesuvius, they encounter the buried cities of Herculaneum and Pompeii—they further discover that the animal and vegetable remains buried, without number, in the present cold climates of the earth, and evidently resting near where the creatures lived, are all of kinds now inhabiting only the warmer

or tropical regions. Lastly, in the operations of mining, the deeper men go, the higher they find the temperature to be, at the rate of a degree for about 200 feet of descent; which fact, as heat tends to equable diffusion, proves both that the central heat of our earth must have had another source than a radiation from the sun of the present intensity; and that the surface of the earth is now radiating away more heat than it receives from the sun. The conclusion then follows, that the temperature of the world is still falling, although perhaps so slowly that a change may not be detected even within centuries. Possibly in very remote antiquity that may have been true which the early Greeks erroneously thought true in their day; viz. that the equator of the earth, by reason of its great heat, was a barrier impassable by man between the northern and southern hemispheres."

After discussing combustion, Dr. Arnott says,—"Good coal, where it abounds, is now for ordinary purposes by much the cheapest kind of fuel; and since within a few years men have learned to obtain from it separately, and to use instead of oil and wax, its illuminating gas, viz. its hydrogen, holding in solution a little carbon, it has become doubly precious to them. A person reflecting that heat is the magic power which vivifies nature, and that coal is what best gives heat for the endless purposes of human society, cannot without admiration think of the rich stores of coal which exist treasured up in the bowels of the earth for man's use; and Britain, in this respect, is singularly favoured. Her coal mines are in effect mines of labour or power vastly more precious than the gold and silver mines of Peru,—for they may be said to produce abundantly every thing which labour and ingenuity can produce, and they have essentially contributed to make her mistress of the industry and commerce of the earth. Britain has become to the civilised world around, nearly what an ordinary town is to the rural district in which it stands; and of this vast and glorious city the mines in question are the coal-cellars, stored at the present rate of consumption for about 1000 years; a supply which, as coming improvements in the arts of life will naturally bring economy of fuel, or substitution of other means to effect similar purposes, may be regarded as exhaustless."

We purpose, if possible, a further continuation of our extracts from this excellent work; but should we be prevented from executing our design, we trust we have done enough to shew that it is a sequel worthy of as great success as the first volume, for which the public are so much indebted to the author's pen.

Exemplars of Tudor Architecture, &c. By T. F. Hunt, Esq. London, 1829. Longman and Co.

[Second notice.]

WE have already spoken of the general merits of Mr. Hunt's curious work: some particular notice should, however, be taken of his fifth section, on Furniture; a subject on which so little has been hitherto done, and that little so indifferently. We cannot follow the author through the numerous articles *seriatim*; but must condense his researches with our general remarks on the movables and accommodations, such as they were, which the old mansions contained. Mr. Hunt tells us that, "anterior to the Tudors, household furniture was in general of a rude, substantial character—the tables formed of boards on trestles; the seats of many oak branches or stools, and the floors

strewn with rushes." It is certainly rare to find any furniture possessing ornament earlier than the Tudor times; they were mere conveniences, or rather articles of sheer necessity. Yet even still later, we read, that in the Great Chamber, the expected seat of the greatest display, Sir John Haryngton complains "of great plank forms, that two yeomen can scant remove out of their places, and waynsot stools, so hard, that since great breeches were layd asyde, men can skant indewr to sitt on." These, with some pieces of tapestry, absolutely necessary to cover the ill-made doors and windows, a fire-fork, shovel, and tongs, and some folding-screens, form, as Mr. Hunt says, "a tolerably correct list of the movables usually attached to this room." Even this circumscribed quantity was of necessity moved from one mansion to another in the progress of the lord, as is evident from the curious Household-Book of the great and powerful Earl of Northumberland. The thirty-first plate of this work gives, with great taste, a correct idea of the manner in which the great halls were furnished. In pp. 144-5 will be found some curious inventories of furniture belonging to a knight and to an esquire—personages, it must be remembered, somewhat different in the scale of society from those generally bearing the same title in these days. These accounts are extremely interesting. Let us examine their nocturnal comforts—their bedsteads consisted of massive and elaborately carved posts, which, with head-boards and canopies or spervers, were intricately made of wood, painted ginger colour. Hangings of heavy tapestry, preserved from generation to generation, fustian blankets, and coverlets formed from decayed garments. So furnished, we can easily imagine, that their continual fumigation by smoke of the most pungent kind, (sent forth through the apartments, in consequence of the imperfect construction of flues and fire-places), was absolutely necessary to keep under those several annoyances to which we are subject, even with all our improved habits of prevention and cleanliness; probably the hardness of our ancestors rendered them less susceptible of impression in that way. The early wills are replete with instances of the importance attached in those times even to these articles; and the bequests generally consist of furniture or of the pieces of plate which decorated the buffet or ewry board.

Subsequent to the firm establishment of King Henry the Seventh on the throne, the nobility and gentry, whose whole time and revenues had been previously absorbed in their support of the party to which they were attached, found means and leisure to attend somewhat more to the comforts of their dwellings: but the progress of refinement was extremely slow. Recourse to the artists of Venice, Genoa, and Florence, became absolutely necessary, from the few persons then remaining in this country whose profession had not been by necessity a military one. Those foreign workmen brought with them, and in their works, not only a totally different style of form and ornament from that to which this kingdom had been previously accustomed, but by them many articles of ease and elegance were introduced which were before unknown to us: even so late as 1611, the decent custom of using forks was copied from the Italians. "The invitation," says Mr. Hunt, "and encouragement held out to foreigners of all nations by Henry VII. and Henry VIII., and the protection afforded them against religious persecutions by Queen Elizabeth, laid the foundation of that glorious

pre-eminence at which our manufactures afterwards arrived. 'To the wheels and gibbets of the Duke d'Alva, England is indebted for the improvement of her manufactures: scared by his inhumanity, the Flemish artisans fled hither in shoals, and were received by Elizabeth with humanity and hospitality.'—(Andrews.)" Respecting the quantity of modern imitations, the author observes very justly, that "a rational principle of utility pervaded the works of the old artisans; and although some articles were carved in panels, with groups from sacred history, enriched with representations of shrines, altars, &c., the pieces themselves bore no resemblance in shape to the forms of buildings. Portable buttresses and pinnacles, which we now see applied to light chairs and other movables, were too absurd to enter their imaginations; and the obvious inconvenience of crockets and points at every angle, as well as the risk of destruction to female habiliments, then costly and gorgeous, would at once have struck these sagacious workmen. * * * The governing principle of ancient artisans, or rather decorators, seems to have been a desire to resist the ravages of time, more than to encourage the caprices of fashion. It must, however, be allowed, that the cleanliness of washable bed-hangings carries with it a charm beyond the magnificence of the most gorgeous materials. In this respect calico is preferable to gold brocade—and so far only is the change advantageous; for as regards expense, there is no amendment. The overwhelming draperies of modern times are at least equal in cost, though intrinsically almost valueless, to the sumptuous cloths of earlier days."

Nothing certainly can be much more incongruous than to furnish the interior of a house possessing externally the characteristics of Tudor architecture, with movables designed after the remains of Egypt, Greece, or Rome, or with the cumbrous magnificence of the age of Louis XIV. Yet we would not advocate a strict resemblance to the inconvenient articles of former times: still much might be done;—the few attempts that have been made by modern designers have all been most miserable and contemptible failures; but in the hands of artists of taste and research, designs, we are convinced, might be made that would combine consistency and convenience. We know not any person so likely to produce a satisfactory result as the author of the delightful volume before us. It is not enough that an architect contents himself with correctness on the exterior; nor can he expect that others will be satisfied, unless the same care and attention be evident within—indeed, it is here a matter of higher necessity, from the more frequent and long-continued opportunities of observation.

In again recommending the work to our readers, we may add, that whoever wishes to "talk cunningly" of old houses and old furniture should consult this volume.

SIGHTS OF BOOKS.

The Child's French Translator. First Part. By A. Graveram. London, 1829. Simpkin and Marshall.

THREE nice little French stories with interlinear translations, marking also the difference between the original meaning of French words and those by which they should be represented in English. The plan is good; and a shilling's worth of better instruction could hardly be put into the hands of the very young French scholar.

Corpus Christi. Devotions selected from the Works of the older Divines, &c. Hamilton, Adams, and Co.

A BEAUTIFUL little volume, replete with the pure spirit of Christianity: the frontispiece of the *Salvator Mundi*, from Carlo Dolce, is finely engraved.

The Olive Branch. Edin. H. S. Baynes. THIS is a religious and elegant little volume,—for even religion, now, is bound in silk and hot-pressed,—and the first of an annual series. Most of the papers are deserving of much praise; and all are directed to high moral ends.

The Zoological Keepsake for the Year 1830. London. Marsh and Miller.

Of this variety among our Annuals, we shall merely say, that it gives accounts of the Garden and Museum of the Zoological Society; and contains (of consequence) some interesting pieces of natural history. But the design has not been judiciously executed; and next year we hope to see a far better book on the same plan.

Astronomy.—We have seen a specimen of a work, to be published in four parts, entitled "The British Celestial Atlas, being a complete guide to the attainment of a practical knowledge of the Heavenly Bodies; by G. Rubie." The plan of this work appears to be a very good one; but we recommend a stricter attention to orthographical accuracy. Even in the specimen, limited as it is, there are several striking discrepancies between the plate and the text; such as—"Aldebarun—Aldebaran," "Betelynex—Betelguex." To young persons, errors like these, which they have not the means of correcting, are very perplexing.

ARTS AND SCIENCES.

GEOLOGICAL SOCIETY.

ON Friday evening in last week—L. Horner, a V.P., in the chair—several gentlemen were elected members: the Archduke John of Austria, M. Voltz of Strasburg, Professor Hausman of Göttingen, M. Hoffman of Berlin, M. Dufresnoy of Paris, and Dr. Bouié, were severally ballotted for and elected foreign members. The reading of a paper on the tertiary formations which range along the flanks of the Salzburg and Bavarian Alps, being a continuation of the memoir on the valley of Gossau, by the Rev. Adam Sedgwick and Roderick Impey Murchison, Esq. was concluded. The authors, in this interesting and able paper, seem to lean to the belief that those immense and detached masses of rock found from one extreme of the alpine chain to the other, are attributable to the bursting of lakes and rivers. Professor Buckland, after paying a glowing panegyric to the merits of the paper in other respects, dissented from this opinion, observing that these tertiary masses must have been occasioned by other phenomena—rivers, in their progress to the sea, never carrying along with them even a single pebble. The learned professor instanced the Rhone, the Rhine, and the Po. Another paper on the occurrence of the *Iguanodon*, an extinct fossil herbivorous reptile, in Sandown and Swanage Bays, by Professor Buckland, was also read. Some gigantic remains of this species of lizard accompanied the paper: a single joint of one of the toes weighed about six pounds! The chairman inquired of the professor if the latter could form any correct estimate of the size of the reptile: the professor, smiling, answered, "*ex pede Herculem!*" Amongst the presents we noticed a beautiful specimen of

septarium: the spheroidal concretions were in an exceedingly fine and polished state.

MEDICO-BOTANICAL SOCIETY.

DEC. 8.—Earl Stanhope, president, in the chair; several new members were admitted. The chairman communicated a paper, which he had translated from the German of the Medical and Chirurgical Journal of Salzburg, on the properties of *ballota lanata*, a Siberian plant, as an effectual remedy for dropsy and chronic arthritis; a specimen of the plant was also exhibited by his lordship. A paper by Mr. Mudie, author of the *Picture of Australia*, and other works, was also read: it contained some remarks on the product of the *eucalyptus mannifera*, manna gum-tree, as a substitute in New Holland for the manna of the European pharmacopœias. Earl Stanhope informed the meeting that he regretted to communicate the resignation of Mr. Yosey, one of the secretaries, whose projected voyage to North and South America, on a scientific mission, rendered that step necessary. A resolution of thanks, moved by Dr. Sigmund, was passed to Mr. Yosey for his zealous and attentive discharge of the duties of secretary. The chairman presented the three principal German pharmacopœias.

Petersburg, Nov. 11.

FOUR scientific expeditions are at this moment in full activity in Russia; and the important results that may be expected from them will probably soon prove, that in Russia the arts of peace follow in the train of war, and ennoble its victories. While Alexander von Humboldt, with his learned friends, was collecting, in eastern Russia and Siberia, new treasures of natural history, a second expedition was directed to the chain of the Caucasus. General Emanuel, who commands on the line of this mountain range, is examining, with several learned men, the country especially in the direction of Mount Elborus. The third expedition joined the victorious standard of General Paskewitch. After exploring the provinces ceded to Russia by the treaty with Persia, the travellers visited the countries in Asia occupied by the Russian army in the two last campaigns. Finally, a librarian to the emperor was sent, in September, with several draftsmen and a naturalist, into the countries of European Turkey occupied by the Russian army, in order to collect and to copy the most remarkable inscriptions and monuments. And, last winter, an antiquary was sent from Odessa, in order to examine the remains of antiquity on the whole coast from the Danube to Sizeboli.

LITERARY AND LEARNED.

OXFORD, Dec. 5.—On Monday last, in full convocation, the degree of Doctor in Divinity, by diploma, was conferred upon the Hon. and Right Rev. R. Bagot, Lord Bishop of Oxford.

On Thursday the following degrees were conferred:—*Bachelor in Civil Law* (by consultation).—W. Morgan, Esq. Fellow of Magdalen College. *Masters of Arts*.—Rev. J. Mackell, C. Wray, Brasenose College.

Bachelors of Arts.—N. Bond, Oriel College. Grand Compounder: R. R. J. McPherson, J. D. Lloyd, W. Manby, Queen's College; J. Hussey, H. Blisset, Balliol College; W. Hunt, Wadham College; A. Mangley, Portico College; Merton College; H. Hughes, Trinity College; H. Deane, Exeter College.

THE resident members of the University of Cambridge, at the division of the present term, amounted, in commons, to 1771; in lodgings, to 673.

ROYAL ASIATIC SOCIETY.

THE first of the meetings for the season 1829–30 took place last Saturday; Sir George Staunton, Bart., V.P., in the chair. The

table was literally covered with rare and valuable donations made to the Society during the recess. Colonel Doyle presented a beautiful copy of the Koran, in Arabic MS.; and also one of the Puranas, or sacred books of the Hindoos, in Sanscrit MS. The Rev. H. D. Leves presented the original *firman* granted by the present Sultan, confirming the election of the Greek Patriarch of Constantinople. This document is written in various colours, and richly ornamented: the state seal of the Turkish empire is also affixed. T. H. Baber, Esq. presented a splendid assortment of Indian armour, collected during his official career in the province of Malabar. Engravings of the Deluge, Belshazzar's Feast, and Joshua, were presented by Mr. Martin the artist.

A paper from the pen of Colonel Harriot, on the origin and language of the Gipeles, was read; and gives a comparative vocabulary of the Zingaresco or Gipeey dialect, with various Asiatic synonyms, chiefly deduced from the Hindi: the list of Gipeey words, with the corresponding terms in English, were taken down, *verbatim*, by the writer himself, a few years since, and were, very recently, confirmed by his going over them with a different party of these wanderers. This list is followed by observations on their origin, which the colonel refers to Hindostan. The date of their introduction to Persia he shews, from Firdausi's Shah Nameh, and other sources, to have been early in the fifth century of our era.

ORIENTAL TRANSLATION FUND.

SINCE we had the pleasure of announcing his Majesty's annual gift of two gold medals to the Oriental Translation Fund, we have not mentioned that very useful and flourishing Institution; but the appearance of Mr. Davis's Translation of the Haou-kew-chuen having recalled our attention to it, we shall now briefly report its recent progress.

Since the anniversary, in May, the committee has published the above-named work, and translations of a Ceylonese Masque and Poem on Demonology, illustrated with plates from Singalese drawings. Two works have been added to those which were then in the press, besides several that have been inserted in the list of those that are preparing for publication. It has also received many new allies; so that the list of subscribers is now, for its extent, probably the most splendid that was ever printed—as it contains the names of nearly all the male branches of the Royal Family, and many of the high nobility and gentry, of the Archbishop of Canterbury, and several of the bishops, besides some (we think there should be more) of our colleges and literary societies.

We are highly gratified, too, by perceiving that the O. T. F. has also attracted much attention on the Continent, and that in the subscription list are found the names of the King of the Netherlands, the Grand Duke of Hesse Darmstadt, the Duke of Orleans, the Imperial Universities of Casan and Dorpat, the Imperial Library of Vienna, and the Royal Libraries of Berlin, Dresden, Hanover, and Munich. Now that, therefore, through the prosperity of this Fund, good versions of oriental works can be printed with an entire exemption from expense to the translator, and the probability of his receiving an honorary or a pecuniary reward—we hope that ample employment will be found for the committee in the publication of versions made by British orientalists of all the most valuable Asiatic authors:—the object for which the Oriental

Translation Fund was established will then be completely attained.

THE PHARAOHS.*

I. Of some of the chronological results and bearings of the recent Hieroglyphic Discoveries.

IT is sufficiently evident, that the golden age of Egyptian art and power was during the dominion of the eighteenth and nineteenth dynasties of Manetho, an interval of about six centuries (1). To this period belong the great majority of the Pharaonic edifices and restored inscriptions, and to it general opinion seems to refer the residence of the Jews in Egypt. The right assignment of these great families is, therefore, alike important to the chronology of ancient art and civilisation, and to Biblical criticism. On this also depends the relative antiquity of the Mosaic writings, and the earliest hieroglyphic inscriptions.

The Usserian theory, now generally followed, as accommodated by M. Champollion-Figiac to the Sothic period, makes the eighteenth dynasty contemporary with the Israelitish sojournment, and the nineteenth with the times of the Judges,—the era of the Exode nearly separating the two families. The most ancient of the restored inscriptions, therefore, ascend, according to this system, to nearly four centuries (2) above the date of the Pentateuch, including the official documents of an interval of more than two centuries, pending which, the histories of both nations were not only connected, but altogether amalgamated;—a connexion that has been adopted as the basis for regulating Manetho's history, from the age of his first copyist, Josephus, till the present time: so much so, that the times of the dynasties have been uniformly elevated or depressed according to the views of sacred chronology entertained by the respective theorists.

The reader of Champollion's letters, and similar communications, cannot, however, but be impressed by the utter silence of the inscriptions in question respecting the Jews, and every event mentioned in sacred history from the age of Joseph till that of Moses; or from the reign of Mephres, or Meris, the fifth prince of the eighteenth family (Thothmosis III. in the monuments), till that of Amenophis, the seventeenth and last monarch (Rameses V. of Champollion), if we follow the received system;—a period replete with those official documents which form the basis of all true history. This silence, while the Jews were in a state of slavery, and in regard to the unfortunate events attendant on their departure from Egypt, might seem not unreasonable; but no such view of the subject can apply to the monuments of the age of Joseph, whose administration was fraught with events not to be exceeded in lasting importance to the nation, its laws, and government, by those of any age of Egyptian history. Through that patriarch his family were brought into direct connexion with the government of the country, and he was high in favour with the Pharaohs during a period of eighty years:—that is, with the sixth, seventh, eighth, and ninth princes of the eighteenth dynasty, according to the adopted system. We have, moreover, no rea-

* At this period, when the discoveries in the ancient hieroglyphic system of Egypt are exciting so deep an interest in the literary world, we have much pleasure in giving insertion to a series of papers from a very learned friend, the design of which is to apply these discoveries to the oldest histories on earth,—ascertain dates and epochs,—and fix some of the most memorable events which the Bible, the first classical authors, and these wonderfully preserved inscriptions, have handed down to our age.

son to suppose that his ministry ceased but with his life.* We find many inscriptions by princes and priests, governors and general officers; but they are all alike silent as to the patriarch himself—his father-in-law, the priest or prince of Heliopolis—Potiphar, Pharaoh's chief captain—and the transactions of their time; as, the transfer of the inhabitants of Egypt, the general assignment of their lands to the government, Joseph's agrarian law, &c.†

These difficulties, however, disappear on reference to ancient writers, to verify whose statements, it is agreed, has been the paramount result of the restored Egyptian literature. The aspersed annalist, Manetho, has already been placed in the highest rank of authentic historians; but the chronology of his thirty dynasties, on which that of the modern discoveries depends, is as much a problem as ever. Next to the general verification of Manetho, of whose works but a few fragments have reached us, that of his earliest copyists, who had his entire history before them, demands our attention. That the latter is most fully effected by the hieroglyphic researches, a brief examination will make evident. It will be found, that we have no reason to expect a word about the Israelites in the monuments of the eighteenth dynasty,—that by their silence all the best ancient authorities are confirmed; and that the Usserian theory, which refers the persecution and departure of the Jews to the reign of Rameses Miamoun and Amenophis, the last two princes of the above-mentioned family, is utterly devoid of all historical support, and no older than the great monologer whose name it bears (3).

Eusebius, who wrote in the fourth, and Syncellus in the eighth, century, the two last copyists of Manetho, (or rather copyists of his copyists,) alone among the ancients, their immediate followers excepted, referred the Exode to the eighteenth dynasty; but not to its termination. Eusebius fixed that event in the reign of Chencheres, or Acencheres I., the twelfth prince (the Ousirei of the monuments); and Syncellus in that of Mephramuthosis, the sixth monarch (Amenophis II. of the monuments);—both referring Joseph's administration to the seventeenth or Shepherd dynasty.

All writers, however, before Eusebius, agree that the whole of the eighteenth family belonged to the times after the departure of the Jews. This includes Josephus, Theophilus of Antioch, and Julius Africanus, the three original copyists of Manetho; with Tatian, Justin Martyr, and Clemens Alexandrinus, who follow the authority of the Egyptian priest Ptolemy of Mendes, Apion of Alexandria, Polemon, Justus the Jewish historian, &c. These authors confounded, or rather synchronised, the expulsion of the Shepherds by Amosis and Thothmosis, the fathers of the dynasty, with the departure of the Jews (4). It is enough, however, that they are unanimous in referring the sojournment of Israel to the times of the seventeenth family, and in altogether excluding it from the eighteenth, which they raised or depressed according to their several views of sacred chronology. Oriental writers also agree that the Jews resided in Egypt under the Shepherd dynasty.—(See *Universal History*, vol. ii. 8vo.)

Thus we find the silence of the monuments is in accordance with the unanimous evidence of the Pagan, Jewish, and Christian writers of the first three centuries of Christianity, against which the unsupported conjectures of Eusebius

* Compare Gen. xli. 46; 1. 6; and Exod. i. 6—8.
† Gen. xlvii.

and Syncellus (who are both admitted corruptors of the chronography of Africanus) can be of no moment, even did these authors bear out the Usserian theory, with which, however, it has been shown they are completely at issue. Here, then, the evidence of Manetho's most ancient copyists receives like confirmation with the fragments of that historian, from the restored inscriptions, which thus assist us in resolving the problem of Egyptian chronology. The golden age of Egypt is lowered about four centuries, or from the patriarchal ages to the times of the judges and first kings of Israel, —and the antiquity of the Pentateuch is proved to be at least equal to that of the oldest of the authenticated inscriptions, if it does not exceed them.

It is true the monumental proofs hitherto noticed are altogether of a negative description. To expect any other under the circumstances would be to look for an impossibility; and it is quite certain that such proofs as the silence of a series of state papers, to which the Phœnic lithographs are equivalent, would be deemed conclusive on any question of modern history. But when this silence harmonises with the voice of antiquity, there seems no appeal from the result. A contrary inference would, it is plain, be to depreciate the importance of the events connected with the abode of the Jews in Egypt, in a manner utterly irreconcilable with the inspired annalist. Were further proofs necessary, the fact might be adduced, that the inscriptions of the dynasty in question are uniformly dated in the Egyptian months, according to their names known to the Greek writers. We know the Jews brought the Chaldean months from Babylon, and ever afterwards used them. But had the calendar to which the Egyptian months belong been current before the departure of Moses, who was "learned in all the wisdom of the Egyptians," it can hardly be doubted but he would have adopted them. Hence we may infer, that the calendar in which the inscriptions are dated, and consequently the inscriptions themselves, are all of a date inferior to the Exode.

Another proof of the present system being at issue with Scripture, is to be found in the history of Ramesses the Great, or Sesostris, the first prince of the nineteenth dynasty. He is agreed on all hands to have been heir to the throne at the time of his birth, which, we learn from Diodorus, was the subject of prophecy. The same writer acquaints us, that all the males born on the same day in his father's empire were educated with Sesostris, to be his companions in arms; and that of these, no less than 1700 remained on his accession to the throne. But if Amenophis, the last of the eighteenth dynasty, the reputed father of Sesostris, (5) reigned when Israel left Egypt, what becomes of the inspired account of the destruction of the first-born? It need hardly be urged, that if the Usserian system be the true one; either this account must be rejected, or the early part of the history of Sesostris dismissed as a fable. But, independent of this, how is it possible to reconcile the flourishing state of Egypt in the reign of Sesostris with the desolation to which the country was necessarily reduced by the destruction in the Red Sea, immediately preceded by that of the first-born? the more so, as the first nine years of Sesostris, the time of his conquests, fall within the twenty-six years next after the Exode, according to M. Champollion; but immediately follow that event according to Ussher, which is still worse. It is certain

that no ancient writer ever thought of such an inconsistency. The ancients by rightly fixing the eighteenth dynasty in the times of the Judges, necessarily placed centuries between the ages of Sesostris and Moses, and raised or lowered the time of the former, according to their respective eras of the departure from Egypt. Hence, by following those writers who had a right to know best, we find sacred, profane, and monumental history all in strict harmony; whereas, by seeking in the monuments what history teaches us we should not expect to find, —these inestimable discoveries, instead of confirming and elucidating the inspired writings, really become a handle for scepticism.

Notes to the References in the preceding Essay.

(1) The time of the eighteenth dynasty was 393 years in the copy of Josephus, as he repeatedly tells us in his first book against Apion. He omits that of the nineteenth, —but it stood 209 years in the copy of Africanus: the sum of both is 602. These periods are stated 348 and 194, amounting to 542 years, by the author of the old chronicle and Eusebius, who are here followed by M. Champollion. For the dates of Manetho's five copyists, and of our modern hieroglyphicists, see table at the end.

(2) It should be observed, that the eighteenth dynasty, which it is customary to date from the expulsion of the Shepherds by Thothmosis I., unquestionably began considerably earlier, including at least the former part of Thothmosis' reign occupied in the siege of Abaris, and that of his father Abiaphramuthosis, called Ahmosis, or Amosis, in the monuments. (See Champollion's twelfth and fourteenth letters, *Literary Gazette* of Sept. 19th and Nov. 14th.) This first period is usually referred to the seventeenth legitimate dynasty of Africanus, but belongs to the eighteenth, according to the most ancient and circumstantial extract of Josephus, in which it appears the time of the family was 393 years; but the reigns from the expulsion of the Shepherds sum up 333 only. The previous interval was therefore sixty. —*Joseph. contr. Apion*, lib. i.

(3) This theory is founded on a transfer of the second expulsion of the Shepherds under their leader Oenaraph, also called Moses (a common Egyptian name), from the reign of Amenophis, the third prince of the nineteenth dynasty, to that of the last Amenophis of the eighteenth, and by raising the reign of the latter to a date unknown to any ancient writer, as will be seen by the table at the close of this essay. The whole proceeding is unsanctioned by antiquity. This second war with the Shepherds happened not only long after the Exode, but was posterior to the building of Jerusalem and the Temple. —*Ibid.* lib. i. sect. 26.

(4) That the Shepherds began to leave Egypt about the time of the Exode, is evident from the celebrated fragment of the 40th book of Diodorus, as well as from a comparison of the Parian chronicle with the Mosaic chronology. They were no other than the family of Io of Greek writers, called "men of Gath" in 1 Chron. vii. 21; which latter fixes them as contemporaries of the Jews in Egypt, and indicates their Phœnician origin. —See Amos, ix. 7. This accounts for Josephus and his followers having mixed up the history of the Shepherds and Israelites.

(5) This relationship has no foundation in Manetho. It results solely from the transfer of the history of Amenophis and his son

Ramesses of the nineteenth dynasty, to the kings of the same name, who end the eighteenth and begin the nineteenth families, as before alluded to. If it has any monumental foundation, the writer is ignorant of it. But if so, how happens it that the great Diospolis series, is separated into two families? It would appear from M. Champollion's fourteenth letter (see *Literary Gazette*, Nov. 14th), that Ousirei, the twelfth prince of the eighteenth family, was the last kingly ancestor of Sesostris, his genealogy being there given from Amosis. This is in singular agreement with a passage relating to the conqueror inserted metachronically in the twelfth dynasty, according to both Africanus and Eusebius. It concludes:—"By the Egyptians he is supposed to be the first of the Ousiris: whether in regard to time or estimation seems uncertain; but if the former, it is strictly conformable to the monumental genealogy above mentioned." It should be noted that Mandouei, or Acencheres II., succeeded his brother Ousirei, or Acencheres I., the progenitor of Ramesses VI., or Sesostris; and from Mandouei were immediately descended the last four kings of the eighteenth dynasty. All this puts the mistake of applying the history of Amenophis of the nineteenth family to the last prince of the eighteenth — on which the whole Usserian theory absolutely rests—in a very obvious point of view.

THE ROYAL CORK INSTITUTION.

THIS establishment (of which the Rev. T. D. Hincks may be called the founder) was embodied by charter in 1807, and received an annual parliamentary grant of 2600*l.* towards its support; but as the suggestion of Mr. Hume and Sir John Newport, in the last session of parliament, it was determined that this grant should be withdrawn. The foundation of a college upon the wreck of the Institution appears to have been suggested to the proprietors by Dr. Bullen, jun.; and a meeting was in consequence recently held in Cork. By this meeting, a deputation has been appointed to wait upon the Irish government with a memorial, in which it is stated, "That, on reference to the past correspondence between the government and the managers of the Cork Institution, there appears to be a strong claim on the good faith of government for assistance towards carrying their plans into effect—a claim rendered still stronger, by the obvious advantages of a plan for diffusing useful knowledge in the South of Ireland, on a more enlarged principle than has hitherto been found practicable." Mr. Callaghan, M.P., Dr. Tuckey, and Mr. Charles Beamish, were the principal speakers at the meeting.

FINE ARTS.

ROYAL ACADEMY.

DEC. 10.—The annual distribution of the gold and silver medals took place this evening, when there was a very full attendance of the Academicians, and Sir Thomas Lawrence presided. The following is the order in which they were adjudged:—In painting, the gold medal to George Smith; sculpture, the gold medal to James Legrew; in architecture, the gold medal to William Grelhier; for the best copy from Vandyke (Holy Family), Richard Augustus Clack, the silver medal; the same prize was also awarded to H. L. Smith,—but as

* We observe that Collegiate Institutions are likely to spread, in consequence of the new establishments in London: Bristol has taken the lead, in founding a public seminary of this kind.

this artist obtained a medal last season, the prize this year was withheld, agreeably to the Academy's rules; for the best drawing from life, the silver medal to J. H. Millington; for the same, to F. Goblet, also withheld on the same ground as Mr. Smith's; for the best model from life, the silver medal to R. C. Lucas; for the best elevation of a banqueting-house (class architecture) the silver medal to J. W. Pusey King and William Barnes; drawings from the antique, the silver medal to D. McClise and John Bell; models from the antique, the silver medal to Richard Warren and E. G. Papworth.

The President delivered the medals to the students in the most kind and affectionate manner, warmly recommending them to pursue their studies with unabated ardour, as the only means of attaining excellence.

NEW PUBLICATIONS.

The National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century. No. VIII. With Memoirs by W. Jerdan, F.S.A., M.R.S.L., M.R.A.S., &c. Fisher, Son, and Co.

It cannot be suspected that we have any undue bias towards the new editor of this work; and therefore, when we unequivocally state that the present Number of it, which is the first that has been published under his superintendence, appears to us to evince singular talent, discrimination, and taste, no one can impute the favourable opinion to personal motives: on the contrary, general admiration must be excited of that candour which is not to be deterred by any considerations from telling the truth.

But, seriously speaking, the three portraits of Pitt, West, and Wrangham, ably engraved, and sold for three shillings, are sufficient to make these *National Portraits* nationally popular, even without the biographical sketches, respecting which we need therefore only state, that the Memoir of the late President of the Royal Academy contains some new and interesting particulars.

Illustrations of Ireland. Nos. 8 and 9. Fisher.

HIGHLY romantic scenery, and singularly picturesque edifices, form the embellishments of these two Nos. We think, however, the "Illustrator" would have shewn more taste, if, in comparing the views from Windsor and Kilkenny castles, he had abstained from talking about what he is pleased to call "the tame genius of Mr. Pope."

Picturesque Views on the River Clyde; engraved by Joseph Swan, from Drawings by J. Fleming, with historical and descriptive Illustrations by J. M. Leighton. Parts 10, 11, and 12.

THE clever engraver of these views will really render the Clyde quite a Swan-river. Happy would it be for the adventurous emigrants to the latter, if they could find such lovely scenes in the distant region to which they have banished themselves! The plates in these three Nos. are full of picturesque beauty; and the descriptions contain much interesting information.

Picturesque Antiquities of the English Cities; by John Britton, F.S.A., M.R.S.L., &c. No. 4.

THE delay which has taken place in the publication of this No. of Mr. Britton's highly interesting work is amply compensated by the excellence of the engravings with which it is embellished. They are ten in number. Our favourites are,—"Christ Church Gate-house,

Canterbury," "The Hall of St. Mary Hall, Coventry," "The Kitchen of St. Mary Hall, Canterbury," "View in Castle Street, Salisbury," "View in Silver Street, Salisbury," and "View in Friars Street, Worcester." An incident in "The Entrance-Tower Gate-way to the Bishop's Palace, Peterborough," reminds us of the whimsical close of Washington Irving's admirable story of "The Stout Gentleman."

Gothic Ornaments; selected from the different Cathedrals and Churches in England, by Thomas Atkinson, Architect. Nos. 11 and 12. T. Griffiths; Priestley and Weale.

WE do not recollect having met with the earlier parts of this publication. The present contain various lithographic representations of capitals, spandrels, bosses on mouldings, finials, &c., from Ely Cathedral. They are delineated with great distinctness, and will no doubt be very useful to the architectural student.

Outlines of the Eginia Marbles; drawn from the Statues at the Liverpool Royal Institution, by Edward Lyon. Moon, Boys, and Graves.

"It is with feelings of great diffidence," observes Mr. Lyon, in a prefatory address, "that one of the many youthful aspirants to public notice ventures to submit this effort to the notice of his countrymen, in the hope of diffusing among them some idea of these admirable remains of ancient art. With a view to improvement in his profession as a sculptor, he was long engaged in drawing from the different rare and valuable casts deposited in the Liverpool Royal Institution, before he undertook to delineate the statues of the Temple of Panhellenian Jove, from the island of Eginia. The Institution is indebted for the possession of the casts from the marbles of that temple to the liberality of Mr. Foster; to whom all students who have learnt to appreciate their value will acknowledge the deepest obligation."

The outlines are fifteen in number, and are drawn with great firmness and intelligence. They are preceded by brief but sufficiently explanatory descriptions of the figures, and by two plates "of the details and restoration of the temple, founded on the measurements and observations of the discoverers, and its masonry ruins."

Miss Fanny Kemble. On stone by W. Sharp, from an original Sketch.

The Young Commodore. Sketch by Hayter; drawn on stone by Sharp.

The Rose and Lily. J. Wood. On stone by Sharp.

The Head of the Family of Gerini, from Correggio.

THE above are printed by Hullmandel, and published by Dickinson; and are all highly creditable to the cultivation of the lithographic art in England. In some, ease and grace—in others, strength and expression, prevail; and whether it be the rising genius of the delightful scion of the gifted Kembles, or the now (but for the painter's art) forgotten head of the Gerini, we are much pleased to dwell on these sweet works of art.

ORIGINAL POETRY.

THE WANDERER'S RETURN.

THE flush of Spring was on the rustling woods,
And, like a sportive child, the balmy May
Came smiling forth amidst her earliest flowers,
When, with a faltering pace and saddened brow,
I passed from scenes endeared by infancy,

To battle on the stormy sea of life:
Tears were upon my cheek; for I had left
My native dwelling, with its antique walls,—
And aged hands had rested on my head,—
And tongues, whose feeble accents were not
given

To welcome my return, had bid me speed,
And prayed the might of Heaven to shield my
course.

I paused awhile beside the rustic bridge,
Which threw its mouldering arch across the
stream [wave,—
My noontide haunt, beside whose limpid
Contrasting with the hawthorn's buds of
pearl,—

The hazel drooped its dank and humid boughs,
And, chequering the moss with clusters blue,
The slender speedwell flourished;—calm in
light

The waters murmured onward, here and there
A moment furrowed by the insect's mirth;
A softened incense came upon the breeze—
The fragrant violet's breath; and on my ears
The merry bells rang out their joyous tones,
In well-known music from that house of
prayer,

Whose turrets ivy-wreathed, and glittering
Arose above the distant forest's boughs.

I turned aside. The scenes of perished years,—
Remembered visions of the time when life
Is but a waking dream,—and that deep sense
Of beauty from the homeliest spot when left,
Though latent, or but feebly known before,—
Had passed across my mind;—but with them
rose

The golden promises of youth and hope;
Thoughts of the hour when Fame should send
me back

With honour from her thronged arena's space,
High deeds achieved, and danger's guerdon
won,

To rest within the sacred pale of home.

It was a gorgeous eve;—the first faint tint
Of Autumn scattered o'er the stately elms,
Whose leaves yet trembled in the slanting
light;

And, on the western firmament, the glow
Which canopies the ocean-couch of day.
Again I stood beside that ancient bridge,
And gazed in silence on the darkening flood.
Peace, as of old, was dwelling there: the
voice

Of children, clamorous in thoughtless mirth,
And the lone robin's chirp, from fading brakes,
Spoke with a sound of welcome. On I passed;
But from my vacant dwelling none came forth
To bid me enter. Weeds and rankling grass,
The darnel, and the purple thistle's crest,
Waved in the courts, whose hollow echoes told
Of desolation, long and undisturbed.

I wandered forth. The hum of busy life,
And smiling faces, and familiar words,
Were round me; but from those assembled
groups

No voice of friendship rose: they knew me not,
Themselves unrecognised. I stood alone,
Amidst a peopled desert, sick at heart—
The hope of years in one short hour made vain,
I paused before a dim and sculptured porch,
Whence came the organ's solemn harmonies,—
A low, angelic strain, which seemed on earth
Breathed by the tongues of heaven, to soothe the
despair

And hush repining. Mournfully above
Still waved the banner; and the iris staid,
On time-worn arch and sombre monument,
Fell with fantastic hue. I entered in:
There were the pillars gray, and warlike
forms—
My childhood's wonder—and the quiet niche

Where first my infant lips were taught to pray.
But round the walls were unremembered
tombs,—

Pale records of mortality,—which bore
The names of those I sought. Apart from all,
A humble stone revealed the resting-place
Of youth and beauty,—once the cynosure
To which my hopes were led; the blooming
stay

Beside a parent's age—the unconscious theme
Which fired a hundred tongues: a drooping
flower—

An urn—a severed chain, disclosed the rest.

Restore me to those distant climes again,
The fragrant regions of the boundless East,
Where waves the palm its dark luxuriance,
And bends beside the stream the fleet gazelle!
The pathless desert, and the blast of death;
The storm, the withering license of disease,
And, worse than all, the lawless wrath of
man:—

Even these were better than the sight of haunts
Which mock the weary spirit's communings
With one reply of grief: and, found at length,
But speak of ties dissolved, and friendships
past,

And peace which life is powerless to renew.

J. F. H.

SKETCHES OF SOCIETY.

TREBIZOND.

FROM the earliest times this city has borne the name of *Trapezos*, the "table" or "quadrangle," a name it probably received from the quadrangular form of the walls that enclose its citadel, which stands on the acclivity of a mountain. It has been converted by the Turk into that of *Tarabosar*. It was originally colonised by the Greeks of Sinope, of which it formed a dependency, and afforded a hospitable welcome to the ten thousand on their return from Persia under Xenophon. History has not recorded the state of *Trapezus* under Mithridates; but the embellishments and improvements it derived from Trajan, Adrian, and Justinian, may be inferred from the inscriptions and coins which have survived the wasting breath of time, no less than from the existing remains of Adrian's port and Justinian's aqueduct. Whilst the Hellenist boasts of Sinope as the parent of the Cynic, the modern Greek dwells with veneration on the name of *Trapezos* as the birth-place of Cardinal Bessarion and George the Rhetorician.

This place is as much celebrated in the East for its orchards and fisheries, as Sinope is for its apples, and *Kerasos* for its cherries. Its natural advantages and favourable position raised it, in Trajan's time, to the rank of the capital of Cappadocian Pontus; and it was the extreme point to which the Goths pushed their first inroad along the Euxine. Though encompassed by a double wall, and garrisoned by ten thousand men, these barbarians took it by storm, put its defenders to the sword, sacked it with reckless fury, and loaded their ships with an enormous booty. Upon the taking of Constantinople by the crusaders under Baldwin, Lascaris, the Angeli, and the Comnenes, transferred themselves with their barren sceptres to Nicæa, Epirus, and *Trapezus*: by this means the latter became the seat of what is called the Trebizond empire, under Alexius; and his impotent successors, encircled on every side by powerful neighbours, sought to prolong their existence by marriages and alliances with them. The princesses of their dynasty not only bestowed their hands on the Byzantine sovereigns, but humbled themselves to the con-

tracting of matrimonial ties with the princes of the black and white wethers, with Tamerlane's grandsons, and many a less illustrious barbarian neighbour.

The first contact between Trebizond and its present Ottoman masters took place in the time of John, the penultimate sovereign of the Comnene family, when it was attacked by Chir-bey, commander of Amasia, who carried nearly two thousand of its inhabitants as slaves away into captivity; though Mahomet II. upon John's consenting to pay him an annual tribute of two thousand ducats, caused them to be restored to their sovereign. David, the brother and successor of John, by refusing to continue a tributary of the Ottoman, drew upon himself the vengeance of the sultan, whose appearance before Trebizond in 1461 was the prelude, not only to his abject submission, but to his departure into captivity at Constantinople, and the extinction of his empire, the slender domain of which became thenceforward part and parcel of the Turkish dominions.

I could dwell, with swelling indignation, on the miserable fate which attended the last scion of the Trebizond dynasty, were I not become impatient of overloading the cup of Ottoman atrocities, which the history of the last five hundred years has filled to the utmost brim. Suffice it, therefore, that I leave them unrecorded in this fleeting sheet, and turn my attention to the actual state of a spot which was once the seat of empire.

A walk of about three hours, in a southeasterly direction, brings you to a hill which commands a view of the whole coast. It was from this very eminence that the ten thousand Greeks, after aiding the Macrones in their defeat of the Colchians, with loud acclamations welcomed the tempestuous waters of the Euxine, conceiving it either to be the same liquid expanse which rippled upon their native shores, or to blend its billows with their loved *Ægean*. Upon this same eminence Arrian stood enrapt in admiring recollection of their glorious exploit, though five centuries of Roman glory had since revolved; and here we lingered with feelings of scarcely inferior reverence after the revolution of seventeen. But whither has perished the statue of Adrian its benefactor, or of Mercury its tutelary deity? where are the baths, and temples, and gorgeous edifices, with which the magnificent taste of Rome raised it to significance and splendour? Some scattered walls and ruins alone remain to breathe in the ear of classic curiosity, "How perished are they from the things that be!" And yet it was fondly constructed for a perpetuity of sublunary existence, and surrounded with a double range of battlements. Its origin is said to date from Anno Mundi 4790, when the Milesian colonists of Sinope laid its first stone; and that such an origin may be accepted of it, is rendered more than problematical by the existence of an ancient coin, which bears on one side a head of Apollo, and on the reverse, an anchor with a ship's prow, encircled by the legend ΤΡΑΠΕΖΟΝΤΙΩΝ. It was completely renovated, and enriched with public edifices, by Justinian; and memorials of his magnificence are yet extant in the noble church of St. Sophia, which lies westward beyond the walls; as well as in the basilik, dedicated to the Virgin Mary, in the centre of the town. In the present day it is become the seat of the pashalik of Amasan; covers, from its interspersed gardens, a considerable area of ground, which lies between two steep masses of rock; and is estimated to contain fifteen thousand inhabitants.

In one of my rambles I observed the cele-

brated fountain of the Dragon, said to have been erected in 1204 by Alexia, its first duke, in commemoration of his exploit in killing an enormous dragon, the head of which animal decorates the extremity of the spout. Beyond this, I found nothing deserving of notice, excepting the remains of Justinian's aqueduct, and the tomb of Solomon, the last king of Emeritia, who sought an asylum in this town against the intrigues of the Russians, and died here in the beginning of 1815. It is a species of quadrangular cage of iron wire, closely interlaced, and supported at each corner by a pillar of whitish stone; the whole being covered by a dome: its height is some fifteen feet, and its bases about ten. The lower portion is solid, and, rising to the upper part of the pedestals of the four pillars, encloses the coffin.

At our audience of the pasha we were received with great pomp. The court-yard was lighted with torches, and the centre of it filled with musicians, who saluted us with Turkish airs—in other words, stunning our ears with the clatter they produced by sudden thumps on metal wires, the said clatter being no wise mollified by the prolonged cadences of two or three shrill pipes, and the whole concert being characterised by a sovereign disregard for the laws of measure or harmony. Such, however, is the uncouth original of what passes with us for Turkish music.

MUSIC.

THE opening of the new Athenæum of Music at Paris took place on the 26th ult., in the saloon of St. John, a splendid apartment in the Hotel-de-Ville. The room was filled with a numerous and brilliant assemblage of persons, among whom were many distinguished by their rank and talents. The business was commenced by M. Miel, a gentleman well known in the literary circles, who pronounced an eloquent panegyric on the Institution, and stated its object to be the encouragement and improvement of one of the most delightful of the sciences. After a rapid view of the progress of the fine arts in general, and of music in particular, among the ancients, (in the course of which he drew a comparison between the different kind of gratification imparted by them to the senses, and assigned to music the pre-eminence over both poetry and eloquence),—the orator proceeded, in an animated address, to recount the disadvantages under which the former science laboured, from the want of that general diffusion of cultivated taste requisite to appreciate it properly; and passed thence, by an easy transition, to the objects and merits of the Institution, in fostering talent and diffusing instruction. On concluding, a favourite quintette of Mozart's, with a variety of compositions original and selected, were performed by the *élèves* of the Institution, with great *éclat*; and every thing seems to augur well of its success. Mademoiselle Leroux, of the Ecole Royale, is spoken of as distinguishing herself highly by her mode of singing.

THE operas by the pupils of the Royal Academy of Music are very successful, and are bringing forward highly cultivated talent, which promises long to delight the public. Miss Childe and Mr. Seguin are greatly distinguished on these occasions, and the whole reflects eminent credit on the instructions of Crevelli, certainly one of the best teachers of singing that ever gave instructions in London.

DRAMA.

COVENT GARDEN.

OTWAY's over-rated tragedy of *Venice Preserved* was revived here on Wednesday last, when Miss Fanny Kemble appeared as *Belvidera*, and confirmed the high expectations that had been formed of her. Some beautiful new scenery by the Grieves was displayed on the occasion:—the first scene, St. Mark's Place and the Ducal Palace with the well-known columns, and the Adriatic in the distance, was perhaps never equalled upon the stage. The house was crowded; and Mr. Kemble being loudly called for at the end of the tragedy, announced it, with considerable emotion, for repetition every Wednesday and Friday till further notice.

VARIETIES.

Ambrogeth.—The newspapers have revived the old rumour of this clever buffo's being an inmate of La Trappe: we ascertained at the time it was first broached, that it was not true. He had settled quietly in Italy.

The Siamese Boys.—Our double friends have been so unwell with a cough that they have not exhibited for the last two or three days. Mr. Bolton, their medical attendant, however, states that they are much better. Mr. Ackermann has published a pretty portrait of them playing at battledore and shuttlecock.

A formation precisely similar to the Siamese youths was recently prematurely produced at Leeds; and the editor of the Leeds Mercury has preserved it for medical inspection.

The Elephant.—One of our Paris letters says, the departure of the "half-reasoning beast," on a visit to John Bull, and to place himself at the head of the new firm at the Adelphi, under the denomination of the Elephant, Mathews, and Co., has quite enraged us; but the Parisians will be consoled for her loss by the exhibition of a pigmy, who will shortly make his *début* at Franconi's Circus, in a new piece, to be entitled "Wamber, or the Sunderland Dwarf." It has been well observed that extremes meet.

Royal Society and British Museum.—Mr. Babbage has, in a letter addressed to the editor of the *Times*, stated that he was not a member of the council of the Royal Society last year: and as he has said simply this, and nothing more, it may be inferred, we think, that he is the author of the correspondence in which the plan of an exchange of articles between the Society and British Museum is so bitterly impugned.

The Literary and Antiquarian Society of Perth held their anniversary meeting on 26th Nov., which was more numerously attended than on any former occasion. The president, Earl of Kinnoull, took the chair; and Lord Gray, and other vice-presidents, the Lord Provost of Perth, Mr. Trotter of Ballindean, &c., occupied the table at the head of the museum. The secretary then read the report of the proceedings of the Society for the past year, in which the discovery of several monuments of antiquity in the county of Perth, and the preservation of others, which had engaged the attention of some of the members, was given; and numerous donations to the museum were detailed. The Rev. Mr. Esdaile read the second part of a very able essay, the first part of which was given on a former occasion, "on the progress of luxury, and its influence on society and manners." Dr. Anderson followed Mr. Esdaile with an elaborate and ingenious disquisition "on the variation of the barometer,

particularly in different latitudes and regions of the earth, with an inquiry into the causes of these phenomena." About sixty members afterwards dined together.—*Abridged from the Perthshire Courier*.

A meeting of the Cambridge Philosophical Society was held on Monday week,—the Rev. Dr. Turton, the president, being in the chair. Mr. Rothman, of Trinity College, read a notice of an observation of the winter solstice at Alexandria, which is recorded in Strabo, and which has not hitherto been understood, from its being spoken of by the author as an observation of an equinox. Professor Whewell continued the reading of his paper "on the causes and characters of pointed architecture," and explained the influence of the pointed arch upon the other members of buildings, through which influence the romanesque style was at last superseded by the very opposite forms of the Gothic. It was stated also that the transition from one of these styles to the other, which took place in England by means of the early English style, was made in Germany by means of a very different one, which may be termed early German. Of this style the characters were given in some detail, and it was remarked that, among these, the invention of the flying buttress was of as much importance to the complete development of the Gothic style as that of the pointed arch. Observations were also communicated by Mr. Millar, of St. John's College, on the forms and angles of the crystals of boracic acid, indigo, and borate and bicarbonate of ammonia. After the meeting, Professor Sedgwick gave an account of the geological structure of the Austrian Alps, illustrated by the representation of a section traversing their chain, and passing from the plains of Bavaria to the Gulf of Venice.

M. Villemain has commenced his lectures. *L'Histoire du Moyen Age* is the interesting subject he has selected for this winter. Two thousand persons attended his first discourse, and nearly as many went away for want of room. "Petite Nièce de Ninon" is a new roman which will be highly appreciated by the amateurs of emotion: the style also of this little work is peculiarly *gracieuse* and *facile*. Madame de Genlis has been seriously indisposed within these few days; she is considered in imminent danger: her intellects, however, are not affected by bodily sufferings; and she sees death approach not only with *sang froid*, but without regret. A curious composition is about to appear—"The Perfection of Imperfection:" on the principle that extremes meet.—*Paris Letter*.

Parisian Theatres.—The following are the receipts of the Paris theatres—with the exception of the French opera, for which there is no return during the month of November:

Vaudeville	75,385f. 65c.
Théâtre de S.A.R. Madame	45,761 25
Cirque-Olympique	49,368 —
Opéra-Comique	47,987 25
Variétés	44,376 60
Opéra	46,197 10
Théâtre-Italien	35,808 90
Odéon	32,948 65
Théâtre-Français	32,664 84
Ambigu	29,609 14
Gaité	29,303 25
Porte-St.-Martin	22,379 70
Nouveautés	21,617 65

Christina Ritta.—Before the death of this extraordinary child a portrait of her was presented to the French Academy, and some curious facts respecting her were mentioned at the same time. It was stated that the two parts of this double being had not equally grown; for that the right part (Christina) was evidently more developed than the left (Ritta).

The inferior extremities were both slender; nevertheless the right was less so than the left. Each body had a stomach, and the intestinal canals did not appear to unite until below the small intestines; but there was but one heart, belonging to the left part, Ritta. The double formation was more prolonged behind than before; for there were two vertebral columns which continued separate to their lower extremity. Dissection will now, no doubt, furnish more minute and accurate details on this subject.

Mount Elborus.—The investigation that was made on the ascent of Mount Elborus, the highest of the chain of the Caucasus, gave the following results. The hot mineral springs are 1,400 English feet above the level of the sea; the line of snow on the Elborus 11,000 feet; the point to which Messrs. Kupfer, Menetrier, Meyer, and Bernadotzi, attained, 14,000 feet; the point reached by M. Lenz 15,700; and the highest summit which was gained by a native of Kabardina, named Chilar, 16,330 feet; being more than 2,000 feet higher than Mont Blanc.

LITERARY NOVELTIES.

Mr. Samuel Drew, editor of the *Imperial Magazine*, announces a reprint of his *Original Essay on the Immateriality and Immortality of the Human Soul*.

Dr. Morton informs us that he is preparing for the press *Travels in Russia, and a Residence in St. Petersburg and Odessa in the Years 1827, 8, 9*; intended to give some account of Russia as it is, and not as it is represented to be, &c. &c.

Mr. Bernays has in the press a compendious German Grammar; to be followed by a Dictionary of German Prefixes and Affixes, explained in conformity to the recent investigations of Grimm and other distinguished grammarians.

The first tale in the *Juvenile Forget Me Not*, recently published, is from the pen of the late Mr. Barbauld—but was never intended for publication. Her nearest relatives have requested us to reclaim, in this instance, against the growing practice of obtaining and publishing productions intended for the private circles and occasions which called them forth.

London in a Thousand Years, with other Poems, by the late Eugenius Roche, Esq., Editor of the *Courier*, &c.—is announced for early publication, and by subscription.

The Second No. of Mr. Harding's *Lithographic Drawings after Bonington* will soon appear.
In the Press.—Peter the Great, being Vol. XV. of Whittingham's edition of the French Classics.

LIST OF NEW BOOKS.

Hartshorne's Book Rarities in the University of Cambridge, 8vo. 1l. 11s. 6d. bds.—Hamrick on Amputations, 8vo. 9s. bds.—Kendrick's Conversations on Miniature Painting, post 8vo. 10s. 6d. bds.—Creighton's Siege and Capture of Bhurtpore, 4to. 1l. 1s. bds.—Gracie's Worship in the Presbyterian Church, 8vo. 10s. 6d. bds.—Recollections of a Blue-Coat Boy, 18mo. 2s. 6d. hf.-bd.—Draper's Class-Book, 12mo. 3s. bds.—Toy-Shop, or Sentimental Preceptor, 18mo. 2s. 6d. hf.-bd.—The Lotus, or Faery Flower of the Poets, 18mo. 4s. bds.—Hatfield's Moments of Loneliness, fcp. 7s. bds.—Crabbe's History of English Law, 8vo. 16s. bds.

METEOROLOGICAL JOURNAL, 1829.

Prevailing wind, S.E.

Except the 9th, cloudy; a sharp frost on the morning of the 7th.
The height of the barometer on the 6th is deserving a particular remark.

Edmonton. CHARLES H. ADAMS.
Latitude 51° 37' 39" N.
Longitude 0 3 51 W. of Greenwich.

TO CORRESPONDENTS.

Messrs. Biefield's notice is unintelligible, from the seal being upon the name.

J. L. can scarcely think it worth our while to correct the ignorance of a pawnbroker with regard to a picture. Many greater mistakes are committed by much higher authorities.

ERRATUM.—In our notice of the Linnean Society last week, for "scarce parasitical plant Vanilla," read "scarce parasitical," &c.

ADVERTISEMENTS

Connected with Literature and the Arts.

ROYAL INSTITUTION OF GREAT BRITAIN, Albemarle Street, 7th December, 1889.

Jocose Lectures.
MICHAEL PARADAY, Esq., F.R.S. Cor. Mem. Royal Acad. Sciences Paris. Director of the Laboratory, will deliver, during the Christmas Vacation, a Course of Six Elementary Lectures on Electricity, adapted to a Juvenile Audience. To commence on Tuesday the 26th inst. at Three o'clock, and to be continued on Thursday the 28th, Saturday the 30th, Tuesday the 2nd, Thursday the 4th, and Saturday the 9th of January, at the same hour.
 Non-Subscribers to the Institution are admitted to the above Course on payment of One Guinea each; Children, 10s. 6d.
 A Prospectus and further particulars may be obtained on application at the Royal Institution.

JOSEPH FINCHER, Asst. Sec.

GOVERNESS. A Lady in her 30th Year

is desirous of undertaking the usual Branches of Female Instruction, in a respectable Family. The Pupils who have been under her care for the last Four Years and a Half are now finishing their Education without the Assistance of Masters.
 Letters, post-paid, addressed M. S., Post Office, Camberwell Green, Surrey.

FOR SALE. The STOCK and GOOD.

WILL of an established Business in the Bookselling and Stationery Trade, in one of the first Towns in Scotland, yielding a clear profit of 2000. per Annum.

The Stock is small and select, and the Connection most respectable; while the available Capital required of a Purchaser may not be more than 6000. or 7000. in short, few such opportunities occur for a young Man of moderate Capital entering at once into a snug Retail Business.

Bad Health is the sole cause of the present Proprietor retiring from it.
 Apply by Letter only, post-paid, to Mr. F. J., care of Messrs. Hurst, Chance, and Co. 66, St. Paul's Churchyard, London.

SIR ASTLEY COOPER, in his Treatise

on Hernia, Part I. Plate VI. represents various improved Patent Trusses, in their true Character, and a decided preference is given to Coles' Patent, viz.—The spiral spring in the pad allows it to yield in the various motions of the body, and at the same time to make a more uniform pressure than the ball and socket pad (Salmon's) can effect.

Manufacture removed from London Bridge to No. 3, Charing Cross.
 * * * Read Boyle's Court Guide.

OMNIBUS. This Game differs from any

yet played with Cards, is admirably calculated for a large Party, and is allowed by all those who have yet played it, to be one of the most interesting and amusing Games ever invented. Published by D. Carvalho, 74, Chiswell Street, Finsbury Square. Sold by Goodall, Cardmaker, Great Pulteney Street; and every Stationer in the United Kingdom.

Retzsch's Illustrations.
 Published and imported by T. and T. Boosey, Broad Street, City, and 28, Holles Street, Oxford Street.

RETZSCH'S SERIES OF TWENTY-

SEVEN exquisite OUTLINES, illustrative of the Tragedy of Faust, and Portrait of the Author, engraved by Henry Meissner, 4to. M. 1s. 6d.

Retzsch's Outlines of the preceding may be had separately, 4to.—15s. boards.

Retzsch's Sixteen original Outlines to illustrate Schiller's *Wallenstein*, 4to. fine paper, uniform with Faust, 14s. boards.

A HIGHLY FINISHED LINE

OF A VIEW OF THE NEW BUILDINGS OF ST. JOHN'S COLLEGE.

Critical Sketches: XIV. Ippolito Flindermonte.—XV. Gerostina's Theatre.—XVI. History of the Inquisition in France.—XVII. *Ugo Foscolo*.—XVIII. Caroline Wollmann's The Sculpture, a Novel.—XIX. Bartholomew and Mary's Waterloo, a Poem.—Miscellaneous Literary Notices.—List of the principal Works published on the Continent from July to October.

No. X. will be published in Feb. 1890.
 Published by Frostel and Warts, Trentalt, Jan., and Richter, Foreign Booksellers to the King, 30, Soho Square.

HISTORICAL AND DESCRIPTIVE

NARRATIVE OF TWENTY YEARS' RESIDENCE IN SOUTH AMERICA.

By W. B. STEVENSON,
 Formerly Private Secretary to the President and Capt.-General of Chile, Colonel and Governor of Santiago, and Secretary to the Vice-Admiral of Chile, His Excellency the Hon. Lord Cochrane, &c.

Containing Travels in Arauco, Chile, Peru, and Colombia; with an Account of the Revolution, its Rise, Progress, and Results.

"Of all the books which have issued from the press, relative to this interesting portion of the globe, the travels of Colonel Stevenson, which have recently been published, contain the fullest account we have seen of the manners and customs, the trade, commerce, &c. of the New States. The work is equally valuable to the politician, the geographer, and the merchant."—*Liverpool Courier*.

London: Longman, Rees, Orme, Brown, and Green; Grapel, Liverpool; and Oliver and Boyd, Edinburgh.

THE LAST HOURS OF EMINENT

CHRISTIANS, from the Commencement of the Christian Era to the Death of George III. Compiled from the best Authorities, and chronologically arranged.

By the Rev. HENRY CLISOLD, M.A.
 Minister of Stockwell Chapel, Lambeth.

"This work is designed to present the most illustrious examples of devotion, trust, humility, fortitude, and patience, together with the most striking instances of the brevity and uncertainty of human life."
 Printed for C., J., & G., and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and sold by Hatchard and Son, Piccadilly.

THE FOREIGN REVIEW, No. IX.

The First Four Volumes of this very interesting and popular Journal may be had complete, price 2s. 6d. extra boards.

London: Black, Young, and Young, No. 5, Tavistock Street; Rosengau and Co.; and Whitaker and Co.

"The cause of English liberty has received sensible aid from the appearance at this moment of an admirable article upon the police system of England, in the ninth Number of the Foreign Review. It is the ablest article of the Number, which is itself, we think, the best of the series of this publication, and that is certainly second to none of the publications of its class, if not the very first amongst them."—*Standard*.

THE COURT JOURNAL.

The attention of the public, and of the fashionable world in particular, is respectfully invited towards this new and popular weekly journal, the whole impression of which is stamped, subscribers may receive and transmit it to their friends, postage free, throughout all parts of the kingdom.

The occupations, engagements, and amusements of the higher classes of society had long required a record, and they have found it in the Court Journal. The public and private habits of royal and noble life, those habits which give the tone to manners throughout the empire, are here depicted with a freshness and accuracy hitherto unattempted. But the Court Journal presents itself as the companion not merely of the drawing-room and the boudoir, but of the breakfast-table and the study. Being useful to all other literary journals, published on stamped paper, it is enabled to supply in addition to its leading and peculiar features, information on every topic of passing interest, thus rendering the Court Journal a weekly newspaper of an entirely new, important, and valuable nature.

As a medium for advertisements connected with literature, works of art and fashion, the advantages possessed by this paper must be too apparent to require remark.

The Court Journal is published every Saturday Morning, on a handsome sheet of sixteen quarto pages, containing 48 columns, price 10d. and may be received on Sunday in all parts of the country, postage free.

Published for Henry Colburn and Richard Bentley, by W. Thomas, at the Office, 19, Catherine Street, Strand.

Orders are received by all Booksellers and News-vendors, and by the Clerks of the Road, and Commendations for the Editor are requested to be sent to the Office.

THE UNITED SERVICE JOURNAL

and NAVAL and MILITARY MAGAZINE for December, price 6d.

Bennett, who fell into the Power of the Burmese during the late War.—On Distances at Sea, by Lieutenant H. Baper, R.N.—Bacon Jomilly's Theory of the World's Origin.—Evans on the Practicability of an Invasion of British India.—Lieutenant Rose's Travels in Southern Africa.—The Life of a Midshipman.—First Invasion of Ireland. Correspondence: United Service Museum.—Indian Army.—Military Education.—Sale of Commissions in the Navy.—Reservists of the Staff.—Editor's Portfolio.—General Orders.—Circulars.—Court-Martial, &c. &c.

Henry Colburn and Richard Bentley, 5, New Burlington Street.

THE EXCLUSIVES!!!

"The 'Exclusives' will excite more attention than any work of a similar class has done since 'Tremaine.' It will do this for several reasons: partly from its name, which moves from the curiosity which has been raised regarding the alleged eminent status of its writer—but most of all from its intrinsic qualities and characteristics. A hurried glance at these latter and only legitimate sources of public attention, in a literary point of view, is all that we can give this week. We may find more than one occasion and cause for re-reading the volume, however. The Editor's 'Preface' is emphatically, and exclusively, a picture of fashionable life in the present day: we will add, in unqualified and unhesitating terms, that it is, generally speaking, as true as the truest, the fairest, the most intelligible, and the most comprehensive picture of that life, which has yet been presented to the world. Moreover, though apparently stuck off in a hurried and unpremeditated manner, it is written with great general ability—with a fine sense of the mixed motives of human action, so far as its observations extend—with a sufficient insight into the leading and permanent passions and affections of the heart—with a perfect knowledge of the society in which all its scenes are played—and finally, with an air of infinite superiority over all the matters which compose those scenes, and the persons who frequent them. The inference to be drawn from the foregoing is, that the writer of the 'Exclusives,' wherever he is, or what he is, is not at present living in the society here so ably and vividly depicted: either occupying that one station which alone it shows it, or whether excluded from it by any other causes, is what we do not pretend to have the means of positively deciding, and therefore shall not dwell on further. It presents us with an aspect of the world, no other modern novelist has yet dared to put forth."—*Court*

Henry Colburn and Richard Bentley, 5, New Burlington Street.

The French Language self-taught.
 In 8vo. price 18s. the 4th edition, thoroughly revised and corrected.

A GUIDE TO THE FRENCH LANGUAGE,

especially devised for Persons who wish to study the Elements of that Language with the least possible assistance of a Teacher.

By J. P. LE BRETON.

London: Printed for Baldwin and Cradock.

Also, in 8vo. price 1s.

A Key to the Exercises in the above Work, by means of which any person of a mature understanding may acquire the Elements of the French Language practically, as surely as if a professed Teacher were sitting by his side; and, with a very superficial Knowledge of it may teach it to others. Directions are given in the Key to Parents how to instruct their children in such Languages, who wish to instruct their children with the assistance of this Book, how they must proceed.

A valuable Christmas Present.
With various Illustrations, price 8s. 6d. lettered,
THE BRITISH NATURALIST; OR,
Sketches of the more interesting Productions of Britain and the surrounding Sea, in the Scenes which they inhabit; and with relation to the general economy of Nature, and the wisdom and power of its Author.

Published by Whitaker, Treacher, and Co. Ave Maria Lane.
"This is a very uncommon book: rich in vivid pictures of nature, portrayed by a glowing pencil; and rich, even to exuberance, in vigorous language. We look upon it as a very uncommon book indeed, upon such a subject. It is really more readable and interesting to what are called general readers; and to a mere literary man, who confines his pursuits to belles-lettres productions, it is almost the only book of the sort which could be named. The author's fine descriptions of the wild cat, the otter, the salmon, the herring, the lapwing, &c. are superior to any thing of the same kind with which we have ever met."—*Literary Review.*

"Is peculiar felicity, that there is scarcely any class of readers, beyond mere childhood, who may not find in its pages delightful occupation."—*Monthly Review.*

"We do not know a better pocket companion for the lover of the lakes and ocean, of mountains and rivers, who may be inclined to ramble among the never-tiring beauties of nature, and look through her up to her Creator."—*New Monthly Magazine.*

"We must speak cordially in its praise."—*Literary Gazette.*
See also the *Atlas, Court Journal, La Belle Assemblée, &c.*

Price 8s. 6d. in boards.
THE WHOLE DUTY OF CONSTABLES;
containing Instructions to High Constables, Petty Constables, Headboroughs, Tythingmen, &c. in the several particulars of their Office.

By a late ACTING MAGISTRATE of the County of Norfolk.
4th edition, revised and enlarged, with an Appendix, containing (besides Mr. Peel's Six Acts for Amending the Criminal Laws) those on the same important subject called the "Laws downes Acts," relative to Offences against the Person, Summary Convictions, Law of Evidence; with several others passed in the years 1826 and 1829, including that for the better regulation of Divisions in the several Counties of England and Wales, and of the Duties of High Constables, &c. in consequence hereof.
Sold by Poole and Edwards, Ave Maria Lane; and Baldwin and Cradock, Paternoster Row, London; Matchett, Stevenson, and Co. Norwich; Mosley and Son, Derby; and all other Booksellers.

"The pamphlet before us is a very well-arranged and ample compendium of the business of constables, in as far as possible cases in which they may be called on to interfere."—*Literary Gazette*, Aug. 18, 1829.

Chiswick Press edition.

Views of the different Colleges, engraved for the Cambridge Almanack, may be had, price 2s. 6d. each.

In 2 vols. post 8vo. 8s. 6d.
STORIES OF WATERLOO.

"An immense popularity may be expected for these volumes; nothing in its way could be better than the design of the work. There is no event in the records of either ancient or modern history so pregnant with the fate of nations and of individuals as the battle of Waterloo. Among the numerous hosts engaged, there was scarcely a man who did not feel a more than ordinary solicitude as to the catastrophe. In chronicling this grand drama, history can only recount the main incidents, while by far the most interesting portions, namely, the detail of private achievement, of private feeling, and of private suffering, is passed over, or assigned to the biographer or the novelist. The author before us unites these two qualifications, and has constructed a series of stories, of which it may not be too much to say, that they will, on account of their subject and their power of narration, be read and read again, like those famous legends to which the battles of Cressy and Agincourt have given immortality."—*Morning Paper.*
Henry Colburn and Richard Bentley, 8, New Burlington Street.

Price 8s. 6d. No. III. of the
LONDON UNIVERSITY MAGAZINE.
(To be continued monthly.)
This Number contains the Examination Papers for the Latin, Greek, Mathematical, Natural-Philosophical, and Law Classes.

SATURDAY, DECEMBER 19, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Tales of a Grandfather; being Stories from the History of Scotland. Third Series. 1830. Edinburgh, Cadell and Co.; London, Simpkin and Marshall; Dublin, Cumming.

WITH these three admirable little volumes is concluded a series of *historiettes* from the deeply interesting annals of Scotland, which will long remain one of the most charming productions to be put into the hands of the young—one of the most agreeable for the mature and informed. A beautiful prefatory letter to the author's grandson—full of wisdom, yet adapted to the intelligence of childhood—introduces this portion of the work, which embraces the period from the Union to the year 1760 (including both the rebellions of 1715 and 1746), and a brief retrospective glance at the alterations which were caused by these events in Scotland, to about "fifty years ago." Like the previous series, this is replete with curious anecdote, and full of affecting stories; though the state of our present Number only enables us to take the shortest notice of them. Indeed the following must suffice. Respecting the famous Porteous Mob, the account is remarkable:—

"The origin of the Porteous Mob continued long to exercise the curiosity of those by whom the event was remembered; and from the extraordinary mixture of prudence and audacity with which the purpose of the multitude had been conceived and executed, as well as the impenetrable secrecy with which the enterprise was carried through, the public were much inclined to suspect that there had been among its actors men of rank and character, far superior to that belonging to the multitude who were the ostensible agents. Broken and imperfect stories were told of men in the disguise of women and of common artisans, whose manner betrayed a sex and manners different from what their garb announced. Others laughed at these as unauthorised exaggerations, and contended that no class were so likely to frame or execute the plan for the murder of the police officer, as the populace to whom his official proceedings had rendered him obnoxious: and that the secrecy so wonderfully preserved on the occasion arose out of the constancy and fidelity which the Scottish people observe towards each other when engaged in a common cause. Nothing is, or probably ever will be, known with certainty on the subject; but it is understood that several young men left Scotland in apprehension of the strict scrutiny which was made into that night's proceedings; and in our grandfather's younger days, the voice of fame pointed out individuals, who, long absent from that country, had returned from the East and West Indies in improved circumstances, as persons who had fled abroad on account of the Porteous Mob. One story of the origin of the conspiracy was stated to me with so much authority, and seemed in itself so simple and satisfactory, that although the degree of proof, upon investigation, fell far short of what was

necessary as full evidence, I cannot help considering it as the most probable account of the mysterious affair. A man, who long bore an excellent character, and filled a place of some trust as forester and carpenter to a gentleman of fortune in Fife, was affirmed to have made a confession on his death-bed, that he had been not only one of the actors in the hanging of Porteous, but one of the secret few by whom the deed was schemed and set on foot. Twelve persons of the village of Path-head—so this man's narrative was said to proceed—resolved that Porteous should die, to atone for the life of Wilson, with whom many of them had been connected by the ties of friendship and joint adventure in illicit trade, and for the death of those shot at the execution. This vengeful band crossed the Forth by different ferries, and met together at a solitary place near the city, where they distributed the party which were to act in the business they had in hand; and giving a beginning to the enterprise, soon saw it undertaken by the populace of the city, whose minds were precisely in that state of irritability which disposed them to follow the example of a few desperate men. According to this account, most of the original devisers of the scheme fled to foreign parts, the surprise of the usual authorities having occasioned some days to pass over ere the investigations of the affair were commenced. On making inquiry of the surviving family of this old man, they were found disposed to treat the rumoured confession as a fiction, and to allege that, although he was of an age which seemed to support the story, and had gone abroad shortly after the Porteous Mob, yet he had never acknowledged any accession to it, but, on the contrary, maintained his innocence when taxed, as he sometimes was, with having a concern in the affair. The report, however, though probably untrue in many of its circumstances, yet seems to give a very probable account of the origin of the riot in the vindictive purpose of a few resolute men, whose example was quickly followed by the multitude, already in a state of mind to catch fire from the slightest spark."

We copy a small portion of the detail of the battle of Sheriffmuir.

"A gentleman, named MacLean, who lived to a great age, thus described the attack of his own tribe; and there can be no doubt that the general onset was made under similar circumstances. When his clan was drawn up in deep order, the best born, bravest, and best armed of the warriors in front, Sir John MacLean placed himself at their head, and said, with a loud voice, 'Gentlemen, this is a day we have long wished to see. Yonder stands MacCallanmore for King George—here stands MacLean for King James. God bless MacLean and King James!—Charge, gentlemen!' The clan then muttered a very brief prayer, fixed the bonnet firm on the head, stripped off their plaids, which then comprehended the fillibeg also, and rushed on the enemy, firing their fuses irregularly, then dropping them, and drawing their swords, and uniting in one wild

yell, when they mingled among the bayonets. The regular troops on the left received this fierce onset of the mountaineers with a heavy fire, which did considerable execution. Among others who dropped was the gallant young chief of Clan Ranald, mortally wounded. His fall checked for an instant the impetuosity of his followers, when Glengarry, so often mentioned, started from the ranks, waved his bonnet around his head, exclaiming, 'Revenge, revenge! to-day for revenge, and to-morrow for mourning!' The Highlanders, resuming the fury of their attack, mingled with the regulars, forced their line in every direction, broke through them and dispersed them, making great slaughter among men less active than themselves, and loaded with an unwieldy musket, which in individual or irregular strife has scarce ever been found a match for the broadsword. The extreme left of Argyle's army was thus routed with considerable slaughter, for the Highlanders gave no quarter. * * *

"The body of the gallant young Earl of Strathmore was found on the field, watched by a faithful old domestic, who, being asked the name of the person whose body he waited upon with so much care, made this striking reply, 'He was a man yesterday.'"

At the surrender of Preston—

"On laying down their arms, the unhappy garrison were enclosed in one of the churches and treated with considerable rigour, being stripped and ill-used by the soldiery.* About fourteen hundred men, of all sorts, were included in the surrender; amongst whom there were about two hundred domestic servants, followers of the gentlemen who had assumed arms—about three hundred gentlemen volunteers; the rest consisting of Brigadier MacIntosh's command of Highlanders. Six of the prisoners were condemned to be shot by martial law, as holding commissions under the government against which they had borne arms. Lord Charles Murray obtained a reprieve with difficulty, through the interest of his friends. Little mercy was shewn to the misguided private men, whose sole offence was having complied with what was in their eyes a paramount duty—the obedience to their chiefs. Very many underwent the fate which made them so unwilling to enter England, namely, that of banishment to the plantations in America.

* "The laced clothes of the gentlemen was the temptation to this outrage. The prisoners were obliged to strip the pews of their baize linings, in order to apply the cloth to the purpose of decent covering. A family tradition runs thus:—A gentleman, who fought as a trooper in one of the Scottish squadrons, was shot through the body at the barricade. He was conceived to be mortally wounded, and lay stretched in a pew in the church, an affectionate comrade supporting his head, and expecting every moment to receive his last sigh. After much sickness, the wounded man's stomach is said to have relieved itself by discharging a piece of his scarlet waistcoat, which the ball had carried into his body. The assistant, much amazed at such a phenomenon, being also one of that class of men who cannot forbear a jest, even in the most melancholy circumstances, observed—'Heigh, Walter, I am fain to see you have a stock of braid cloth in your bowels; and since it is so, I wish you would exert yourself again, and bring up as much as would make a pair of breeks—for I am in a mickle need o' them.' The wounded man afterwards recovered."

The prisoners of most note were sent up to London, into which they were introduced in a kind of procession, which did less dishonour to the sufferers than to the mean minds who planned and enjoyed such an ignoble triumph. By way of balancing the influence of the Tory mob, whose violences in burning chapels, &c. had been of a formidable and highly criminal character, plans had been adopted by government to excite and maintain a rival spirit of tumult among such of the vulgar as were called, or called themselves, the Low Church party. Party factions often turn upon the most frivolous badges of distinction. As the Tories had affected a particular passion for ale, as a national and truly English potation, their parliamentary associations taking the title of the October and the March Clubs,—so, in the spirit of opposition, the Whigs of the lower rank patronised beer (distinguished, according to Dr. Johnson, from ale by being either older or smaller); and mug-houses were established, held by landlords of orthodox Whig principles, where this protestant and revolutionary liquor was distributed in liberal quantities; and they speedily were thronged by a set of customers whose fists and sticks were as prompt to assault the admirers of High Church and Ormond, as the Tories were ready to defend them. It was for the gratification of the frequenters of these mug-houses, as they were called, that the entrance of the Preston prisoners into London was graced with the mock honours of a triumphal procession. The prisoners, most of them men of birth and education, were, on approaching the capital, all pinioned with cords like the vilest criminals. This ceremony they underwent at Barnet. At Highgate they were met by a large detachment of horse grenadiers and foot guards, preceded by a body of citizens decently dressed, who shouted to give example to the mob. Halters were put upon the horses ridden by the prisoners, and each man's horse was led by a private soldier. Forster, a man of high family, and still member of parliament for Northumberland, was exposed in the same manner as the rest. A large mob of the patrons of the mug-houses attended on the occasion, beating upon warming-pans (in allusion to the vulgar account of the birth of the Chevalier de St. George); and the prisoners, with all sort of scurrilous abuse and insult, were led through the streets of the city in this species of unworthy triumph, and deposited in the jails of Newgate, the Marshalsea, and other prisons in the metropolis. In consequence of this sudden increase of tenants, a most extraordinary change took place in the discipline of these melancholy abodes. When the High Church party in London began to recover the astonishment with which they had witnessed the suppression of the insurrection, they could not look back with much satisfaction on their own passive behaviour during the contest, if it could be called one,—and now endeavoured to make up for it by liberally supplying the prisoners, whom they regarded as martyrs in their cause, with money and provisions, in which wine was not forgotten. The fair sex are always disposed to be compassionate, and certainly were not least so in this case, where the objects of pity were many of them gallant young cavaliers, sufferers in a cause which they had been taught to consider as sacred. The consequence was, that the prisons overflowed with wine and good cheer, and the younger and more thoughtless part of the inmates turned to revelling and drowning in liquor all more serious thoughts

of their situation; so that even Lord Derwentwater himself said of his followers, that they were fitter inhabitants for Bridewell than a state prison. Money, it is said, circulated so plentifully among them, that when it was difficult to obtain silver for a guinea in the streets, nothing was so easy as to find change, whether of gold or silver, in the jail. A handsome, high-spirited young Highland gentleman, whom the pamphlets of the day call Bottair (one of the family of Butter in Athole), made such an impression on the fair visitors who came to minister to the wants of the Jacobite captives, that some reputations were put in peril by the excess of their attentions to this favourite object of compassion. When such a golden shower descends on a prison, the jailor generally secures to himself the largest share of it; and those prisoners who desired separate beds, or the slightest accommodation in point of lodging, had to purchase them at a rate which would have paid for many years the rent of the best houses in St. James's Square or Piccadilly. Dungeons, the names of which indicate their gloomy character, as the Lion's Den, the Middle Dark, and the like, were rented at the same extravagant prices, and were not only filled with prisoners, but abounded with good cheer. These riotous scenes went on the more gaily, that almost all had nursed a hope that their having surrendered at discretion would be admitted as a protection for their lives. But when numerous bills of high treason were found against them, escape from prison began to be thought of, which the command of money, and the countenance of friends without doors, as well as the general structure of the jails, rendered more easy than could have been expected. Thus, on the 10th of April, 1716, Thomas Forster escaped from Newgate by means of false keys, and, having all things prepared, got safely to France. On the 10th of May, Brigadier MacIntosh, whom we have so often mentioned, with fourteen other gentlemen, chiefly Scottish, took an opportunity to escape in the following manner:—The brigadier having found means to rid himself of his irons, and coming down stairs about eleven at night, he placed himself close by the door of the jail; and as it was opened to admit a servant at that time of night (no favourable example of prison discipline), he knocked down the jailor, and made his escape with his companions, some of whom were retaken in the streets, from not knowing whither to fly. Among the fugitives who broke prison with MacIntosh was Robert Hepburn of Keith, the same person in whose family befell the lamentable occurrence mentioned in the first volume. This gentleman had pinioned the arms of the turnkey by an effort of strength, and effected his escape into the open street without pursuit. But he was at a loss whither to fly, or where to find a friendly place of refuge. His wife and family were, he knew, in London; but how, in that great city, was he to discover them, especially as they most probably were residing there under feigned names? While he was agitated by this uncertainty, and fearful of making the least inquiry, even had he known in what words to express it, he saw at a window in the street an ancient piece of plate, called the Keith Tankard, which had long belonged to his family. He immediately conceived that his wife and children must be inhabitants of the lodgings,—and entering, without asking questions, was received in their arms. They knew of his purpose of escape, and took lodgings as near the jail as they could, that they

might afford him immediate refuge; but dared not give him any hint where they were, otherwise than by setting the well-known flagon where it might by good fortune catch his eye. He escaped to France."

The story alluded to is as follows:—

"Among other families of distinction in East Lothian, that of Mr. Hepburn of Keith was devotedly attached to the interests of the House of Stewart, and he determined to exert himself to the utmost in the approaching conflict. He had several sons, with whom, and his servants, he had determined to join a troop to be raised in East Lothian, and commanded by the Earl of Winton. This gentleman being much respected in the county, it was deemed of importance to prevent his shewing an example which was likely to be generally followed. For this purpose, Mr. Hepburn of Humbie, and Dr. Sinclair of Hermandston, resolved to lay the Laird of Keith under arrest, and proceeded towards his house with a party of the horse-militia, on the morning of the 8th of October, 1715, which happened to be the very morning that Keith had appointed to set forth on his campaign, having made all preparations on the preceding evening. The family had assembled for the last time at the breakfast-table, when it was observed that one of the young ladies looked more sad and disconsolate than even the departure of her father and brothers upon a distant and precarious expedition seemed to warrant at that period, when the fair sex were as enthusiastic in politics as the men. Miss Hepburn was easily induced to tell the cause of her fears. She had dreamed she saw her youngest brother, a youth of great hopes, and generally esteemed, shot by a man whose features were impressed on her recollection, and stretched dead on the floor of the room in which they were now assembled. The females of the family listened and argued—the men laughed, and turned the visionary into ridicule. The horses were saddled, and led out into the court-yard, when a mounted party was discovered advancing along the flat ground, in front of the mansion-house, called the Plain of Keith. The gate was shut; and when Dr. Sinclair, who was most active in the matter, had announced his purpose, and was asked for his warrant, he handed in at a window the commission of the Marquess of Tweeddale, Lord Lieutenant of the county. This Keith returned with contempt, and announced that he would stand on his defence. The party within mounted their horses, and sallied out, determined to make their way; and Keith, discharging a pistol in the air, charged the Doctor sword in hand; the militia then fired, and the youngest of the Hepburns was killed on the spot. The sister beheld the catastrophe from the windows; and, to the end of her life, persisted that the homicide had the features of the person whom she saw in her dream. The corpse was carried into the room where they had so lately breakfasted; and Keith, after having paid this heavy tax to the demon of civil war, rode off with the rest of his party to join the insurgents."

Such a work as this, and from such a source, needs no recommendation from us: its popularity is secure, and it will speedily be in every hand.

Annals of the Peninsular Campaigns, from 1808 to 1814. By the Author of "Cyril Thornton." 3 vols. 12mo. Blackwood, Edinburgh; Cadell, London.

MILITARY achievement has ever been a favourite theme with the poet and historian;

and never did a brighter moment beam on the sens of genius than when Fame, satiated with naval conquest, turned to uphold the somewhat obscured reputation of the British army, by the series of well-earned and unrivalled triumphs of the Peninsular war. Fifteen years have since passed away; and prolific as the press has undoubtedly been, the public appetite is still unpalated;—in fact, the subject offers a boundless novelty, as its details are placed in the various points of view suitable to the various composition of the community. History, with stately and dignified step, employs itself in an exact delineation of events, and luminous deductions therefrom, for the future guidance of the prince and legislator—the moralist describes, in faltering language, the scenes of carnage which ensued, but still gratefully acknowledges them as the forerunners of blessed peace—the soldier recounts, with military frankness and precision, the exploits he witnessed, the strategies and successful devices practised, and the bodily restraints and endurance to which all are subject who tread the bright but thorny path of his profession; and a boundless variety of romantic as well as tender incidents invite the song, as yet unsung. The nobly composed volumes of Dr. Southey have a place in every library of importance; Lieut.-Col. Napier's admirable exposition is, or ought to be, in the hands of every one who desires a name in arms; the poet who shall again immortalise these fields is perhaps yet unborn; while the work now before us remedies a deficiency which must ensure its success—that of providing the more general reader with a sufficient memorial, of lively composition, equally devoid of dry historical detail or military minutiae. The writer of these Annals was himself a minor actor in the glorious deeds he portrays; and although, from having recently commented upon the same subject, we cannot promise that our extracts will afford much of novelty to the reader; we yet feel that it would be too great injustice to the able author to withhold them—and accordingly we make the following selections:—

“While the country was thus torn by violent convulsion, Lisbon, the very seat and centre of the invader's power, was not tranquil. The fête of the Corpus Christi is one which had uniformly been celebrated in the capital with extraordinary pomp. On that day the whole population of the city, increased by large accessions from the surrounding country, were annually collected to witness the procession. Nothing could exceed its magnificence. The streets were strewn with flowers, the walls decorated with tapestry, and the balconies displayed all of beauty and splendour which the country could afford. On that solemn occasion not only the wealth of individuals, but the vast treasures of the church were displayed, to add pomp to the festival. The most prominent figure in the pageant was an image of St. George, glittering with jewels, mounted on a horse gorgeously caparisoned, and followed by a cavalcade of the royal household. Throngs of penitents and monks, duly marshalled in the procession, formed a train so numerous, as to occupy several hours in passing. The corporations of arts and trades, the senate, the tribunals, the councils, the regular troops, the generals, and the militia, followed in succession. Then came the consecrated Host, preceded by knights in their mantles, and covered by a splendid canopy, borne by the chief dignitaries of the church, in all the pomp and circumstance of canonical splendour. Last of all came the sovereign,

the princes of his family, and the grandees, on foot, without guards, and mixed, as it were, with the great body of the people. This festival Marshal Junot deemed it impolitic to abolish. He considered that any prohibition would probably be attributed to fear, and tend to increase the instability of the new government. On the day appointed, therefore, the procession took place, though shorn of its chief honours by the absence of the sovereign, in whose place Junot did not think it prudent to appear, and of the figure of St. George, whose dress had been carried off to Brazil. In all other circumstances the splendour of the pageant was undiminished. Cannon were fired from the castle in demonstration of respect, the streets were lined by the French troops, and the procession, in all wonted formality, had begun its progress, when, at the moment when the sacred Host was seen issuing from the church of St. Domingo, the crowds in the squares of the Commercio and the Rocio became vehemently agitated, and the commotion spread like wildfire through every street in the city. For this sudden perturbation there was no apparent cause. No symptom of hostility had been previously manifested, on the part either of the military or the people. But in a moment, from some unknown and, even now, inexplicable cause, the whole aspect of affairs was changed. Cries of terror arose among the multitude, and were instantly reverberated by many thousand voices. Some exclaimed, ‘There is an earthquake—the city is about to be destroyed;’ others, ‘The English are landed;’ but the greater number were influenced by the apprehension of a general massacre, and invoked their countrymen to resist bravely to the last. Among the vast multitudes which thronged the city, all was panic and confusion. Priests, nobles, penitents, and monks, in a moment deserted the procession, and, mingling amid the crowd, carried with them the remains of broken crucifixes and tapers, strewing the streets with the fragments of their torn vestments. The insignia of the festival were overthrown and trampled under foot. Multitudes, actuated by blind terror, encountered each other like opposing torrents, and obstructed all avenues of escape. The disorder pervaded all ranks. The prelate who bore the Host deserted the sacred incarnation, and, returning into the church, was found concealed behind a screen. All participated alike in the indefinite and pervading terror, and fled with tumultuous dismay. During the progress of this extraordinary convulsion Marshal Junot was in the Palace of the Inquisition. He immediately went to the church of St. Domingo, and endeavoured to rally the fugitive prelates and nobles who had fled to that sanctuary for protection. He perceived that it was most important that the procession should at all events take place, as the best means of allaying the apprehensions of the people. Without waiting to inquire into the causes of the disorder, he gave the strongest assurance that the French troops should afford protection from violence, and declared his intention of joining the *cortège*. The procession accordingly again set forth, and symptoms of disorder were again manifested. The ceremonies of the day, however, were at length concluded with decency and order. On the return of Junot to headquarters, amid throngs of people, a few voices saluted him with cheers,—the last he was ever destined to receive in Portugal.”

That *chef-d'œuvre* of a military master, the passage of the Douro, is thus described:—

“The reader must now be aware of the general state of affairs in the Peninsula when Sir Arthur Wellesley landed in Portugal. He at once perceived that the numerical superiority of the enemy was neutralised by the separation of their corps; and while the movements of Lapisse and Victor were cautious and hesitating, he determined, by a prompt and rapid advance, to attack Soult, and drive him from Oporto. This resolution was communicated to Cuesta, who was requested to content himself with keeping Victor in check, until the return of the British from Oporto, when the two armies might act in combination on the south of the Tagus. In pursuance of the project thus ably conceived, a division, commanded by Gen. Mackenzie, and a brigade of heavy cavalry under Gen. Fane, were left at Abrantes to watch the movements of Victor; and the rest of the army was put in motion on Coimbra. In that city, the whole British force was assembled on the fifth of May; and on the ninth it continued its advance. The division of Gen. Hill was directed to embark at Aveira for Ovar, in order to take the enemy in flank, and force them back from the Vouga; and Beresford, with a strong detachment, chiefly composed of Portuguese, moved upon Vizeu, to cut off the retreat of Soult by Amarante. The main body proceeded by the direct route; and on the tenth encountered the enemy's advanced posts, which were driven back. On the day following, two divisions, strongly posted on the heights above Grijon, were dislodged from their position, and pursued with success till nightfall, when the British army halted with their advance, on the heights beyond Cavalleros, about two leagues from the Douro. During the night the enemy continued their retreat. In the meanwhile, the object of Sir Arthur Wellesley in these movements could not be supposed to escape the penetration of Soult. He saw the danger of being speedily enclosed in the north of Portugal; and determined to extricate himself from the increasing perils of his position, by evacuating the country. Measures were accordingly adopted for this purpose. Preparations were instantly set on foot for removing the sick and the baggage; and having destroyed the pontoon-bridge across the Douro, and given orders that all the boats should be brought to the right bank of the river, he imagined himself secure from immediate attack. He imagined, too, that Sir Arthur Wellesley would avail himself of his maritime resources, and embarking his troops, endeavour to effect a landing near the mouth of the Douro. This would have allowed time for the leisurely retreat of the army; and orders were despatched to Loison, requiring him to maintain his ground at Mezamfrio and Peza da Ragoa, in order to prevent the passage of the river being effected at either of these points. Had the calculations of Soult been realised, with regard to his enemy's intentions, no obstruction would have existed to his retreat into Galicia; or, by advancing on Beresford with his whole force, he might have crossed into Beira. But Sir Arthur Wellesley had bolder measures in contemplation. He determined at once to cross the river, and drive the enemy from Oporto. With this view, Gen. Murray was detached to Avintas, a ford about five miles higher up, where he was directed to cross the river with his brigade, and send down any boats which he might be able to procure. The brigade of Guards, under Gen. Sherbrooke, received orders to cross the ferry below the city at Villa Nova. The main body, under his own immediate command, were to attempt a pass-

age at the convent of St. Augustino da Serra, which occupies a height nearly opposite to the town. The Douro was at that spot nearly three hundred yards broad, extremely rapid, with considerable heights on the right bank, and a large unfinished building designed for the bishop's palace, which could be made serviceable as a post of defence by those who first landed, till sufficient numbers should have crossed the river to enable them to advance on the town. To protect the passage, several guns had been planted in the garden of the convent. By aid of the inhabitants, two boats had been procured from the opposite side of the river, and in these, three companies of the Buffs immediately passed the river. Other boats were speedily despatched by the zeal of the people; and the embarkation of the troops was rapidly continued. Gen. Paget was among the first detachment; he immediately took possession of the unfinished building already mentioned, and defended it with great gallantry, till the arrival of the forty-eighth, sixty-sixth, and a Portuguese battalion, when the contest was continued on more equal terms. Early in the engagement General Paget lost an arm, and the command devolved on Gen. Hill, who was still warmly contesting the ground, when the brigade of Guards and the twenty-ninth regiment appeared on the enemy's right; and in the opposite direction the troops were seen approaching from Avintas. Under these circumstances, the enemy's columns fell back in confusion. The British charged up the streets of Oporto, making many prisoners, amid the most animated demonstrations of joyful welcome from the inhabitants. Handkerchiefs were waved from the balconies and windows—blessings were breathed on the brave deliverers of the city, mingled, on all hands, with shouts of joyful and triumphant greeting. Confusion and disorder had spread through the whole French army. The panic seemed even to increase when they gained the open country; and Major Harvey, with a single squadron of the fourteenth dragoons, charged through three battalions of French infantry, marching in a hollow road, and brought off many prisoners, without sustaining any considerable loss. Unfortunately, however, it was found impossible to take full advantage of the panic of the enemy, by continuing the pursuit. The army were without supplies of any kind; the rapidity of the advance from Coimbra having outstripped the most active exertions of the commissariat. The fatigue the troops had undergone rendered repose necessary; and the pursuit was, therefore, relinquished at the approach of evening. Had these obstacles not intervened, there can be little doubt that the whole army of Marshal Soult would have been destroyed. As it was, however, nothing could exceed the boldness and the brilliance of the operations of Sir Arthur Wellesley. The Douro had been passed in open day, in the very face of a powerful enemy. One of the ablest and most experienced of the French marshals had been taken by surprise, and his army driven from Oporto, with the loss of its sick and wounded, of a great part of its baggage, and of a considerable number of guns. In truth, the very boldness and danger of the attempt contributed to its success. British generals had acquired the reputation of being cautious, and averse from that daring policy which seeks great achievement through great hazard. So little, indeed, did the enemy contemplate even the possibility of Sir Arthur Wellesley attempting the passage of the Douro, that when a *chef de bataillon* gave notice that

the English were passing, his assertion was disregarded. Nor did Marshal Soult receive intelligence of the event, till General Foy, who was severely wounded in the action, from the height opposite to the convent, observed the troops actually crossing, and the Portuguese making signals to them from the walls. Never was so complete a victory obtained at a smaller expense of life on the part of the victors. The loss of the English army amounted only to twenty-three men killed, and ninety-eight wounded."

The strictures on Sir John Moore appear scarcely to be called for; and as respects his personal staff remonstrating with him on his determination to retreat, it was composed of officers very unlikely to be betrayed into such a deviation from the strict principles of military subordination. Such as attribute to the general the disorganisation and irregularities of the army in its retreat to Corunna, we may as well remind of the Duke of Wellington's descriptive letter of the disorders which ensued on the retreat from Burgos,—yet no one has ventured to impugn him as the cause.*

There are some trifling inaccuracies and blemishes in the volumes; such as the mention of Charles the Fourth ending his days at Compeigne, when, in fact, he died at Rome in 1819; and the following passage relative to the state of public feeling at Madrid,—of which, should the work go to a second edition, we, in the name of good taste, court the omission.

"The spirit of loyalty had penetrated even into the mad houses; and lunatics rushed forth into the street to assassinate the enemies of their country."

We now consign these volumes to the public, with much admiration for their merit, and every good wish for their success.

Chemical Fragments. By Henry Bingley, M.R.I. 12mo. pp. 55. London, 1829. J. M'Cormick.

WE who have stood up for the poetry of our times, and have maintained, against all comers, that the cant about the extinction of the poetic spirit was only the false repetition of the common-place common to every period,—we are delighted with the new and pithy proof here afforded by Mr. H. Bingley, M.R.I., that our premises were correct, and our conclusions just. But why talk we of poetry alone? as if his unrivalled inspirations and lucubrations did not also combine the most profound knowledge of science—as if from the laboratory of his heated brain did not issue strains of as high chemical as poetical attraction—as if his crystallisations were not the types of his more brilliant composition—as if his caloric were not above all critical retort—or as if there were any incoherency in his cohesions. Sublime bard! M.R.I.! minister of song and science! we owe thee much: much for what thou hast done, and more for the promise that thy work is "to be continued"! But to assume a regular form.

It having occurred to Mr. Bingley, as is mentioned in a preface, dated "Royal Mint, August 1829," that "the elements of chymistry would admit of being put in a shape that might be more attractive to those just entering upon them than their ordinary prose form," he has, with a genius peculiarly his

* When we wrote the above paragraph, we had not observed the Note at the end of the second volume, which, on the high authority of Colonel Napier, negatives the fact we had questioned: and the ensuing mistake relative to the death of Charles IV. at Compeigne, instead of at Rome, we have since ascertained has arisen from following Southey, who had fallen into the same error.—Ed.

own, evaporated them through the furnace of his mind, and reproduced them in this their *extra-ordinary* shape—first of all, as in duty, invoking the Muse:

"Inspiring Muse, assist, I pray,
And further my design,
The humble tribute of a lay
To offer at thy shrine.
That noble science I would sing,
In all its various parts,
From which our manufactures spring—
The fountain-head of arts.
O Chymistry! can I recount,
Can I thy works declare,
Of power and might, which in amount
Innumerable are?
On earth, in air, in sea, in sky,
We hear thy glorious name."

The last couplet is a flight far away above Faraday, inasmuch as that ingenious gentleman never heard the name of chymistry in either sea or sky; though on earth, and it may be said in air, he is one of the most intimate acquaintances of this

"Great analyst of Nature's laws,
And providence for man." (Bingley, p. 6.)

Our poetico-chemical and chemico-poetical author, having demonstrated that Tubal-Cain manufactured brass i' the olden day, proceeds to rate the sordid alchemists of later date for expecting the aid of the goddess in their selfish pursuits.

"To Chymistry they did apply,
Implored her friendly aid;
Assistance grant, O don't deny,
How can we else succeed?
And shall I now prolong my song,
To say with what contempt
Fair Science heard their impious tongue,
Their vain, their base attempt?
Know then, vain men, my aid I will
Never, I trust, impart,
But where sound sense and goodness fill
Th' intentions of the heart.
The weal of men, and not their bane,
'Twas e'er my wish to study,
And think ye now that I would fain
My reputation sully?"

This, perhaps, may, by the kind-hearted, be considered a little harsh on the part of the goddess, seeing that, to a letter, the alchemists were all-chymists; but if she had given them an inch, we suppose they would have taken an L.

Mr. Bingley, M.R.I., however, having disposed of these human gnomes, lets us into the secret of a right excellent laboratory.

"This room should high and lofty be,
Full twenty feet in length,
Its ventilation good and free,
And sixteen feet in breadth.
A furnace you should have of wind,
One for evaporating,
And that of use you'll likewise find,
Yclept the cupelling.
An apparatus there should be,
On no account forgot,
In rank and file receivers three,
'Tis Woulfe's, or is it not.
And now I sing do ye anon
Apartments less prepare
On smaller scale, to carry on
Precipitations there.
Where free from shaking and secure
Your glasses keep their station,
And where yourself need not endure
Heat or suffocation."

Upon the last point we cordially agree with our sensible bard (it is not always that poets possess sense), for we are firmly of opinion that a suffocated chymist would be of almost as little worth as an ordinary person whose soul had been exorcised out of him by the last hint of the Ordinary of Newgate, who (strangely, and, we think, rather profanely,) dismisses his patients from this world with a play upon words—"in the midst of life we are in death," he reads or prays, drops the signal, and away slips the unconscious wretch, losing the whole point of the too sacred joke. But, with so much of

other matter before us, we are criminal to digress. Part II. of Mr. Bingley, M.R.I.'s effusion treats of the great laws (not of the Old Bailey, but of Nature), viz. gravitation, cohesion, and attraction, in a style so deplorably original, that we lose all gravity, our thoughts are dissipated, and our wonder distracted.

"The force with which all bodies fly,

Attracted by another,
Is always regulated by
The quantity of matter.

The reason then you now see why
Earth so attractive is,
Dependant on and caused by
Its material greatness.

'Tis by attraction bodies two,
If on the water floating,
Approaching near, unite we view,
As on each other doating.

Attraction does upon the earth
In safety give us footing:
Suspend it once, 'twould not give birth
To ought like mirth or joking.

All particles of matter that
This universe comprise,
Suspend attraction, see in what
A whirlwind they would rise.

If e'er a solid undergo,
Whether from fire or friction,
Sufficient heat, cohesion you
Are hasting to destruction.

Oft will the little spheres that do
Compose a solid mass,
By heat distracted, hasten to
The liquid form embrace."

We have heard of embracing the yielding form, but to embrace a form altogether liquid is a sublimer pitch of poetry; and with it we may well close this clear and happy exposition of chymical affinities. Cohesion, indeed, seems to be a marriage ceremony:

"For now, suppose two atoms we
(In nature homogeneous)
Unite and join, do we not see
How they to adhere are anxious?
By this each solid mass is framed
From atoms most minute:
By force 'cohesion' they are tamed,
Nor dare its power dispute."

Crystallisation, on the other hand, strongly resembles courtship;

"Which doth suppose ere matter will
Unite to form a crystal,
It doth exist in spheres until
Attraction on them call.
When to the summons how they haste,
Contending to obey,
Nor time in hesitation waste,
Or loiter by the way."

and where, also, a good deal of nonsense is spoken—about

"The parallelopipedon,
(A spurious Anglicism,)
Octohedron, tetrahedron,
The hexahedral prism."

Or,

"Their names perchance familiar grown,
Include the tetrahedron,
The simplest prism, and well known
Parallelopipedon.
Yet some philosophers have thought
This theory incomplete,
Unless that too of spheres be taught,
A well-devised conceit."

What our M.R.I. says about heat seems very natural, though not so explicit as some of his other explanations.

"We all know what it is, we feel
Its nature surely—well,
I know no more, what an appeal
About a bagatelle."

Another of the stanzas, we confess, puzzles us much, but we trust our intelligent readers will comprehend its meaning.

"All solid bodies do not quite
By heat expand the same,
The liquids never think it right,
To do it were a shame."

Having dilated on this theme, our admired author thus concludes:—

"And when again we heat pursue,
May we ourselves be cool;

Not cold, for some warmth will ensue
When science gains the soul."

Sure are we that such a poet will win the heat, start when and where he listeth; and all that we can wish is, that when he next mounts his Pegasus to ride abroad—

May we be there to see.

Memoirs of Simon Bolivar, President Liberator of the Republic of Colombia, and of his principal Generals; comprising a Secret History of the Revolution, and of the Events which preceded it, to the present Time. By General H. L. V. Ducoudray Holstein, ex-chief of the Staff of the President Liberator. 2 vols. 12mo. London, 1830. Colburn and Bentley.

THIS is one of the works which may furnish *matériel* for history, and has a present interest as the record of those extraordinary scenes of ferocity and enterprise—of small beginnings leading to great endings—which characterise a revolution. Bolivar is depicted in no very favourable point of view; but, disappointed and aggrieved, Gen. Ducoudray belongs to one side of the question; and our own truth is not always so exact as we fancy it. We dare say Bolivar has, like most other heroes, his faults and his weaknesses; yet we doubt very much, that a mere coward, hypocrite, and libertine, could ever have done what he has, or maintained his difficult position. But Bolivar's historical estimate will be matter of much future debate—and to that we leave it. Moreover, the outline of the liberator's career being well known, we shall prefer one or two of the many interesting sketches given of his compatriots.

General Paez.—"Young Paez was raised amidst the herds of his fathers, and of course received no education at all. He took care of the herds, and could perform any operation used upon cattle or horses with great skill. He understood all the simples used in the cure of the disorders of cattle in that country, and knew how to apply them. He was a master at taming wild horses, and had great bodily strength and agility. He was also extremely patient of fatigue of every kind. When eighteen years old, he offered to make a journey from Aragua to the city of Barinas, where his mother was born. She had a lawsuit with her family, which had already lasted for several years. After some objections on the part of his parents, they consented to his taking the journey, in the hope that it would facilitate their lawsuit. He set off well mounted, armed, and supplied with money. On the road he met with two rogues whom he had known at Aragua, and who knew that he had money. They were lying in wait to rob him. He was not at all aware of their intentions, and, without suspicion, came near them. One of them attempted to seize his reins, but Paez, who had a vigorous horse, gave him the spur, and rode off at full speed, overthrowing both the robber and his horse. The robbers not being so well mounted, but knowing a foot-path shorter than the road, took that, and, upon the road at the end of it, again waylaid and endeavoured to seize him. When Paez found that all his entreaties were vain, he suddenly killed one of the robbers on the spot; the other fled, neither of them being armed. Being large, well formed, supple, vigorous, and brave, he became known for these qualities; and the affair of the robbers being learned in the neighbourhood, he became greatly regarded on account of it, and his name famous. On the breaking out of the revolution of Caracas,

* Any sentence will shew that the style of this work is very bad—not English!

in 1810, Paez declared himself in favour of freedom. The Llaneros placing great confidence in him, he easily persuaded them to join him; and they unanimously named him their chief.

"At the battle of Ortiz, in April 1818, where Bolivar commanded, Paez, with his cavalry, made several successful charges against the enemy, who, though inferior in number, were superior in discipline and skill to Bolivar. The general-in-chief had so entangled matters, and confounded the line, that his infantry were beaten and nearly destroyed. On this occasion Paez reproached him personally with great freedom and severity. At Bolivar's request, Paez covered the retreat, and made one or two charges, which saved the remnant of the infantry from destruction. Soon after the last charge, which he led himself, he retired on one side, and having dismounted, was seized with a fit, and lay upon the ground, foaming at the mouth. Colonel English, who related the circumstance to me, was present. He went up to Paez, but was warned by some of his people not to touch him. 'He will soon be well,' said they; 'he is often so, and none of us dare touch him until he is perfectly recovered.' Col. English, however, approached, and having sprinkled some water in his face, and forced a little down his throat, he soon recovered; and coming to his recollection, he thanked him cordially, saying, that he was a little overcome by the fatigue of the day, having with his lance and his own arm killed thirty-nine of the enemy. He said he felt his illness coming on as he was running the fortieth through the body. The bloody lance lay by his side, and he presented it to Colonel English as a memorial of his friendship and affection. Paez soon recovered and joined his legion: and when Col. English departed, he was presented by him with three very fine horses from his own stud. After the refusal of General Morillo to give quarter, Paez was never known to spare the life of a prisoner."

[An ancient story is here repeated as new, about Paez racing a prisoner first on one horse and then on another, overtaking and slaying him. We wonder at such silly repetitions.]

Juan Bautista Arismendi is one of those men who are said to form themselves, and who become fit for the station they occupy in the world by the force of genius and natural ability. He possesses a natural tact or disposition, which no education, though it may direct it, can ever give. From his youth he was devoted to hunting and fishing. The first formed his *coup d'œil*, and taught him stratagem: both hardened his body, by exercise and privation. His figure is broad, strong, and about five feet two inches high; his complexion is tawny and sun-burnt; his hair is yellow, his eyes are small and piercing, and he is probably the most active chieftain in Colombia. He has received no education, and can scarcely read or write. His penetrating genius, and his insinuating manners, advanced him in the army; and when Bolivar created himself dictator, he appointed Colonel Arismendi governor of the capital, Caracas.

"In March, 1815, General Morillo's mighty expedition arrived from Cadiz, at the island of Margarita, on the same day with that of General Morales, from Guiría. Arismendi and the inhabitants of Margarita saw the impossibility of resisting this united force, and therefore accepted the capitulation offered them by Morillo. It was clearly stated in the articles of capitulation, that none of the inhabitants should be molested for their political

opinions. In direct violation of this stipulation, numbers of the most respectable inhabitants were secretly arrested in the night. Arismendy himself found means to escape, and conceal himself in the mountains. Morillo offered a great reward to have him taken and delivered up to him; and strict search was every where made for him, but in vain. As he was perfectly acquainted with all the foot-passes in the woods and mountains, and as the inhabitants were devotedly attached to him, he soon succeeded in uniting about fifty of the bravest of them, who determined to drive the Spaniards from the island, or die. He lived with them some time upon roots and wild fruits, and the produce of hunting. He animated their spirits by his conversation and example to such a degree, that they promised to follow wherever he chose to lead. His first object was to procure arms and ammunition, of which his party was entirely destitute. Knowing all the Spanish outposts, he began by surprising one of them, held by a corporal and four men. Arismendy and twelve of his men, armed with clubs and long knives, surprised this post in the night, killed the five men, and took their arms and cartridges. Arismendy proceeded in this manner, killing the Spaniards in the night, and taking their arms and ammunition, for several months; and before any assistance could arrive, he and his men were again in the mountains. He continued in this manner to weaken the Spanish force, until he obtained not only a considerable quantity of arms and ammunition, but many recruits also. His successful enterprises reanimated the fallen spirit of the inhabitants. But, though already enabled to act upon a larger plan, and with effect, he was still in want of every thing, but principally of arms and ammunition. He had nothing to expect from the Main, because, after the flight of Bolivar from Cumana, the remaining patriot chieftains were reduced, like himself, to provide for their troops as they could. But the spirit of patriotism was now so strong in Margarita, that the women joined with their husbands, brothers, and friends, in their efforts to become again free. They voluntarily gave their jewellery, pearls, golden earrings, crosses, &c. for the support of the war, and made shirts and other necessary clothing for the troops. Arismendy was unanimously elected supreme chief. Some patriot clergymen offered golden and silver vases of the church, which they had taken the precaution to bury and secrete before the Spaniards landed. These valuables were secretly sent to St. Thomas's, to be exchanged for arms and warlike stores [or pocketed ?].

"During my stay in Margarita, General Arismendy, among many instances of the heroism of their women, related to me the following:—The wife of General Arismendy had a rich uncle, who had been many years settled at Trinidad, and had often pressed her to come and visit his family. At the end of 1815, she suggested to her husband the plan of going herself to Trinidad, to pay the long-desired visit, and also for a more important purpose, which was to solicit from her uncle, by way of loan, a large sum of money for the purpose of aiding the war: her husband refused his consent to her going, and pointed out the dangers to which she would be exposed in that time of war and trouble, particularly from the numerous cruising vessels of the enemy, which then covered the seas in almost every direction from Margarita. She persisted, however, in her purpose, and at length obtained his consent, and a proper commission from him for obtaining the loan. She was young, handsome,

and well educated; she embarked in a small schooner, without even a servant, and, when she went on board, was unknown to any one in the vessel. After sailing some days with a fair wind, the schooner was chased and overtaken by a Spanish privateer, and, though she sailed under Dutch colours, was sent into Porto Cabello. As soon as she arrived in that city, she was recognised by a number of persons as the wife of General Arismendy, and was immediately arrested, and put into a dark and damp dungeon in the citadel. Arismendy, who almost always put his prisoners to death, had spared three Spanish colonels and majors, whom he put into one of his forts, that they might serve him as hostages in case of need. The governor of Porto Cabello knew their situation. They were beloved by their superior officers; and the governor sent one of his officers to Arismendy's wife, with his word of honour, that she should be immediately set at liberty if she would write a line to her husband, and persuade him to release the three Spanish officers in exchange for her. She feared that her husband would be weak enough, as she expressed it, to consent to the proposal, and she positively refused to write. By the urgency of the governor, she understood the importance of these officers, and told him plainly that she would not write. After she had received a number of visits to the same purpose, the governor came himself, and endeavoured to persuade her, but in vain. They then threatened her; but she replied, laughing, that it would be cowardly to torment a defenceless woman, whose only crime was being the wife of a patriotic general. They next employed more rigorous treatment with regard to her living, but still treated her respectfully, and promised her immediate liberty if she would write to her husband to release the officers. At length she became vexed with their importunity, and told the officer who came to her, that if General Arismendy were informed of their cowardly treatment of her he would be as mad as a tiger, and would put to death thousands of Spaniards, men, women, and children,—all that might fall into his power: that, for her part, she was determined never to commit so weak and vile an act as they required of her; and that she would suffer a thousand deaths rather than attempt to persuade her husband to forget his duty. During three months she was treated with great barbarity; but she remained firm, and constantly gave the same answers. The Spaniards, at last, finding that nothing could alter her determination, permitted her to go to the island of Trinidad, fearing that if her husband should hear of her detention, he would do as she had predicted. Such was the wife of General Arismendy at the age of twenty-three years."

We must quote one little trait, for the benefit of our novel-loving readers; Bolivar's perusal of a novel being among his most heinous offences.

"As I entered his chamber familiarly, and without being announced, I found him lying in his hammock, as usual, and occupied in reading. When he saw me, he hastily placed his book under his pillow, and jumped out of the hammock to shake hands with me, but with a little more coolness than usual. Surprised to see Bolivar occupied in reading, which was unusual, and desirous to know with what book he was occupying himself, I came nearer to the hammock, and took the book out from under his pillow, asking him, what he was reading? He looked a little confused, and answered, 'He read it to recreate his mind a

little!' It was the *New Heloise*, by Jean Jacques Rousseau."

After all, this is as poor as it is an ill-written compilation; and those who have read the many preceding publications on the South American revolution will find little of novelty in it.

The Bengalee; or, Sketches of Society and Manners in the East. 12mo. pp. 466. London, 1829. Smith, Elder, and Co.

If a few instances, as it were to shame the industry on which we pique ourselves, had not before shewn that it is just possible, among the many volumes which crowd table, chair, and floor of our room, that one may now and then escape even the Argus eyes of an Editor, we might indeed marvel that this very amusing work should have been so long neglected; but "Better late than never" is an encouraging proverb,—and on the strength of it we now proceed to call our readers' attention to this entertaining collection of tales, sketches, &c. Written by a gentleman (a Captain Anderson, we believe) whose own residence in India well qualifies him to describe scenes in which he bore part, they are drawn with great animation and spirit; and we have been much pleased with the tale whence we derive the ensuing. A young officer, with a company of sepoy, is in attendance—a kind of honourable guardianship—on one of the native rajahs; and being gifted with the most oriental of imaginations, he allows it to be excited to the very climax by the rajah's daughter.

"On the second day after the arrival of the new guard at Doorgakhond, the whole camp was ordered to be held in readiness for marching. The maharajah, Omrut Rao, had determined to move at once; thus his followers and family were to break ground in the evening, and encamp in the open space before the grove of trees, so as to form into marching order, and be prepared for regular departure early on the ensuing morning. Towards night, however, it was announced to Lieut. Amoret that a person of consequence from the ex-peishwah was in attendance, desiring to communicate with the officer of the guard. On his admission, he apologised, in the name of his highness, for a change in his intentions; and mentioned that the illness of the young princess, who had lately joined them from the Dekhan, was the unfortunate and unavoidable cause. She had been attacked with fever on the way; and, in consequence of severe continued indisposition on her arrival at Benares, it had been found necessary to postpone her marriage with the maharajah's eldest son. A sudden relapse, which had just taken place, had induced his highness to countermand the march for the present. 'Give my respects to the maharajah,' said the lieutenant; 'I shall be ready with my escort whenever it is his highness's pleasure to command it. I hope the princess is not seriously indisposed.' 'She is said to suffer from increased fever,' replied the minister; 'but little was communicated to me on the subject.' 'Humph!' said the young officer; and, after a short pause, 'is she not betrothed to the young prince who was in attendance upon his highness this morning, when the guard saluted the maharajah in passing?' The confidential minister, Simuckjee, in the true diplomatic gravity of his sect, was not disposed to be more than necessarily communicative. He stiffly, but politely, answered, that she had been betrothed to the prince several years ago; but, as customary, had only lately been allowed to join

the family. Her illness had hitherto prevented all festivities, as well as the final ceremonies of the marriage. 'She is very beautiful, I have understood,' observed Amorett. 'So it is believed,' rejoined the minister. 'Is she so young as they describe her?' inquired the Lieutenant. 'I know not her highness's age,' was the brief reply. 'About twelve or thirteen, they tell me,' perseveringly continued the young man. 'Indeed!' was the still colder reply of the keen-looking little old gentleman, who was once famous in the Dekhan for his diplomacy and intrigues. 'But shall I retire from your presence? May I take leave?' said he, bending as in salutation, and apparent anxiety to withdraw. The wonted compliments ensued, and the minister ceremoniously left the tent. During the whole of the next night our hero did nothing but dream of the beautiful sick princess. Nor were his waking thoughts less devoted to her image. He fancied her, as a matter of course, to be lovely as the fevered imagination could suggest. She was young,—of this he had positively been assured;—she was beautiful,—he had heard that too, or fancied he had heard: it was a thing, of course, as much a matter of fact to his conviction as if he had seen her and dwelt for days in silent admiration of her loveliness. There were black eyes,—the large, languid, deep-fringed, sleepy, soul-breathing eyes of the hallowed daughters of Brahma; that pure transparency of skin, so peculiarly their own; the hair braided back upon her brow, that just peeped between the silvery folds of her muslin *doputtah*;—all this was as clearly and satisfactorily seen by him, and as much established to his mind's admiring belief, as if the maharajah himself had presented his betrothed daughter to his gaze. That very circumstance too,—*betrothed!* and her now sinking under fearful sickness, when at the very point of completing her vows! Nay, at this very moment also, the whole camp anxiously awaiting her recovery, and hanging, as it were, breathlessly on her very existence! There was something so touching, so interesting in the whole picture, that he dwelt on it till the little princess became as intensely an object of solicitude to the young English soldier, who had never seen her, as she could have been almost to her very friends, or the attendants immediately about her person."

As a medical adviser, he gains admission to her presence.

"At length the old woman re-appeared, and slowly and ceremoniously conducted the Englishman to the inner tent itself. The *cheek*, or bamboo screen of the doorway, was raised, and, entering, he found himself in the presence of the princess. She seemed to be scarcely emerging from childhood, but was decidedly beautiful,—fairer even than an Asiatic could be supposed to be, and with an air of command and dignity, which our hero had little anticipated so young a girl being in possession of. She was seated in the eastern manner on a chair, that is, she was entirely upon its seat; one of her feet being thrown easily, and not unelegantly, under the other, the knee of the latter being raised, gracefully enough for such a position, to the level of her waist. A rich silver worked Benares veil, or *doputtah*, of delicate and most beautiful manufacture, surrounded her head and person generally, though still betraying, through its texture, the contour of her lovely and gentle form, as well as her entire features, which were not a little improved by her large dark—yet, from her late indisposition—softened and

languishing eyes. She exhibited few signs of being ill, though, perhaps, the faint flushing of her cheek, which was occasioned by it, rather added to, than detracted from, her general loveliness. Amorett stood silent and abashed near the entrance, nor was he summoned to his recollection, until her highness, turning round, directed towards him a careless and indifferent glance of mere observation, and made some remark to her women in the Mah-rattah tongue, on the strange looks and appearance of the white-haired foreigner. Collecting himself, he approached her, and, with much show of ceremony, taking a chair near her, (which, by the by, they little thought of offering to him,) he commenced a conversation, by endeavouring to stammer forth some set inquiry as to her health. She simply replied by staring at him; and, on his affecting to take her hand, to feel its pulse, she at first withheld it, as in dislike of the liberty, or as objecting to be touched by him; and when, at last, she gave it with sovereign unconcern, she looked first at him, and then towards her suite, as if in cold wonderment of the scene before her. In vain he attempted, with studied gentleness, to make inquiry regarding her late indisposition;—she understood him not: and at length glancing carelessly, almost contemptuously, over his whole person, she desired one of her attendants to motion him to withdraw, as if perfectly satisfied with the exhibition of the stranger; in fact, adding, in a few plain words, that she had seen him long enough. It was now time for our poor astounded and mortified hero to look his astonishment:—he rose up and commenced to bow and explain his utter surprise; but she coldly made signal with her hand, of her permission for him to 'retire from the presence;' and then, turning round, commenced a conversation, possibly regarding his appearance, with the servants and suite around her. The fact became too humiliatingly apparent:—he had been introduced to the princess as a sight, as something to look at, and amuse her in her indisposition! In serious truth, the whole circumstance was simply this.—When Omrut Rao signified his permission for the English officer to be admitted, agreeably to his request, her highness's people and immediate suite, deeming it an indignity to their mistress, had brought about such admittance by asking the young betrothed, if she would not graciously please to look at a '*ghora admee*,' literally a *white man*! Thus the romantic, the impassioned, the poetic, the love-breathing Amorett had been walked into the zenanah, as a led bear or tame monkey, for the honourable amusement and mere gratification of curiosity of a young simple Mahrattah girl, of some thirteen or fourteen years of age!"

If the poetry had been entirely omitted, the volume would certainly have been improved; it is quite of the old school, where Flavius, Flirtillas, Hortensios, &c. were the abstract personifications of virtues and vices, and treated accordingly. There are many remarks we would recommend to the attention of juvenile Indians, as replete with all the sound sense of experience. The voyage and the arrival home are well sketched; and, altogether, the volume offers, we think, much varied amusement to its readers.

Captain Peter Dillon's Voyage.

(Second Notice.)

THE interest attached to this narrative of a voyage which ascertained the fate of La Pérouse will not be diminished by observing that

a relation by Captain Dourville, of a French expedition which merely followed in its wake, and confirmed its truth, was hailed with great enthusiasm at the last meeting of the Geographical Society at Paris, though the account did not even allude to the preceding adventure of the English vessel, nor to the liberality of the East India Company, which sent her out. The national contrast in this respect certainly does little credit to the Society's proceedings; for, to give honour where honour is due, is more honourable to the giver than to the receiver, and to withhold it is a paltry act and a disgrace. Nor can we in this instance offer the excuse of ignorance, since the French government had already acknowledged Captain Dillon's services, by bestowing the Cross of the Legion of Honour upon him, and a pension; though we believe the East India Company never had even thanks for the expense they bestowed upon an object so peculiarly French.

Having reluctantly made these remarks, we return to the volumes before us. In his voyage out, Captain Dillon had, as we noticed months ago, an inveterate quarrel with Dr. Tytler, the naturalist who accompanied him; of which dispute there is, perhaps, too much said for the reader; but when we reflect on the irritated feeling and sufferings of the writer, and the ill treatment he received from the authorities at Van Diemen's Land, we cannot blame him for his personal anxiety to set the affair in its true light. We, however, pass it over for the leading events of the voyage itself. On the 1st of July, 1827, the journal says,—

"At day-light stood in for the Bay of Islands, and at 9 A.M. anchored in five and a half fathoms of water in Cororarika Bay. The ship was surrounded, before letting go the anchor, by several canoes containing a number of natives. Being Sunday, we were all attired in our best. I spoke to them in the native language, but they did not recognise me for a long time. At length one of the young ladies called out most lustily, notwithstanding her delicate sex, '*Rangatheera no Palareekees*,'—'it is the Captain of the St. Patrick'; alluding to the ship which I commanded here last year. This recognition was re-echoed in every New Zealand throat, and nothing for some time was audible but the word '*Peter*,'—the name by which I am known by the South Sea Islanders. A man who appeared to be of some consequence in one of the canoes requested to be admitted on board; but this I refused, alleging as my reason that he had nothing to barter. He replied that he had. I repeated that I could see nothing; but he, pointing to the stern of his canoe, in which sat a pretty female about twelve years old, insisted, with a significant glance, that he had something better than a *buocka* (hog). I thanked him for his kind intentions, but replied that the ship was *tabooed* (i. e. sacred, or not to be approached,) until another anchor was let go, and the sails handed. Our conversation then assumed a political cast; in the course of which he informed me that he was the nephew of Boo Marray, a great and powerful chief, and the proprietor of this harbour, who, he said, my friends at the river Thames had killed about twelve months ago. He also said that Boo Marray's son had been killed, with about two hundred warriors, and that there was an expedition then fitting out against the Thames tribes, consisting of all the allied chiefs of the north, who were fully determined to exterminate the whole of the Bororoos and M'Marraghs. He then inquired where the two young men were that belonged to the Thames country,

whom I took from thence in the St. Patrick. Being informed that they were with me, he then said, 'You must deliver them up, that we may kill and eat them directly.' He was clothed in a war mat, with a mantle of dog-skins thrown loosely over his shoulders; his countenance at this moment assumed an aspect of the most savage ferocity, his eyes starting from their sockets with the intenseness of desire to seize on the innocent relatives of a people with whom he happened to be at war. It is hardly necessary to say, I replied to his cannibal request by telling him that the young men were under the protection of the British flag and guns, and should not be molested while on board—that they were *tabooed*. When on shore they might be treated conformably to the laws of New Zealand; but the intimation of his intentions regarding them would make me careful as to where they should land. I ordered up my friends Brian Boroo and Morgan M'Marragh, who went to the side of the vessel and commenced a conversation with their would-be devourer. The chief spoke to them with as much nonchalance as if he had never expressed a wish to pick their ribs or sup on their roasted chine,—a business that, if I might judge from the preparations his canoe exhibited, he seemed to have entertained some idea of prior to his putting off to the ship. He spoke in terms of the highest respect and praise of Brian's father, saying that two of Boo Marray's sons were taken in battle, with other men of consequence belonging to his tribe, and enlaved; that Brian's father shortly afterwards ordered them to be released, and furnished them with a canoe, in which they returned to their native district, and were now two days' march in the interior, but would pay him a visit the moment they heard that he had arrived. The ship being moored, this gentleman was allowed to come on board. Brian Boroo and he took each other by the hand, and gently inclined their heads until their noses touched. Their conversation then turned upon the heroic exploits of Brian's countrymen in the late wars. Several young ladies condescended to come on board, and the decks were shortly crowded with females, some of whom made a very genteel appearance, being dressed in English gowns, shirts, and petticoats; others were in their native costume. Without solicitation they proceeded voluntarily to amuse us with songs, dances, war whoops, and comic performances, in which they succeeded inimitably."

Captain Dillon excuses the custom of keeping the native women on board, by the plea that they are hostages for the safety of the sailors employed on shore. The account of the destruction of the Boyd and its crew is a harrowing tale; but as it has been already told in various ways, we shall prefer a lighter vein—the visit to the ship of a New Zealand priestess.

"This priestess (we are told) presented a noble figure. She appeared to be of a middle age; her complexion brunette, with sparkling black eyes; and her jet-black hair, which was of a considerable length, gently flowed in ringlets over her shoulders, waving gracefully in the air as she walked. She was attired in the state robes of her country, and conveyed to the mind a forcible idea of savage royalty. She had not been long seated before she remarked that the day was rather cold, and demanded if there was any rum on board, and if so, requested that some might be produced and given her. I told her that we had some, and ordered a decanter of brandy to be placed before her. After significantly eyeing it for some

time, and not liking the colour, she observed, 'This is not rum; I have never seen such as this before: let me have such rum as the whalers have on board.' With this request I immediately complied: she filled a tumbler nearly, and without hesitation quaffed it to the bottom. She then called for a segar, and having smoked a little, soon became very talkative. The person who mostly attracted her notice was an elderly gentleman named Richardson, the surgeon's assistant. She inquired of me who he was. I made answer that he was our doctor and priest. With this information she seemed much pleased, saying that she herself was a priestess and physician; and added, 'Will not my brother salute me according to the custom of New Zealand?' that is, gently to incline the head and touch noses. On the lady's request being communicated to Mr. Richardson, he with much gallantry complied; but, unfortunately, on stooping, his wig fell off, and exhibited a huge bald pate. It is more easy to conceive than express her highness's alarm and terror at this preternatural mode of salutation, for she verily believed that he had taken off his scalp by the aid of magic. She screamed most dreadfully, having for the first time seen a real proof of that skill in the black art, which she pretended that she was possessed of. All her female attendants joined in yelling most piteously on witnessing this phenomenon, and scampered with their mistress as speedily as they could out of the cuddy, screaming out in the native tongue, 'A witch! a wizard! an enchanter!' During the alarm, Mr. Richardson recovered his wig, and placed it on his head as before, to the no small astonishment of some of them who ventured to peep slyly at him during the process. After much trouble I succeeded in allaying the fears of her highness and suite, who once more ventured to sit down; not however without casting many a terrified glance at our priest and doctor, whom she did not require to salute her a second time. She with much anxiety inquired if it was not by the aid of magic that he had disencumbered himself of his hair, and wished to know if he could with equal facility take off his head, which I did not altogether deny. This intelligence caused her to eye our doctor with a degree of profound reverence, and she requested I would inform her how many evil spirits he had influence over, and if he could also shake the hair and skin from the back part as from the front of his head. I replied, that with regard to the number of spirits over which he had control, it was out of my power to inform her truly; but as regarded his hair, I assured her he could dismember himself from head to foot with the greatest facility. During our conversation, one of the nymphs attending on the priestess, a girl of about fourteen years, slyly approached Mr. Richardson, and mistaking a tuft of his natural hair for its movable substitute, determined, by a good pull, to ascertain if the virtue lay in the hair or in its owner; but the hair holding fast, she was compelled to make a precipitate retreat, lest the magician should metamorphose her into a hog,—those people believing in transmigration. This incident, no doubt, tended to confirm their belief in our priest's power, and caused a hearty laugh at the expense of the female casuist."

At her next visit the priestess was still more alarmed by a good sailor's joke. The draughtsman and officers had prevailed on the surgeon's assistant to "submit the bald part of his head to the draughtsman's art, who in a short time metamorphosed it in such a way, that had he been in ancient Greece or Rome during the

away of Pagan superstition, he might have obtained worshippers as the god Janus, who had in pity to men condescended to pay them a visit. His head presented the perfect appearance of an additional phis, most hideously portrayed on the bald part of the cranium. Vascathai, with her numerous female friends and attendants, being seated in the cuddy, begged as an especial favour that I would send for the magician, and prevail on him to shake off the hair and skin from his head, as he had done yesterday. She stated, as her reason for this request, that those to whom she had mentioned the circumstance would not believe that so wonderful a thing could be done by any man, and that she had brought the most incredulous with her to-day, that they might be eye-witnesses of the miracle. Mr. Richardson with much politeness consented to a repetition of it, and, approaching her highness, made a most graceful bow, and in a moment cast off his artificial hair, when, instead of an inoffensive bald pate, behold a horrible double face met the eyes of the astonished priestess and her companions. Dreadful indeed was the confusion which immediately succeeded this display of even super-magical power. The cuddy was in a moment cleared of the visitants, and the magician left in peaceable possession of the apartment. Infidelity itself was now convinced of his magical powers, and there was not a native unbeliever in the ship."

We now sail for the Mannicolas; but the pressure of new matter induces us to postpone this interesting subject to another paper.

Major Beamish's Translation of Bismarck's Cavalry Tactics, with Notes by the Translator. Second edition. 8vo. pp. 403. London, 1830. Ebers and Co.

THE principal novelty in this new edition of a valuable work is, a demonstration of the expediency of manœuvring by threes, which is made clear even to a civilian; since it does not appear to require much drilling to be sensible that a horse, which spins round on his centre,—an operation necessary, it seems, in wheeling by threes,—is more fatigued, and experiences greater difficulty in the movement, than in following the gradual sweep of a circle, as in wheeling (the substitution proposed by the translator) by subdivisions. As to the evils of "rear rank in front," another consequence, it appears, of manœuvring by threes, we are not sufficiently experienced in military matters to touch much upon it; we presume, however, that it is something like putting the cart before the horse. Altogether, we would again recommend this volume to the general as well as to the professional reader, as containing the history of all the different modes of cavalry warfare from the horsemen of Pharaoh down to the cuirassiers of Napoleon. The notes also present a detailed description of the arms, armour, and combats of the days of chivalry, authenticated *faits d'armes* of distinguished British regiments and the German legion, and entertaining anecdotes, &c.

Bertha's Visit to her Uncle in England. 3 vols. 18mo. London, 1830. J. Murray.

A GREAT variety of information is here pleasantly collected; and though we are very far from wishing to see any young ladies of our acquaintance either chymists, botanists, or geologists, yet such slight knowledge as, without dabbbling in science or hard words, does away with the prejudices of complete ignorance, may gracefully be made subjects of female acquire-

ment. We do not offer quotations, as most of the facts, &c. are such as must be matter of general knowledge to our older readers; but the following is new to us:

"My uncle mentioned yesterday, that in returning a few years ago from Berwick upon Tweed, he was much surprised, as night came on, at seeing two immense fires near Newcastle. Upon inquiring, he found that they were the small coal which does not readily sell, and is therefore separated by screens from the larger blocks. Prodigious heaps are thus formed at the mouths of the pits; and from the decomposition of the pyrites, they take fire, and continue to burn for years. One of these huge mounds was but a few miles from the road; it was said to cover twelve acres of ground, and to have been burning for eight years. As all that small coal might be made use of to produce coal gas, he says the legislature should interfere, to prevent such a shameful waste; for not less than one hundred thousand chaldrons are thus annually destroyed on the banks of the river Tyne; and nearly the same quantity on the Wear. Beneath these burning heaps, he found a bed of blackish scoria, which resembles basalt, and is used for mending the roads."

We must add, that *Bertha's Visit to her Uncle* will be a most agreeable Christmas present to our young friends.

A LETTER from Venice says,—"A manuscript of the famous jeweller Benvenuto Cellini, who was employed by Francis the First, and whose Memoirs, written in the naive style of Boccaccio, were printed some time since, has just been published and translated in extracts by Goëthe. The new MS. bears the title of *Racconti*, or tales, and was extracted by M. Gamba from a treatise on the art of jewellery; the manuscript of which is kept in the Marciana library at Venice. This treatise belonged to Cellini, and the artist has inserted various notes and observations on it, and has also added some lengthened remarks. These are what have been published; and they are evidently imbued with the spirit and originality which characterised this skilful jeweller."

"M. Gamba is also indebted to the libraries of Venice for the materials of a work he has just written, which is a collection of the letters of illustrious Venetians of the sixteenth century. It contains the letters of Cardinals Bembo, Contarini, Valiero, André Morosini, Navagero, Gradenigo, &c. M. Gamba has also published separately two speeches of the senator Georges Gradenigo, — one of which treats of experience in civil matters."

ORIGINAL CORRESPONDENCE.

Paris.

I BELIEVE it was an Irishman who said "he wished to die, for the pleasure of hearing his friends speak well of him;" and, indeed, nothing seems so much calculated to awaken feelings of benevolence in our neighbours, as the impossibility of our returning thanks for their eulogiums. Since Sunday last, physicians have pronounced the celebrated Madame de Genlis past recovery;—consequently there is not a virtue with which she is not endowed. Notwithstanding, however, this politeness on their parts, and the verdict of physicians, Madame de Genlis is still on this side of the Styx, and even threatened her panegyrist yesterday with a temporary convalescence. The Duke and Duchess of Orleans are amongst her sincerest friends; and have been incessant in

their attentions. Her adopted son is, however, the being who makes her cling to this world; and nothing can surpass her enthusiastic affection for him.

One of the favourite points of discussion at present is M. Jacotot's method of education. This emancipator of human intellects (as he is termed) has so many warm disciples, that to question the miraculous effects of being Jacototised, is attended with infinitely more danger than to deny the infallibility of his Holiness. The argument for him goes chiefly to prove, that to make a great man, we must turn education topsy-turvy,—begin where we end. This puts me in mind of a work, *sous presse*, for the benefit of young architects, in which the author recommends modern builders of houses, &c. to commence with the chimneys, and finish with the foundation.

ARTS AND SCIENCES.

THE ARUNDEL MANUSCRIPTS,

At the Royal Society.

[A great stir having been made respecting the exchange of these MSS. by the President and Council of the Royal Society for duplicates in the possession of the British Museum, we have much satisfaction in gratifying the curiosity of the public and of the learned by giving a brief account of their most valuable articles.]

THE manuscripts which form the Howard Arundel Collection at the Royal Society, exclusive of those in the oriental languages, amount to about five hundred and fifty. The more important consist of a Wyclif's Bible, in English, 2 vols. folio—the most superb manuscript of its kind known; a Greek Evangelistarium—an old and fine manuscript; a MS. of Pliny's Natural History, of the twelfth century; a Latin Psalter, with an interlinear Saxon version; a MS. of Thucydides; Froissart, in 3 vols.—fine, but mutilated; a good manuscript of the Homilies of St. Chrysostom, in Greek; a Greek Euclid; Gregory Nazianzen; and a Latin and Norman Psalter. There are numerous manuscripts of the classics, also, in the collection, several of them of a good age, but a few nearly coeval with the art of printing: among these are Suetonius; various works of Cicero; various works of Boethius; two Virgils; a MS. of the *Rei Rusticæ* Scriptores; Thucydides; Justin; Diodorus Siculus; Lucan; Martial; Claudian; Horace; Terence; Tacitus's Germany; Plautus; Macrobius; Juvenal and Persius; the Thebais of Statius; Hesiod; two Plays of Aristophanes; the Hecuba of Euripides; Priscian; Vitruvius; Isidorus; and Diogenes Laertius; with a MS. of the Catholicon of J. Januensis. The English Chronicles are also a numerous class; viz. two copies of Geoffrey of Monmouth; Giraldus Cambrensis; Whethamstede; Eadmer; William of Malmesbury; William of Junieges; Huntingdon and Trivet; Howden; Bede; Matthew of Westminster; the Polychronicon, &c. There are likewise various Abbey Registers and Rentals: as of Glastonbury, Newenham, the Hospital at Bury in Suffolk, St. Albans, Christ Church, Canterbury, and St. John, Colchester. In English poetry, several of Lydgate's works, Occleve, Hampole, and a metrical Capgrave. There is a second MS. of Euclid, with diagrams; a copy of the Greek Gospels; manuscripts of Eusebius and Theodoret; an old English manuscript of the Rule of the Monastery of Sion; and a very remarkable manuscript of Leonardo da Vinci. A sufficient list has been here enumerated to shew the good sense of the President and Council of the Royal Society in offering the collection, in

exchange for duplicate books of science, to the trustees of the British Museum. Where these manuscripts are at present placed, they are foreign to the objects of the Society which possesses them, and, comparatively speaking, accessible to but few persons; the reverse of this will be the case when deposited in the national collection. There they will be accessible to all who wish to consult them; whilst the Royal Society, without the outlay of money, will acquire many works of a rare or costly kind which they would be able by no other means to obtain.

LINNEAN SOCIETY.

AYLMER B. LAMBERT, Esq. in the chair.—A paper by Edward Foster, Esq. one of the Vice-Presidents of the Society, being an account of the *vicia angustifolia* of the English Flora, or wild tare, was read. In his communication the scientific author, in a very satisfactory manner, made it appear evident that two different species had heretofore been confounded together and classed under the same appellation: he proposes, as a distinguishing name, that of *vicia barbartii*. Nothing took place at this meeting requiring further notice.

UNITED SERVICE MUSEUM.

ON Wednesday last, a meeting composed chiefly of military officers took place, the object of which was the establishment of a Museum, to be more particularly devoted to models of scientific inventions connected with the naval and military services, but which is also to include collections in natural history, &c. His Majesty's approbation of the plan was communicated to the meeting; and a series of resolutions, with a subscription, were immediately entered upon for carrying it into effect.

GEOGRAPHICAL SOCIETY OF PARIS.

THIS Society held its public sitting on the 12th instant in the general council chamber of the Hotel de Ville, under the presidency of M. Hyde de Neuville. The chairman opened the business with an eloquent speech, in which he stated the objects of the society, and the benefits its exertions had already conferred on mankind, by the encouragement it held out to science and research. In contradiction to those writers who have called savage life the "life of nature," he contended that such an idea was both unphilosophical and unjust,—that the Creator had much higher objects in view for the human race than mere animal existence; and that the real "life of nature" was a life of civilisation. The orator then adverted to the pleasing fact, that the flags of Europe no longer traversed the ocean for the mere purpose of enthralling savages; to extend the blessings of education, and the habits of social life, was now the nobler object of her fleets, and especially of those of France. On the conclusion of the president's address, Captain Durville, of the Astrolabe, read some highly interesting extracts from the late voyage of that vessel round the world, performed under his command, particularly those parts of the journal relating to the discovery of the relics of the unfortunate expedition of La Pérouse, on the coasts of Vanicoro. The narrative of the sufferings endured by the crew of the Astrolabe, from the unhealthiness of the climate in those latitudes, where twenty-five of the men perished with frightful rapidity, produced a strong impression upon the audience, as did also the statements concerning the crew of La Bonsole, the companion vessel to that which carried La Pérouse himself. Captain

Durville thinks it not impossible but that some survivors of this double catastrophe may even yet be eventually discovered.

SUBMARINE CURRENTS.

It is well known that the Mediterranean is constantly receiving from the Atlantic, by the Straits of Gibraltar, an enormous quantity of water, which serves, with that which runs into it from rivers, to replace what it loses by evaporation. In this eternal renovation, evaporation carries away only fresh water, while the currents bring only salt water. How is it, therefore, that the composition of this sea does not in the least vary, and that it remains apparently the same as that of the ocean? The idea which naturally presents itself is, that the excess of salt is constantly carried away by a lower counter-current.

If this counter-current exists, as it carries away only a part of the water which has entered, since the other part is lost by evaporation, and as, nevertheless, it must carry away all the salt, it follows that an equal volume of it must contain much more salt than the upper current. But, hitherto, no sensible difference has been discovered between the superficial and the profound layers. On the contrary, their composition has appeared to be exactly the same. Dr. Marcet, who occupied himself so much in investigations of this nature, imagined that this absence of agreement between the results of observation and those of reasoning, might be owing to the circumstance of our not having yet penetrated to sufficiently great depths. He therefore requested Captain Smith, employed at that time in hydrographic labours in the Mediterranean, to obtain for him specimens taken at the greatest depths to which it was practicable to reach. Captain Smith cheerfully executed this commission; but in the mean while Dr. Marcet died, and the specimens were dispersed. Dr. Wollaston, however, succeeded in obtaining three of them. The first two did not exhibit in their composition any difference from the water of the common sea; but the third, taken from a greater depth (670 fathoms) contained a quantity of salt four times greater than the water of the surface. A counter-current thus composed, if we suppose it of the same depth and the same breadth as the upper current, need have only a fourth of the swiftness of that upper current constantly to carry away an equal quantity of salt, and thereby to prevent an increase of saltiness. The result would be the same, if, the swiftness being equal, the inferior current had only a fourth of the volume of the superior.—*Le Globe*.

AGRICULTURE.

THE following observations, by M. Albert, relative to the renewal of seed, are taken from the *Archiv der Deutschen Landwirtschaft*. It is generally believed among agriculturists, that the transport of seeds from one place to another has a great influence, not only upon the quantity, but upon the quality, of the produce; and that certain soils are better calculated for the culture of different plants than others. For this reason every country in Europe draws its flaxseed from Riga; and in some parts of Germany, oats are bought exclusively in certain villages. M. Albert has scrupulously examined the different opinions upon these subjects, and has come to the following conclusions. He has found it most advantageous to take the seed from the places where the mother plant had acquired the most perfect development. Thus, the best way is to sow corn upon a clay soil rather than upon a sandy one, as the grains

are larger, and weigh more. He says, that as the temperature of the soil has a greater influence upon the development of plants than the climate itself, the opinion that seeds should be taken exclusively either from the south or north is an erroneous one. Seeds will be larger or smaller in proportion to the leaves of the plants. Corn taken from a sandy soil will never grow better upon superior land than what the sandy soil has produced. The changing of seeds does not in itself make an alteration in the product; but it is to be attributed entirely to the influence of the soil, the climate, and the cultivation. When seed is sown upon different soils alternately, those characteristics will predominate which had developed themselves previously upon the plant which had been the longest in the same soil. The opinion that corn will always deteriorate if the seed be not changed, is a false one. The author remarks, that rye which has first been sowed upon a clay soil, and then upon a sandy one, should not be sown too soon, as the shoots are apt to be overturned. Large seeds are incontestably to be preferred to small ones. To prove this, M. Albert refers to the analogy in this respect with animals; and he concludes by stating, that whatever may be the influence of cultivation, it will always be unable to surmount the influence which the properties of certain lands exercise upon the nature of vegetables.

LITERARY AND LEARNED.

OXFORD, Dec. 12th.—On Thursday the following degrees were conferred:—

Bachelor and Doctor in Divinity, by accumulation.—Rev. W. V. C. Hunt, Exeter College.

Bachelor in Divinity.—Rev. J. Norris, Fellow of C. C. College.

Bachelor in Civil Law.—Rev. T. F. A. P. Hodges, Fellow of New College.

Masters of Arts.—Rev. G. F. W. Mortimer, Michel Scholar, J. J. Jervis, Queen's College; Rev. C. Burlton, Fellow, New College; T. Cottle, Rev. G. R. Kennal, Pembroke College.

Bachelors of Arts.—J. P. Pearce, Queen's College; J. Meynell, Brasenose College, Grand Compounders; O. Ormerod, T. Hillyard, Brasenose College; B. Owen, Scholar, H. Rogers, Jesus College; R. B. Hall, C. C. C.; E. Phillott, Scholar, Pembroke College; H. Johnson, Scholar, Wadham College; F. F. Langston, St. John's College; G. C. Bethune, Trinity College; E. Stewart, Oriel College; H. Polson, E. Knight, C. Rodd, A. Saunders, Exeter College; F. Bulley, Demy, Magdalen College.

CAMBRIDGE, Dec. 11th.—At a congregation on Wednesday last the following degrees were conferred:—

Bachelors in Divinity.—Rev. R. Lowe, Rev. J. Evans, St. John's College, Compounder.

Masters of Arts.—J. Price, St. John's College; E. Sneyd, Christ College.

Licentiate in Physic.—W. G. Peene, Trinity College, Compounder.

Bachelors in Civil Law.—H. C. Jenner, J. B. Dacent, Trinity Hall.

ROYAL SOCIETY.

DAVIES GILBERT, Esq. in the chair.—The second part of Mr. Faraday's paper "on the manufacture of glass for optical purposes," was read. W. G. Meredith, Esq., M.A. of Oxford, and J. L. Knight, one of his Majesty's counsel, were proposed. On the table were placed Reports on M. Rifaud's Egyptian Collections; the sixteenth vol. of the Asiatic Researches; the new part of the Cambridge Philosophical Memoirs; Dr. Robinson's Armagh Astronomical Observations; the Fables of Pilpay, in Persian, lithographed for the Native Education Society, Bombay, presented by the East India Company; the new volume of the Turin Memoirs; eight Nos. of the National Portrait Gallery of Illustrious and Eminent Personages of the Nineteenth Century; and a variety of other works of literature and art.

The following is Mr. Lloyd's account of the

levellings carried on across the isthmus of Panama, to ascertain the relative height of the Pacific Ocean at Panama, and of the Atlantic at the mouth of the river Chagres; accompanied by geographical and topographical notices on the isthmus of Panama, mentioned in a recent No. of the *Literary Gazette*.

The author having received from General Bolivar a special commission to survey the isthmus of Panama, with the view of ascertaining the most eligible line of communication between the two seas, arrived at Panama in March, 1828. Here he was joined by Captain Fulmar, a Swedish officer of engineers in the Columbian service. Anxious to lose no time in the prosecution of their objects, they proceeded on the 5th of May to commence their operations; resolving not to be deterred by the difficulties likely to arise from the rainy season, which had just set in, from personal privations, and even from the dangers to which they might expose their health. Their line of survey commenced at Panama, and was continued along the old road to Porto Velo, till it came to the bed of the Chagres, a river which falls into the Gulf of Mexico. The greatest height passed over in this line was 633.33 feet above the level of high water at Panama. Their constitutions were now beginning to suffer from the continued exposure to rain; and they therefore determined, after building a secure station on the banks of the Chagres, to defer all future operations till the ensuing year, when the dry season should commence. On the 7th of February, 1829, they resumed their labours, carrying on their levels from a point of the river below their former station, and 152.55 feet above high-water mark at Panama, along the course of the river to a place distant about twelve miles from its mouth, called La Braja, where the water in dry seasons is very brackish, and from which there is no perceptible current to the sea.

The result of this survey fixes the mean height of the Pacific at Panama at 352 feet above the Atlantic at Chagres. Between the extremes of elevation and depression of the general tides in the Pacific at Panama, there is a difference of 27.44 feet; but the mean difference at the usual spring tides is 21.22. At Chagres this difference is only 1.16 feet, and is the same at all seasons of the year. Hence it follows, that at high water, the time of which is nearly the same on both sides of the isthmus, the Pacific is raised at mean tides 10.61 feet, and the Atlantic 0.58 feet, above their respective mean levels, giving to the former an elevation above the latter of 13.55 feet. At low water, both seas being below their respective mean levels, by the same quantities as before stated, the Pacific will be lower than the Atlantic by 6.51 feet; so that thus, in the course of every interval from one high tide to the succeeding one, the level of the Pacific is at first higher, then equal, and afterwards lower than the Atlantic; and then again passing back by the same steps in regaining its former elevation as the tide returns.

The great chain of mountains which extends from the Andes, in South America, to the Mexican and Rocky Mountains in North America, is not, as is generally supposed, absolutely continuous through the isthmus connecting these two continents; for the northern cordillera, on the eastern side of the province of Veragua, breaks into detached mountains of considerable height, having steep and rugged sides. To these succeed numerous conical mountains rising from plains and savannahs, and seldom exceeding from 300 to 500 feet in

height. Between Chagres on the Atlantic side, and Cherrera on the Pacific, the conical mountains are less numerous, and are separated by extensive plains, with only a few occasional insulated hills, of inferior extent and elevation. Thus it happens, that at the narrowest part of the isthmus a break occurs in the mountain chain, which, in almost every other part, is uninterrupted from its northern to its southern extremities; a circumstance which marks the spot peculiarly adapted for the establishment of a communication across. The author has laid down on his map two lines for a railroad, both commencing at a point near the junction of the river Trinidad with the Chagres, and crossing the intervening plain; the one to Cherrera, the other to Panama. The latter line, although the longer of the two, would have the advantage of terminating in a considerable city. The banks of the river Trinidad are represented by the author as being well suited for wharfs, especially in the neighbourhood of the spot he recommends as the commencement of the rail-road. But as the mouth of the Chagres is impeded by a bar, he suggests the expediency of forming a communication with the adjacent bay of Limon, which in its present state affords excellent anchorage, and which, by making certain improvements in it, pointed out in the paper, might, at a small expense, be rendered one of the most commodious and safe harbours in the world.

SOCIETY OF ANTIQUARIES.

LAST week, Mr. Hallam, V.P., in the chair.—The principal communication made to the Society was by Mr. Madden, of a journal which gave a partisan description of the state of Lincolnshire and adjacent parts during the short-lived effort of the Earl of Northumberland to place the crown of Henry VIII. on the head of Lady Jane Grey: and on Thursday last, Mr. Amyot in the chair—a paper by Mr. Crofton Croker was read, respecting some subterranean chambers on Mr. Cummins' farm at Garranes, in the South of Ireland; and which concluded by a letter from Mr. O'Callaghan Newhenham, giving an account of numerous chambers similarly constructed in the neighbourhood of Fermoy. The continuation of Mr. Madden's paper was also read.

LONDON PHRENOLOGICAL SOCIETY.

THE President in the chair.—A review, by Dr. Epps, of an article on Phrenology in the eighth No. of the *Foreign Review*, was read. Casts of the heads of Burke and Hare were laid upon the table, in order to controvert the assertions made in the late pamphlet of Mr. Stone; and Dr. Wright pointed out to the visitors the accordance of the development of the heads of these notorious criminals with their well-known characters.

THE PHARAOHS.

(Second Portion of the Chronological Essay.)

II. A NECESSARY consequence of the eighteenth family following the Exode, instead of preceding that event, is, that some of the succeeding dynasties to the twenty-fifth, or Ethiopian, which conquered all Egypt, were collateral; because if the chronology be depressed three or four centuries, there could not possibly be room for the successive periods. Accordingly, we learn, from the seventh, twelfth, and thirteenth letters of M. Champollion, (see *Literary Gazette* of Feb. 28, Sept. 12, Oct. 24, and Nov. 7,) that the tombs in the Theban Necropolis belong altogether to the princes of the eighteenth, nineteenth, and twentieth, or three

last Diospolite families. But if the twenty-first, twenty-second, twenty-third, and twenty-fourth Lower Egyptian families, consisting of Tanites, Bubastites, and one Saite, succeeded the former at Thebes, how happens it that not a single tomb belonging to any of them appears? It follows, that they never reigned at Thebes; but in Lower Egypt, contemporary with the Diospolite dynasties (1). Thus, as the monuments, by excluding the Israelites, sink the eighteenth dynasty, in harmony with ancient history, they render the whole consistent by the last-mentioned result, which, too, is confirmed by history sacred and profane.

Manetho tells us that Bocchoris of the twenty-fourth dynasty was slain by Sabbacon of the twenty-fifth. Herodotus supplies from the Egyptian priests a line of princes between Sesostris and Anyasis, who was also conquered by Sabbacon: these, however, do not appear in Manetho. But it has been seen above, that the twentieth, or last Diospolite family descends to the Ethiopian invasion; and all that we learn from the Egyptian annalist concerning this line is, that it consisted of twelve princes, reigning 135 years, according to the copy of Africanus; or 178 if we rely on Eusebius. No names are given. It follows, that the line of Herodotus, ending with Anyasis, belongs to this dynasty. Thus the twentieth family, ending with Anyasis, and the twenty-fourth with Bocchoris, both terminated on Sabbacon's invasion in the year B.C. 720; computing the last seven dynasties upwards from the Macedonian conquest.

The sum of the periods of the twenty-first, twenty-second, twenty-third, and twenty-fourth dynasties, is 345 years in the most ancient copy of Africanus, while that of the nineteenth and twentieth Diospolite families is 344,—the difference one year. Hence the division of Egypt into two kingdoms appears to have happened on the termination of the great eighteenth family in the eleventh century B.C. (2), and to this division Manetho seems to allude when he speaks of the revolt of Armais, the brother of Ramesses, commonly called Sesostris. His application of the history of Armais to the Argive Danaus, is a metachronism of the same nature with that of the priests in the time of Herodotus, who referred the Pyramids to the twentieth dynasty, whereas these monuments speak for themselves,—that they are of an age long preceding any of the sculptured monuments;—in harmony with Manetho, who refers them to the first ages of Egyptian history, (see Dyn. 4 and 6,) and Josephus, who refers them to the time of the Jewish bondage. The Cetes, or Proteus, of Herodotus and Diodorus seems identified with the Thuoris of Manetho, the last prince of the nineteenth family, from the events of the Trojan war being by the priests erroneously placed in the reign of either. Between Proteus and Sabbacon, Herodotus names six kings only, but Diodorus adds Nilus, and five nameless princes, between the Rhampsinus and Cheops of the former. This makes the twelve reigns of the twentieth dynasty of Manetho. That there was more than one kingdom in Egypt at the commencement of the ninth century before the Christian era, is rendered indisputable by 2d Kings, vii. 6. (3).

That Manetho's earliest copyist, Josephus, understood the Diospolite and Lower Egyptian dynasties as reigning collaterally, is unquestionable. According to this writer's chronological system, the 600 years of the eighteenth and nineteenth families measured the interval between the Exode and the finishing of Solomon's temple, about which time the twentieth

consequently originated. He supposed the Nitocris (by him called Nicanle) and Sesostris of Herodotus, to be the same with the Queen of Sheba and Shishak of Scripture,—the contemporaries of Solomon and Rehoboam. It follows, that the Jewish historian referred the whole catalogue of Herodotus from Nitocris to Anyasis, to the twentieth dynasty of Manetho, which therefore ended with the conquest of Anyasis by Sabbacon, as above. His protracted system of time accounts for Sesostris being here included in the twentieth family, rather than the nineteenth. In fact, the system of making all the dynasties after the eighteenth in successive order, appears to have originated with Africanus, who, by raising the departure of the Jews to the year B.C. 1706, found it necessary to stretch Manetho's chronology, in order to preserve the established synchronisms; and he was in this followed by succeeding chronologists. This will, perhaps, account for the kings of the twentieth family being omitted in all the copies, because their connexion with the Ethiopian dynasty would at once have detected the corruption (4). The same view will account for Syncellus having omitted the last fifty-three reigns of the Theban Laterculus of Eratosthenes.

Hence our inference from the silence of the inscriptions of the eighteenth dynasty regarding the Jews, and from the absence of any tombs belonging to the twenty-first, twenty-second, twenty-third, and twenty-fourth dynasties from the Theban Necropolis, are confirmed by the voice of all antiquity, and we are warranted in rejecting the Usurian theory; which, sanctioned as it is by general reception among the learned, it might, without such evidence, appear presumption to question.

Thus as the important researches of M. Champollion (5) and our other learned hieroglyphmatists, by laying open the original sources of the Egyptian records (vide Syncel. p. 40), not only vindicate the testimony of Manetho and of his earliest copyists, but enable us to proceed with certainty towards solving the enigma of his chronological system, and in comparing those records with the annals of Inspiration. The dates and synchronisms which result from the foregoing view of the reciprocal bearing of historical and monumental evidence will form the subject of a future paper.

The following table exhibits the eras of the eighteenth and nineteenth dynasties, with their relation to that of the Exode, according to Manetho's five copyists. The dates in the Usurian system, as altered by M. Champollion-Figeac, are added. It will be seen that the latter are raised higher than sanctioned by any ancient authority, in order to accommodate the last reign of the eighteenth family to the departure of the Jews. This was effected by partly following Africanus and partly Eusebius in the periods of the dynasties. It is, however, plain, that if the authority of either chronographer is good for any part, it is equally good for the rest, and that there can be no hesitation in choosing between the ancient copy of Africanus (corrected by that of Josephus, so far as it goes) and the mutilated one of Eusebius. It is, moreover, evident from the epochs of the nineteenth family, according to both Josephus and Theophilus, that neither of them understood the following dynasties as all in consecutive order. This adds further confirmation to our inferences, by fixing the origin of the consecutive theory on Africanus.

Century.	Copyists.	Exod.	XVIII. D.	XIX. D.	XX. D.
I.	Josephus, B.C.	1680	1680	1367	wanting
II.	Theophilus	1608	1608	1292	wanting
III.	Africanus	1796	1686	1423	1214
IV.	Eusebius	1511	1723	1375	1181
VIII.	Synceilus	1686	1769	1368	dubious
XIX.	Champollion	1490	1822	1473	1379

It should be noted, that Julius Africanus, (the first writer who methodically synchronised sacred and profane history,) although he inclined to the general opinion that the Jews left Egypt at the commencement of the eighteenth dynasty, found, on comparing the Hebrew and Egyptian annals, that this family originated considerably lower down, and so stated it in his Chronicon.

Generally speaking, it will be found that, if 400 years be deducted from each of M. Champollion's dates in the times of the eighteenth, nineteenth, and twentieth dynasties, the results will be very near the truth. The dynasties from the twenty-first to the thirty-first, inclusive, being all consecutive, little correction will be requisite.

Notes to the References in the Text.

(1) How would such evidence as this have delighted Sir John Marsham!—the first in modern times who advanced the theory of contemporary dynasties, although well known to the ancients. His system, however, differs considerably from the present results.

(2) The priests informed Herodotus, that from Sesostris to Sethon there elapsed eleven generations, at three to a century, which amounts to 366 years; and that from the death of Moeris, (the fifth king of the eighteenth dynasty,) till Herodotus visited Egypt, the term was 900 years. But ascending 900 years from the fifth century B.C., and 366 from the seventh, we obtain the ages of Moeris and Sesostris, resulting from the above historical and monumental coincidences. This rough calculation of the father of history is particularly valuable on account of its consistency.

(3) The circumstance of the Bubastite princes of the twenty-second dynasty having assisted in the building of the palace of Karnac, and in working the quarries of Silsilis, (see Champollion's Letters, VII. and XII.) may, perhaps, be urged against their exclusion from the Theban succession, and the theory of contemporary dynasties. But the historical and monumental evidence for both is so conclusive, that the above could only have resulted from alliance or conquest. Indeed the circumstance itself proves the synchronism; for, according to the consecutive system of Champollion, the Theban buildings erected by the kings of the eighteenth and nineteenth families remained at a stand; and the quarries of Silsilis, whence they obtained their materials, were unworked during the latter part of the nineteenth, and the dark ages of the twentieth and twenty-first dynasties, till Sesonchis, the first of the Bubastite princes, resumed both,—the interval being nearly four centuries. This carries improbability on the face of it; whereas, according to the foregoing results, the operations of the Bubastites follow those of Sesostris, and his son Ramesses VII., in natural order.

It appears from Champollion's twelfth letter, (vide *Lit. Gaz.* Sept. 19,) that the inscriptions of the great speos of Silsilis come no lower than Amenophis, the third prince of the nineteenth family, who, we learn from Manetho, was driven from his throne during thirteen years, by a revolt of the people employed in the quarries, in alliance with the Shepherds.

(*Jos. contr. Apion*, lib. i.) Here, then, the suspension of the great operations of Egyptian architecture seems historically accounted for; and we should, perhaps, not much err in attributing the prodigious labour necessary to the edifices of the eighteenth and nineteenth dynasties to the remains of the Shepherds, reduced to a state of slavery by King Amoris and his successors. It is certain that, with their final expulsion by the last Amenophis and his son Ramesses, those labours ceased;—that is, if we adhere to the contemporary theory indicated by the monuments, and confirmed by history. We know the Israelites were thus employed.

(4) Should Champollion succeed in restoring the twentieth dynasty from the monuments, there will no longer be any doubt on this question. But this can hardly be hoped for; as, if we credit the Greek historians, it was an age of oppression and darkness; and Proteus, and his successors to Anysis, reigned not at Thebes, the great source of lithographic history, but at Memphis.

(5) It is important to remark, that the general truth and candour of this gentleman's translations is demonstrated by their consistency, and by the fact of the chronological results being, in most cases, diametrically opposed to his pre-adopted system. The whole, moreover, operates as an unanswerable test for the validity of his and Dr. Young's method of interpreting the hieroglyphics.

FINE ARTS.

NEW PUBLICATIONS.

The Panorama of the Thames from London to Richmond, exhibiting every object on both Banks of the River, with a concise Description of the most remarkable Places, and a general View of London. S. Leigh.

THIS is really a very clever and entertaining publication, and makes us long for the approach of that delightful season when, seated on the deck of the "Diana," with Mr. Leigh's panoramic plan on our knees, we may, as we glide along the silver Thames, become still more intimately and accurately acquainted with the various natural and artificial beauties by which its banks are embellished, and on which no one can gaze without pleasure. The panorama is, when extended, about sixty feet in length; but it folds up into a portable and handsome case. "The scenery," the artist observes, "is represented as it would appear to the spectator passing up the centre of the river; by this mode every object is distinctly seen, which would not have been the case had the view been drawn in perspective; thus, what is lost in picturesque effect is gained in minuteness of detail. It is hoped that every person living on the banks of the river will be able to discover his own residence without the least difficulty." Forming a very suitable introduction to the panoramic view of the River, there is a general view of London, taken from an elevated situation in the Adelphi, "which," it is justly remarked, "commands a larger portion of the metropolis, and more interesting objects, than can be seen from any other spot." The whole is accompanied by a typographical description; brief, but comprehending much useful information. We could not help smiling, however, at the following passage respecting Barnes Terrace:—"It is embellished with several pleasant villas, amongst which is that in which the Count and Countess d'Antraigues were murdered by their Italian footman, a few years back." In conclusion, we repeat that this is a very clever

and entertaining publication; we have no doubt that it will be a popular one; and we think it would be worth Mr. Leigh's while to prepare a similar panorama of the Thames from London to Gravesend.

ORIGINAL POETRY.

THE SIREN.

Mortal.

GIVE me the cup so fair and bright,
For my heart is heavy now;
Let my spirit grow eager and light,
And, Siren, I'll pledge my vow.
Give me the cup by men accursed,
Give, Siren, unto me!
And I'll drink with a pilgrim's thirst,
Till my soul transported be.

Siren.

Haste, Mortal! haste the pledge to share—
What draught will charm so well,
When thought is an active care,
When life is a broken spell?

Mortal.

Wake, Siren, wake that thrilling strain,
Begin that melting air,
Which winning beauty loves to feign,
Yet still a mermaid's snare.
Oh, wreathe that soft beguiling lay,
The chain of song entwine;
My heart no more resists thy sway—
Now, Siren, I am thine!

Siren.

Haste, Mortal, haste the bliss to share,
For sweet is beauty's shell,
When thought is an active care—
When life is a broken spell.

Mortal.

They say there's madness in the cup—
Destruction in the song;
But oft with tears I've fill'd it up—
I've sorrowed too long.
And now thy wizard bowl I'll quaff,
I'll list thy witching strain;
Nor vain shall be the joyous laugh,
Nor beauty's song be vain.

Siren.

Haste, Mortal, haste the pledge to share—
What power will serve so well,
When thought is an active care,
When life is a broken spell?

Nov. 27th, 1839.

W. G. H.

DRAMA.

OUR theatres have given us nothing new to criticise this week. Kean, though keened in Ireland, has revived at Drury-Lane; Miss F. Kemble enlarges and secures her conquest over popular opinion at Covent-Garden; and the Elephant goes on most swimmingly at the Adelphi.

NEWGATE.—A piece has been brought out at the Théâtre de la Gaité, at Paris, under the name of "Newgate." The plot is briefly as follows:—Three convicts are condemned to the hulks. When there, two of them devote themselves to the acquisition of every criminal accomplishment; the third repents, and, having contrived to escape, engages, under a feigned name, in an honest employment. Unfortunately, his companions soon after escape also, and discover his abode. He is compelled to receive them, and they threaten to betray him unless he will become their accomplice. In vain does he struggle with these horrible friends; they draw him into their schemes, and eventually a more severe punishment falls on the whole party. The French papers say, that in the progress of this piece the dissolute manners of the criminal and abandoned classes

of the community, are painted with so much force and sprightliness, that the effect is calculated to be very injurious to public morals.

VARIETIES.

Monotîmes.—Mr. Robert Grant, professor of comparative anatomy in London, in a letter to the Paris Royal Academy, has, it is said, removed all the difficulties that have been experienced in the classification of the group of *monotîmes*,—a name given by M. Geoffroy to a class of animals which rank between mammiferous animals, birds, and reptiles. Mr. Grant decides that these *monotîmes* cannot fairly be classed among the four classes of vertebrated animals.

Music.—We observe, by the Leicester Chronicle, that a Mr. Wilson (a native of Edinburgh, we believe, and a pupil of Crevelli's) has been making a great impression on the connoisseurs at the concerts in that town. He is a very delightful tenor; and, from what we have ourselves heard, is likely to be a most desirable acquisition to the musical and dramatic world, in which so few really fine voices of that quality are to be found. He has also cultivated the Italian with complete success under his accomplished master.

The Death of Nelson, by West.—The raffle-list for this celebrated picture (bequeathed by the late President R.A. to his grand-daughter) is, we are glad to see, filling up fast: the tickets are five guineas, and the prize is to be determined so soon as three hundred subscribers are obtained.

Literary Prize.—The "Revue de Paris" has offered a prize of two thousand francs for the best dissertation in prose on the following question: "What has been the influence of the representative government, for the last fifteen years, in France, on our literature and on our manners?" The dissertations are to be addressed, before the 1st of March, 1830, to the office of the "Revue de Paris," inscribed with an epigraph, and accompanied by a sealed note inscribed with the same epigraph, and containing the name of the author.

Eclectic Society.—The Duke of Gloucester has accepted the office of Patron to this Society; which we noticed in a recent No. of our *Gazette*.

Silk.—A specimen of silk, obtained from worms reared at Lille in the years 1828 and 1829, has been exhibited at the Museum of Natural History in that city. These worms have been fed entirely on the leaves of the *sorsonera hispanica*, a plant common in every kitchen-garden in France, under the name of *salsifis*. Cattle eat it with avidity, and the milk of cows is both increased and improved by it. Accounts from the Cape of Good Hope also state, that the rearing of silk-worms is likely to become a profitable branch of industry in that colony. The silk produced there is of a very fine quality, and the worms thrive well in the open air.

Mount Ararat.—The *Gazette* of Tiflis announces, that Professor Parrot has at length succeeded in executing his courageous project, to attain the summit of Mount Ararat. Accompanied by a monk of Etchmiadine, mentioned in his preceding account, and by two villagers, he reached the summit at three o'clock in the afternoon, on the 9th of October last, and there set up a cross 5 feet high. By his astronomical observations he determined its elevation at 200 French feet above the level of the sea.

Hungerford Market.—We have on several

occasions called the attention of our readers to the plan which has, for the last three or four years, been in agitation for the revival and reconstruction of Hungerford Market. We are glad to observe that a provisional committee of highly respectable individuals has been formed, for the purpose of carrying forward the necessary preparatory measures. By that committee a prospectus has recently been issued, in which the great advantages that would accrue to the west end of the town from the re-establishment of the market in question, are specifically described. It appears from the estimates that the sum of 210,000*l.* will be amply sufficient for the attainment of the object in view. This sum it is proposed to raise in shares of 100*l.* each; and it is confidently presumed that the undertaking will yield a profitable return for the capital thus subscribed.

Census.—A Paris paper of Sunday last contains a curious calculation of the revenues of the population of France, divided into classes. The total amount is assumed to be 6,306,789,000 francs, and the number of the population 32,262,000; giving 198 francs 33 cents per head per annum, or 54 centimes and 6-10ths per day. This population is divided into ten classes; the first of which, consisting of 152,000 persons, receives 608,000,000, or an average of 10 francs 96 cents per day; and the table goes on gradually diminishing to the 9th class, consisting of 3,500,000 persons, who are said to receive 700,000,000, or an average of 55 cents each per day. The 10th, 11th, and 12th classes are put at 22,500,000; of which the first have, on an average, 41 cents per day; the second 33 cents, and the third 25 cents; so that 7,500,000 have only two-pence halfpenny per day English to subsist upon. This calculation, although probably in some degree imaginative, shews a frightful extent of human misery.

Russian Diamonds.—We have repeatedly given accounts in the *Literary Gazette* of the golden mines in the Ural Mountains, and, more recently, of the expedition of Baron Humboldt to explore this interesting region. It now appears that, among other discoveries, there is a great probability of diamonds being found to a considerable extent on the left side of the Ural; as Count von Potier, who accompanied the learned baron, obtained seven of these precious stones from the gold washing by mere children, at a place about 250 wersts from Perm. The whole district resembles the Brazil Mountains, so rich in gold and diamonds; and machines have been ordered to prosecute this investigation more completely.

Topography and Orthography.—One of the French journals talks fluently and repeatedly of the English settlement on the Iwan River, meaning thereby, we presume, the Swan River.

The Bones.—It is little more than twenty years since the existence of veins in the bones was ascertained. They were then for the first time discovered, furrowing the diploe, in the form of tubes with bony sides; and it was found, not without astonishment, that the blood was circulated through those veins without any concurrent action of their sides, but solely by the propulsion of the arterial blood into the veins, or by a kind of absorbing force inherent in the latter order of vessels. At that period, the veins in the flat bones of the skull, the shoulder, and the pelvis, and those of the principal long bones of the extremities, were alone discovered. M. Breschet, a French anatomist, has recently devoted his attention to the subject, and has traced the veins in the other parts of the osseous system: all the veins

of which are now, in consequence of his researches, as well known as the arteries, and perhaps better. M. Breschet has also investigated the character of the veins which connect the veins of the bones with the venous system generally. A highly favourable report of his labours, and of a work describing them, which is in the course of publication, has been made to the French Academy by a commission appointed to examine into the subject.

LITERARY NOVELTIES.

In Mr. Murray's new list of announcements we are attracted by some interesting works: for example—*Consolations in Travel*; or, the Last Days of a Philosopher, by Sir Humphry Davy. — A Memoir of the Life and Public Services of the late Sir Thomas Stamford Raffles. — The Book of Psalms, newly translated from the Hebrew, and with Explanatory Notes, by W. French, D.D. Master of Jesus College, Cambridge, and G. Skinner, M.A. Fellow of Jesus College, Cambridge. — A Narrative of the Life and Adventures of Giovanni Finati, native of Ferrara, who, under the name of Mahomet, made the Campaign against the Wahabics, for the recovery of Mecca and Medina; and since acted as interpreter to European travellers in some of the parts least visited of Asia and Africa. — The Life of Julius Cæsar, by the Author of the *Life of Alexander the Great*. — On Financial Reform, by Sir Henry Parnell. — The Kirby Letters; a Family Tour from Yorkshire to Pensance. — Principles of Geology, by C. Lyell, F.R.S. — and the Life of Sir Humphry Davy, comprising a great part of his early Correspondence, by Dr. Paris.

A monthly publication is about to appear at Perth, under the title of the Perth Miscellany of Literature, Agriculture, Gardening, and Local Intelligence. The plan seems to be much approved of.

The Rev. Hobart Caunter is preparing for publication a poem entitled the Island Bride, with an illustration by Martin.

In the Press. — Anecdotal Reminiscences of distinguished Literary and Political Characters, with Autographs, by Mr. Leigh Cliffe. — Literary Recollections and Biographical Sketches, by the Rev. R. Warner, F.A.S.L. — Folio Illustrations of Indian Zoology, from the Collection of Major-General Hardwicke, selected and arranged by S. E. Gray. — The Poetry of the Magyars, with an Account of the Language and Literature of Hungary and Transylvania, by Dr. Bowring.

LIST OF NEW BOOKS.

Bishop of London's Sermons at St. Botolph's, 8vo. 12s. 6d. — The Oracle of Health, &c., by Medicus, 12mo. 6s. 6d. — Thoughts on Laughter, 12mo. 2s. 6d. — New Scheme of Evangelical Religion, 12mo. 2s. 6d. — Summary and Index to Herodotus, 12mo. 8s.; 8vo. 10s. 6d. — Bland's Annotations on St. Mark, 8vo. 6s. 6d. — Thoughts on Anthropomorphism, by Sylvanus, post 8vo. 4s. 6d. — Murray on Atmospheric Electricity, post 8vo. 6s. 6d.

TO CORRESPONDENTS.

* * * After next week, in order to avoid offence against the Stamp Acts, we must beg our friends who desire to have Literary Announcements inserted, to arrange the matter with our Publisher or his clerk. The Commissioners of Stamps having liberally permitted us to conclude the volume for the present year in the same manner in which it was commenced—however much we are inclined to promote, gratuitously, the interests of literature, it is both our pleasure and our duty, sedulously to attend to their interpretation of the Revenue Acts.

There has been, and is, really so much humbug in book-manufacturing, that we cannot remember all the tricks that have come to our knowledge. D...., and our readers generally, therefore, will, we trust, excuse us for having forgotten, when we last week noticed the "Court of Louis the XVIII., by a Lady," that we had ourselves some months ago let out the secret that it was the production of three young Frenchmen.

To James W.: Moir, we believe.
H. J. R.'s poem is too long for us. The rhythm of C. T. E. is too irregular. We cannot say that we partake of the sensibility which dictated the elephant's appeal. If this "half-reasoning brute" were restored to her native Siamese woods, she must fall an immediate sacrifice to her fellow-animals in their wild state, or to starvation.

Connected with Literature and the Arts.

KING'S COLLEGE. Public attention

being now directed to the expediency of establishing a second and liberal education, at a moderate expense, to the sons of professional and mercantile men and others, the Council of King's College, London, feel it to be their duty to impress in the strongest manner upon the contributors to such institutions, the importance of founding them upon those principles which are embodied in the Charter of King's College, as applicable to its Lower Department, and of making religious instruction, according to the doctrines of the Established Church, an essential part of their course of education. With this view, the Council recommend that the more influential amongst the Clergy and Laity in the populous districts, where Schools of this description may be thought likely to succeed, should take measures for their early formation, and place them, where it may be deemed expedient, in union with King's College, which will thus form the centre of a system of education, combining the advantages of a judicious and extended cultivation of the intellectual faculties with the careful inculcation of religious truths and moral duties.

The Council of King's College are ready to receive applications from District Grammar Schools to be taken into union; and the trust that some plan may be devised for offering to pupils who shall have been educated at such schools, certain facilities and advantages when they are admitted into the Higher Department of the College.

The Council have great pleasure in stating, that District Grammar Schools, on Church of England principles, are in progress of formation in some of the most populous parishes in the suburbs of London.

Union of District Schools.

King's College, London, is, by the terms of its Charter, "a College for general education, in which, while the various branches of Literature and Science are made the subjects of instruction, the minds of youth will be imbued with a knowledge of religious truths and moral duties."

The preamble of the Charter granted to this Institution states, that "His Majesty, being desirous of maintaining indissolubly the connexion between sound religion and useful learning, highly approves of the design of instituting a College, in which instruction in the duties and doctrines of Christianity, as taught by the United Church of England and Ireland, shall be for ever combined with other branches of useful education."

The Charter provides that all Officers, Professors, and Masters shall be members of the said United Church, except only the Professors of Oriental Literature and Modern Languages.

District Grammar Schools will be received into union with King's College upon satisfying the Council that provision is made in their fundamental regulations for the systematic instruction of the scholars in the doctrines and duties of Christianity, as taught by the Established Church; and also, that the Head Master and his regular assistants be members of that Church, in accordance with the principles laid down in the Charter of the College.

With respect to the benefits which may be expected to result to District Grammar Schools from being taken into union with King's College, it may be said that it will be an advantage of no inconsiderable value to be regularly and ostensibly connected with an institution formed for a great national object, under the auspices of the Sovereign, and sanctioned by a Royal Charter of Incorporation. As regards the facilities in attending the Lectures of the Higher Department, which the Council are desirous of affording to Pupils educated in these Schools, it is obvious that they must form a subject for future deliberation and arrangement; but in the meanwhile the Council will be ready to assist the Directors or Committees with such advice and information as may be required, and as may tend to promote the success of their undertaking.

By order of the Council,
H. SMITH, Secretary.
No. 2, Parliament Street,
Dec. 18, 1850.

ELOCUTION. The Rev. S. WOOD, B.A.

proposes to give instruction in Elocution, either to Individuals or to Classes.

In teaching to read and speak, Mr. Wood will pursue a plan which is more specific than those generally followed, and which, he trusts, will prove more effective. He will lead his Pupils through a regular course of analyses, distinguishing the different kinds of sentences, and assigning reasons for the different modes of reading them. He will enumerate the places which require other pauses besides those denoted by the grammatical stops. He will discriminate the several kinds of emphasis, explain the nature of rhythm, and give directions for modulating and strengthening the voice.

Mr. Wood trusts that, by proceeding in this systematic manner, he will be able to fix general principles in the minds of his pupils, and to form not only good, but graceful and accomplished speakers.

Terms.—Eight Lessons:
For a single Pupil £3 0
For Two learning together 1 10
For Pupils in Classes 1 0 each.

Each Lesson will occupy about an hour and a half.
Mr. Wood's Residence is at No. 26, Carmarthen Street, within a few doors of the London University.

This day is published, price 1s. 6d. plain; 2s. on India paper;

LITHOGRAPHIC PRINT, presenting

striking likenesses of those extraordinary youths, in Three Positions and their relative height exhibited by contrast with that of the surrounding Spectators. Drawn from Nature and on Stone,

By N. WHITTOCK, Esq.

The Device, and Gentle Reproach, drawn on Stone by T. and W. Fairland, from Designs by Bonington, price 5s. each.

Views of Schaffhausen, Nuremberg, Bois le Duc, and Cologne, from original Drawings by S. Front, Esq. price 1s. 6d. each, plain; 2s. on India paper; and 3s. beautifully coloured.

Published by J. M'Cormick, 68, Paternoster Row.

A great Variety of plain and coloured Prints, for the Illustration of a Drama, Scrap-Books, &c.

Beautifully appropriate for Album or Scrap-Book.
HOLY FAMILY. Sir Joshua Reynolds's fine Picture, the Property of the British Institution, for which Two Thousand Guineas were given. This day is published, a fine Line Engraving from the above Picture, by Walker. To be had of the Printers of London, and J. G. Walker, Strand Street, Chancery Lane, and Messrs. J. Zane, 21, Fleet Street; or, at Bath, of Salmon, Printseller; at Norwich, of Freeman, Printseller; at Birmingham, of Everett, Printseller. Proofs, India, without the letters, 15s. each; Proofs, India, with the letters, 10s. each; Prints, 7s. each.

Just published,
TWO PRINTS, illustrative of Lord Byron's Works, viz. a View of the Island on the Lake of Geneva, drawn and etched by W. De la Motte, and a View of the Castle of Chillon, etched by the same Artist, and mezzotinted by T. Lupton. Price of each Print, 2s.; Proofs, 5s.
Published by W. B. Tiffin, 3, Haymarket.

This day is published,
WESTALL'S GREAT BRITAIN ILLUSTRATED. No. XVII. containing correct Views, taken for the purpose, and beautifully engraved by E. Finden, of Canterbury—Netley Abbey—Lancaster Castle—Bristol. This Work is published at the very low price of One Shilling per Number, the Publisher relying on its extensive Circulation for the repayment of the great expense he incurs in its production. The encouragement it has already received will induce him to use every exertion to render it still more worthy of public patronage.

A few India proofs are taken off, price 5s.
The early Numbers of this edition are becoming scarce.
Printed for Charles Ellis, 55, Fleet Street.

EASTLAKE'S BRIGANDS. The following popular Engravings, from which the principal Scenes are taken as represented in the Drama of the "Brigands" and performed at the Theatre Royal, Drury Lane, may be had of Moon, Boyd, and Graves, Printers to the King, 6, Pall Mall.

1. The Brigand Chief reposing, attended by Maria Graja, his Wife. Size, 16 inches by 14. Price 10s. 6d.
2. The Wounded Brigand Chief successfully protected. Size, 16 inches by 14. Price 10s. 6d.
3. The Dying Brigand. Size, 16 inches by 14. Price 10s. 6d.
4. The Bandit of the Appennines. Size, 9 inches by 14. Price 5s.
5. The Wife of a Brigand Chief. Size, 9 inches by 13. Price 5s.

Panorama of the Thames.
Just published, price 1s. 6s. plain, or 2s. 6s. beautifully coloured, and folded up in a portable form.

THE PANORAMA of the THAMES, from LONDON to RICHMOND. This Work is upwards of 60 Feet in length, and on a scale of sufficient extent to exhibit every Building of either Shore. It is accompanied by Descriptive Notices of the most remarkable Places, and preceded by a general View of London, Five Feet Five Inches in length.
London: Published by Samuel Leigh, 18, Strand.

MUSIC.

Price 12s.
SEVENTY SACRED MELODIES. The Poetry by Bishop Heber, Campbell, Milman, Montgomery, Wesley, &c. The Music by Handel, Haydn, Mozart, Beethoven, &c. The whole arranged for the Voice, with an Accompaniment for the Piano-Forte.
By J. BLOCKLEY.
Cramer, Addison, and Beale, 201, Regent Street.

BOOKS PUBLISHED THIS DAY.

MEMOIRES de M. de BOURRIENNE,
Vol. I. to Vol. II.
Dulau and Co. 27, Soho Square.

In 3 vols. post 8vo. 51s. 6d.
THE EXCLUSIVES!!!

The "Exclusives" will excite more attention than any work of a similar class has done since "Tremaine." It will do this for several reasons: partly from its name—still more from the curiosity which has been raised respecting the alleged eminent station of its writer—but most of all from its intrinsic qualities and characteristics. A hurried glance at these latter and only legitimate sources of critical attention, in a literary point of view, is all that we can give this week. We may state more than one occasion and cause for recurring to the volumes hereafter. The "Exclusives" is emphatically, and exclusively, a picture of fashionable life in the present day: we will add, in unqualified and unobscured terms; that it is, generally speaking, at once the truest, the fairest, the most intelligible, and the most comprehensive picture of that life, which has yet been presented to the world. Moreover, though apparently struck off in a hurried and unprepared manner, it is written with great general ability—with a sense of the mixed motives of human action, so far as its observations extend—with a sufficient insight into the leading and permanent passions and affections of the heart—with a perfect knowledge of the society in which all its scenes are placed—and finally, with an air of infinite superiority over all the matters which compose those scenes, and the persons who frequent them. The inference to be drawn from the foregoing is, that the writer of the "Exclusives," whoever he or she may be, is not at present living in the society here so ably and vividly depicted: whether occupying that one station which alone is above it, or whether excluding from it by any other causes, is what we do not pretend to be the means of ascertaining; and we therefore shall not dwell on further. It presents us with an exposé that no other modern novelist has yet dared to put forth.—*Court Journal.*
Henry Colburn and Richard Bentley, 6, New Burlington Street.

Waverley Novels, New Edition, with Introductions and Notes by the Author.

ROB ROY, Vol. I. forming Vol. VII. of this edition, has just been published, price 5s.
Vol. II. being the completion of this Novel (Vol. VIII. of the edition), will appear on the 1st of January.

Waverley, Guy Mannering, and the Antiquary, each in 5 vols. and forming Vols. I. II. III. IV. V. and VI. of the new edition, are again reprinted.

The Tales of my Landlord, Vol. I. (Vol. IX. of the new edition) will appear on the 1st of February, 1851.

The Publishers have the satisfaction of announcing, that this volume is illustrated with Designs by Wilkie.

Old Mortality, Vol. II. by Cooper and Burnet.

The Heart of Mid Lothian, by Burnet, Stephenson, Kidd, and Fraser.

The Bride of Lammermoor, by Stothard, E. Landseer, Stephenson, and Farrier.

The Legend of Montrose, by Clint and Buxall.

This new edition of the Waverley Novels having, at this early stage of its progress, attained a degree of success unprecedented in the Annals of Literature, the Proprietors have the pleasure of stating, that they are in consequence enabled to bring forward Duplicate Engravings, on Steel, of the whole Designs of the respective Artists. This course has been adopted, that every purchaser may depend on receiving undoubted good impressions, notwithstanding the very large number printed.
Published by Cadell and Co. Edinburgh; Simpkin and Marshall, London; and sold by every Bookseller in Great Britain and Ireland.

THE LANDSCAPE ANNUAL; or, Tourist in Italy and Switzerland, illustrated with Engravings, from Drawings by Samuel Prout, Esq. Painter in Water Colours to His Majesty; the Literary Department by T. Roscoe, Esq. Dedicated, by permission, to the Honourable Lady Georgiana Agar Ellis.
Price, elegant bound in morocco, 12. 1s.; royal 8vo. India Proofs, 2s. 12s. 6d.

A limited number of Proof Impressions of the Plates are printed to illustrate Lord Byron's Poems, and the various Works on Italy, &c. and for the Collectors of fine Engravings.

Proofs, on India paper, with Etchings 45 4
without Writing 4 4
Published by Cadell and Co. Edinburgh; Simpkin and Marshall, London; and sold by every Bookseller in Great Britain and Ireland.

Small paper prints will not be sold separate from the Book.
Published by R. Jennings, 48, Chancery.

Just published, by Robert Schaefer, 68, Paternoster Row,
AN HISTORICAL AND STATISTICAL ACCOUNT OF NOVA SCOTIA, 12 vols. 8vo. 2s. boards. Illustrated by a Map of the Province and several Engravings.

By THOMAS C. MALLIBURTON, Esq. Barrister-at-Law, and Member of the House of Assembly, Nova Scotia.

Hume and Smollett, with Embellishments.

The Publishers of Hume and Smollett's History of England, with Portraits and numerous other Historical Engravings by the best Artists, in 16 vols. 8vo., have recently been enabled to complete a few copies of that elegant edition, which is in their intention to sell at 4s. 12s. in boards. These copies would have been long ago sold had they not been sequestered under very peculiar circumstances, and they have the advantage of very early impressions of the plates. There are also a very few copies on royal paper, the plates to which are early proofs, and which will be sold for 10s.

There being a few extra Sets of Smollett, persons who may have to have the Hume alone have now an opportunity of completing their Sets. There are also some odd Volumes of Smollett.

The Works of William Hogarth, 2 vols. royal 8vo. consisting of 30 Engravings, with Illustrative Memoirs, by T. Clark. Price 2s. 6s.; published at 2s. 12s.

In 5 vols. post 8vo. price 18s.
WILMOT RAVENHURST.

Edited by his Friend, HENRY VERNON.
Contents of Vol. I.—Introductory—Life—Remains—the Old Gentleman—Christmas Night—the Married Mill—the Dead Man and Ghost of Cressar—the Old Gentleman and Old Maid—Twelfth Day—the Smuggler—the Poacher—the Wig-Travelling Companion—Henry Halworth—St. Valentine's Day—Gordon—the Painter's Account of Himself.

Contents of Vol. II.—Introductory—the Monk of Banerem—the Three Brothers—the Revelations of a Village—the Baring House—Death and the Grave—the Will—an Introduction to Julia—Julia—Surrender.

"The author of this book is evidently a man of strong mind and right feeling."—*Edinburgh Literary Journal.*
"The tales are amusing, varied, and may be put into the hands of young persons without scruple. We cordially recommend them to our readers."—*New Monthly Magazine for Nov.*

Volume II. may be had separately.
James Ridgway, 159, Piccadilly; and, by order, of every Bookseller in the Kingdom.

A new edition, 4 vols. 8vo. with a Chart, 5s. 2s.
THE HISTORY of the LIFE and VOYAGES of CHRISTOPHER COLUMBUS.

By WASHINGTON IRVING.

"This is an excellent book, and we venture to anticipate that it will be an enduring one; neither do we hesitate to predict a light and ardent as a full consciousness of all that it implies. We are perfectly aware that there are but few modern works that are likely to verify it, and that it probably could not be estimated with safety to so many as one in a hundred even of these we praise. For we mean not merely that the book will be familiarly known and read to some twenty or thirty millions of men, but that it will be solid binding into every considerable collection; and that it will supersede all former works on the same subject, and serve as itself superseded."—*Edinburgh Review.*
Printed for John Murray, Albemarle Street.

Architectural Library, 39, High Holborn.

THE COURT JOURNAL. Many Persons

having been disappointed in obtaining last Saturday's Number of this new Journal of Fashion, with which were presented, gratis, on a separate sheet, engraved Fac-Similes of all the Princess of Orange's lost Jewels, we are requested to state, that the Number (33), with the Fac-Similes, has been reprinted, and will continue on sale during the present and following week. Among the various amusing articles in the same Number will be found—The Two Seasons—Grand Fêtes at Northumberland, Hertford, and Holderness—Lady Londonderry's Petit Soupers and Mrs. Hope's Balls—London Letters—Lady J.—A new Alchemist—Projected Marriages—A Peep before the Curtain—The Excursions of T.—Lady Seraphina at Naples—Foreign Courts—The Emperor Alexander and Prince Eugene Beaumharnais—A Scene on the Prater at Vienna from the M.S. Notes of a Nobleman—Ninon de l'Enclos and Madame de Maintenon, a Scene at the Palace of Versailles—Miss Kemble's Beloved—All the Political, Literary, and Fashionable News of the Week.

Printed for Henry Colburn, and published by W. Thomas, at the Office, 19, Catherine Street, Strand.

LECTURES ON SCULPTURE.

By JOHN FLAXMAN, Esq. R.A.

As delivered by him before the President and Members of the Royal Academy. With a brief Memoir of the Author. "There is not one of these discourses which may not be read with pleasure as well as improvement by the ordinary class of readers, certainly by all who cherish a love for the fine arts, equally with the student in sculpture. The learning they contain qualifies them for the instruction of the last. The easy and popular manner in which that learning is conveyed, with references to examples, either generally familiar, or made known by illustrative plates, of which there are upwards of fifty at the end of the volume, renders the perusal of the lectures a facile, interesting, and pleasing study."—*Athenaeum*.

John Murray, Albemarle Street.

The following Books have been lately published by J. Hatchard and Sons, 187, Piccadilly:—

THE IMPIOUS FEAST. A Poem, in Ten Books.

12mo. 2s. half-bound, a 10th edition of

STORIES from the HISTORY of ENGLAND.

Also, by the same Author, 12mo. price 2s. half-bound, Progressive Geography for Children.

"All books of geography (which I have met with) begin with the more abstruse and difficult, and postpone the more easy and technical parts of the study. This order I have reversed. I endeavour to impress upon the mind, in the first instance, those things which are the subject of memory alone, and for which no reason need be, or can be assigned. There is no reason why the capital of England might not have been named Paris instead of London, or why Poland should not be called Italy, or the Danube the Volga. No reason can be given why a peninsula of the particular shape of Spain and Portugal should have been placed at the south-west of Europe, rather than at the south-east. The names themselves, and the appropriate use of them to place, are (in this view) purely accidental and arbitrary. It seems therefore proper to begin by charging the memory with those arbitrary distinctions and divisions, which require no reasoning, and which, if not learned by rote in early youth, are seldom thoroughly, and never without much difficulty, learned afterwards."—*Author's Preface*.

John Murray, Albemarle Street.

BERTHA'S VISIT to HER UNCLE in ENGLAND, comprising a Variety of interesting Information for Young Persons.

John Murray, Albemarle Street.

2d edition, in 2 vols. small 8vo. price 7s.

BLUE-STOCKING HALL;

A Tale.

"This is a professed and eloquent defence of mental improvement in females, which the ignorant of their own sex, and the simple ones of ours, have agreed to stigmatise by the epithet of *blue-stocking*. The book is a good book; its objects are laudable, its opinions sensible. It contains many sound reflections on the prevailing defects of female education. It is of a class somewhat resembling 'Cecilia,' but displaying more knowledge of the usage and practice of society,—is written in a more vivacious style, and belongs less to the efforts of party than that celebrated work. We recommend the volume as at once entertaining and useful, and particularly adapted to the tone of prevailing opinions, and to the redemption of modern manners."—*Gentleman's Magazine*.

Also, just published, by the same Author,

Tales of My Time, in 3 vols.

Henry Colburn and Richard Bentley, 8, New Burlington Street.

A JOURNEY through NORWAY, LAP- LAND, and Part of SWEDEN, with some Remarks on the Geology of the Country, its Climate, and Scenery; the Aspect of some of its principal Mountains; the present Political Relations of the Two Countries; Statistical Tables, Meteorological Observations, &c.

By the Rev. ROBERT EVEREST, A.M. F.G.S. Late of University College, Oxford.

Printed for T. and G. Underwood, 35, Fleet Street.

HISTORICAL PRESENTS, &c.

"These volumes are valuable presents at this season of the year."—*New Monthly Magazine*.

1. The Romance of History, New Series, 2 vols.

"Our limits will not permit any thing like analysis of the vast store of romantic deed and wild adventure contained in the work."—*Literary Gazette*.

"An excellent medium for conveying strong and vivid pictures of the past."—*Monthly Review*.

2. The Romance of History, First Series, 2d edition, 2 vols.

"These tales are valuable illustrations of English manners."—*Times*.

"They are of the most intense and vivid interest."—*Literary Magazine*.

3. Conversations on Intellectual Philosophy; or, a Familiar Explanation of the Nature and Operations of the Human Mind. 3 vols. 16s.

"They contain much excellent matter for every age: to the young they are invaluable."—*Literary Gazette*.

4. The Poetical Sketch Book. By T. K. Hervey. Elegantly printed in 1 vol. and beautifully embellished by Barrett and Pinder. Price 10s. 6d.

"This is a most delightful volume. Flaminio, the most exquisite poem of its length, perhaps, ever written, opens the work."—*Literary Gazette*.

5. The Art of Dancing. By C. Blasis, principal Dancer at the King's Theatre. Accompanied with Plates, and original Quadrilles set to new Figures. 1 vol.

"It cannot fail to be of inestimable benefit to the pupil. It is of equal importance to actors, singers, dancers, and musicians."—*La Belle Assemblée*.

Printed for Edward Bull, New Public Subscription Library, 35, Moles Street, Cavendish Square.

Uniform with Beck's Index to Euripides,

INDEX Accuratus et Copiosus Verborum, formularumque omnium in Sophoclis Tragediis integris et deperditarum Fragmentis occurantibus. 8vo. 12s. boards.

Cambridge: Printed for W. P. Grant.

Of whom may be had, recently published,

1. Elements of Greek Versification, containing a brief Account of the principal Metres, with Exercises on those which are most in use. By the Rev. J. Davies. In 12mo. price 2s. 6d.

2. Self-Instructions in Arithmetic, designed for Schools and Universities. By J. M. F. Wright, B.A. 8vo. 6s. 6d. boards.

3. Self-Examinations in Euclid; designed for Schools and Universities, by J. M. F. Wright, B.A. Author of "Self-Examinations in Algebra," &c. 6s. 6d.

4. Francoeur's Complete Course of Pure Mathematics. Translated by H. Blakelock, M.A. Catherine Hall. Vol. I. 8vo. 15s. boards. Vol. II. will appear immediately.

5. A Compendious Treatise on the Art of Latin Poetry, grounded on the Work of M. C. D. Jani. 8vo. 8s. boards.

Contents.—1. Account of the Latin Language, and Chronological Sketch of the Roman Poets.—2. Laws of Metre, with a minute Analysis of the Hexameter, Elegiac, and Alcaic Metres.—3. Grammar of Poetry, wherein the great Differences of Language in the Roman Prose Writers and Poets are displayed and illustrated.—4. Poetical Elegance and Ornament.—5. Indices of Epithets, &c.—6. Hints for Composition.

By JOHN MURRAY, F.R.S. F.L.S. F.G.S. &c. Printed for Whitaker, Treacher, and Co. Ave Maria Lane.

Price 6s.

THE LIFE and SERVICES of CAPTAIN PHILIP BEAVER, R.N. late of H.M.S. Nieme.

By Captain W. H. SMYTH, R.N. K.S.F. F.R.S. and F.S.A.

"There is much in the volume which will be interesting to the general reader, and a professional student may derive from its perusal many valuable hints for his conduct."—*Monthly Review*.

"The volume before us deserves the honour of ranking with the lately published Memoir of Lord Collingwood, between whose character and that of Captain Beaver there exist some points of similitude. We predict that it will become popular; and we trust that it is the harbinger to other works of the same kind from the same pen."—*United Service Journal*.

Henry Colburn and Richard Bentley, 5, New Burlington Street.

New Literary Periodical.
On Wednesday, the 6th of January, 1830, will appear, No. I. of
THE FOREIGN LITERARY GAZETTE, and WEEKLY EPITOME OF CONTINENTAL and DOMESTIC SCIENCE, LITERATURE, ARTS, &c. (In English.)

To be continued on every succeeding Wednesday, price Eightpence; by post, at 10s. 6d. per annum.
At a period when the minds of men throughout the civilized world are ardently turned to the cultivation of the sciences, when education, and its concomitant, literature, are generally diffused, and when discoveries and improvements are almost the every-day reward of this enquiring state of things, it is not surprising that a multitude of organs should offer themselves to disseminate among the public the acquisitions to knowledge as they continually arise. The periodical press has, under these circumstances, become more than ever a powerful and a valuable medium for conveying that information which the enlightened and inquisitive spirit of the age demands; and it is not too much to say, that, in its general character, it ably and satisfactorily supplies what is required. Many journals, and publications of every form and class, convey intelligence of every kind to their readers, from the common news of the day to the most elaborate researches into questions of great pit and moment. Curiosity is gratified, food is furnished for the mind, the understanding is enlarged, and the whole social body is refined, by this rapid circulation of instruction; and it may be affirmed, that the glorious art of printing thus exercises an influence of incalculable benefit on the best interests of mankind, and far exceeding that of any former time.

To add another useful member to this circle, and supply a want which is still very obviously felt, are the objects of the "Foreign Literary Gazette." It cannot escape observation, that, however useful and efficient are the works which tend to elevate the progress of our own literature, sciences, and arts, there are but few which endeavour to direct attention to those of other countries. Imperfect and incidental notices are all that have, until very lately, been bestowed by English writers on the immense and stirring mass of intellect which pervades the Continent of Europe, and is now rapidly extending to the New World. We, in our insular position, hardly learn, and that tardily and at long intervals, what is continually achieving by the active mind of Germany, of Italy, of France, of Russia, of America, and of other nations; and owing to this partial ignorance, we are at the disadvantage to be derived from our communication with the ideas and suggestions of contemporaries, who, in distant lands, are exploring the paths of learned, scientific, and philosophical inquiry,—paths in which an accidental hint or remark so often leads to the most important results that can add to the accumulating happiness and splendour of the human race. The "Foreign Literary Gazette," therefore, purports to condense within the compass of a weekly sheet, (the form of which renders it susceptible of great rapidity both in receiving and in diffusing,) whatever the skill, the learning, the industry, and the genius of individuals or communities abroad may bring forth for the delight and welfare of mankind. In order to execute this responsible undertaking in an honourable manner, no preparatory pains, labour, and expense, have been spared. Connected with the most powerful Booksellers in London; having established, throughout Europe, a correspondence with contributors of the highest attainments; being perfectly independent, and with ample means to command, as opportunities occur, still more extensive resources, the directors of this publication are confident of producing a work at once highly entertaining to the general reader, and instructive with information to the man of science and the scholar. In short, it will vividly reflect the literary and scientific pursuits of foreign countries, so systematically as to impart a distinct idea of their cultivation and progress, and so rapidly as often to precede their own periodicals.

The Contents will be chiefly
Reviews of New Works, Sermons, Tracts, and Transactions of the leading Literary, &c. Societies.
Original Essays on Subjects of immediate importance, Extracts from Foreign Journals, Memoirs, Antiquities, the Drama, Music, Light Reading, and Improvements in Mechanics, Commerce, Navigation, Manufactures, &c.

To be published in London by W. A. Scripps, 7, Wellington Street, Strand, and by Dulau and Co. Soho Square, to whom Communications for the Editor may be sent.
Orders for the "Foreign Literary Gazette" are received by all Booksellers, Newsmen, &c.

DEBRET'S PEERAGE OF THE UNITED KINGDOM, corrected to the present time, will be published in a few days.
Dec. 10, 1829.

On the 30th instant will be published, in post 8vo. 6d. boards.

PRICE 8d.

TO OUR READERS.

AMONG friends there is little need of protestations or assurances, and therefore, though custom almost demands a few words at this season of the year, we shall very briefly say what we have to say to our friendly Readers. Encouraged by their unceasing and increasing support, we have omitted no exertion to render the LITERARY GAZETTE as general and perfect an epitome of the Literature, Science, and Fine Arts of the time as its limits would possibly allow: and we are free to affirm that it does form a more complete compendium of these important matters than any periodical that ever issued from the press. In other respects, we have only to repeat, that a single line never gained admittance to its columns through partiality; that it has neither courted favour by flattery to the measure of individual expectations, nor feared to incur displeasure by honest strictures. Having by such means obtained the public confidence, is the best guarantee that it will, by a steady adherence to the same principles, continue to deserve it.

REVIEW OF NEW BOOKS.

Royal Naval Biography; or, Memoirs of the Services of all the Flag Officers, &c. &c. whose Names appeared on the Admiralty List at the commencement of 1823. By John Marshall, Lieut. R.N. Supplement, Part 3. 8vo. pp. 414. London, 1829. Longman and Co.

PURSUING his interesting researches with great diligence and attention, Lieutenant Marshall has here added another excellent volume to his records of our naval heroes. The exploits of a number of gallant officers, together with the official dates of their promotions, and the despatches which detail their particular services, are related with brevity and perspicacity; and the whole interspersed with observations and anecdotes, which relieve the dryness of circumstantial particulars, and recommend the work to popularity, on account of the entertainment it affords, as well as to regard as a book of reference. Having given it this general character, we shall extract a few passages to illustrate our opinion. The following is a striking anecdote of the extent to which our sailors carried daring during the late war.

"Captain Peyton was posted into the Minstrel of twenty guns, Sept. 26, 1811; from which period he appears to have been employed on the coasts of Valencia and Catalonia until nearly the end of the war. On the 10th Aug. 1812, Captain Peyton observed three French privateers lying under the protection of the strong fortress of Benidorm, between Alicante and Cape St. Martin. Finding that their place of rendezvous was discovered, two of them hauled ashore, landed six of their guns, and erected a battery on the beach, which was manned by their joint crews, amounting to eighty men, chiefly Genoese: under these circumstances, he could do no more than prevent their escape. On the night of Aug. 12, a cutter was sent to row guard near the shore, under the command of Mr. Michael Dwyer, a gentleman who had been made a lieutenant

nearly five months before, but was still ignorant of his promotion. This young officer considered, that if he could take the privateers' battery, he might be able to capture, and bring out the vessel, which still continued afloat. With this view he had questioned some Spaniards who came from the town, and they all agreed in stating that the enemy had retreated, leaving only thirty men in the battery, and twenty in the castle. Greatly as the force in the battery, even according to this information, exceeded his own, he relied upon the courage and steadiness of his boat's-crew, only seven in number, determined upon the attempt, and accordingly landed, at 9^h 30^m p.m., about three miles to the westward of the town. The moment his gallant little band began to advance, they were challenged by a French sentinel: Mr. Dwyer answered in Spanish, that they were peasants; and they continued their march till they reached the battery, which was instantly attacked, and, after a smart struggle, carried, although the whole of the privateers' men were there to defend it. A few minutes only elapsed before the British boat's-crew found themselves surrounded by 200 French soldiers, against whom they defended themselves, till one of the heroes was killed, another severely wounded, and Mr. Dwyer himself shot through the shoulder: even then, how little intention they had of surrendering may be collected from the following anecdote:—'The man who had been wounded, who had lost his right eye, on recovering from his stupefaction, deliberately took a handkerchief from his neck, and binding it over the wound, said, 'Though I have lost one eye, I have still another left, and I'll fight till I lose that too. I hope, Mr. Dwyer, you will never surrender.' But their ammunition was now exhausted, and the enemy, emboldened by the cessation of their fire, rushed down upon them with their bayonets. Mr. Dwyer was too weak, from the loss of blood, to sustain a fight hand-to-hand; he and his men were borne down by such overwhelming numbers, and the enemy were soon in unresisted possession of the battery. In this assault, Mr. Dwyer received no less than seventeen bayonet wounds; and all his men, except one, were likewise most severely wounded. The admiration of the enemy at their invincible courage was without measure; the treatment they experienced from them was rather like that of grateful men to benefactors who have suffered for their sakes, than that of enemies to those who have fallen into their power. When they were conveyed to the head-quarters of the French general, Mons. Goudin, the same benevolence and solicitude, in acknowledgment of their bravery, were shewn to them by that officer and his suite. It was forgotten, in this instance, that men taken in war are prisoners: permission was given them to return to their ship, and the general sent an invitation to Captain Peyton to visit him on shore, that he might in person restore them, and congratulate him on having such brave men under his command. The invita-

tion was given with candour, and accepted with confidence. Captain Peyton dined with General Goudin, and remained on shore several hours."

The following anecdotes of Captain G. E. Watts, Lord George Stuart, and the Duke of Brunswick, are curious.

"Our narrative of the circumstances which led to the attack of the French troops in Hanover is contained in a letter from Captain Watts to one of his private correspondents. 'Captain Goate, assisted by myself, as already stated, having expelled the French force from Cuxhaven and Ritzbottle, was superseded shortly after in the command of the squadron by Lord George Stuart; and we have, under his lordship's auspices, just performed an exploit with that promptitude and decision which exalt English sailors in the estimation of the world, and which will, if I mistake not, form one of the adornments of our naval annals. The circumstances which preceded and finally led to this enterprise, as respects both Lord George Stuart and myself, are in themselves so interesting and peculiar, and it may be added ludicrous, that I cannot forego the gratification of fully detailing them. Gallantry in 'love and war,' in 'lady's bower and tented field,' are with the warrior one and indivisible. So sang the immortal troubadours, those chroniclers of the 'deeds of days of other years.' We had obtained the ascendancy over our rivals in the one, and it therefore became incumbent on us to equal or surpass them in the other. Amongst the number of those whose smiles proved magnetic, were the pretty Miss S. and her companion Miss N. Lord George and myself had just paid them a morning visit. The window of their drawing-room overlooked the main street of Ritzbottle; and while diligently employed in playing the agreeable, I by chance looked out, and was surprised by the sudden appearance of two mounted dragoons, with drawn sabres, dashing down the street, closely followed by others. Accosting Lord George, who was busily engaged in conversation with Miss S., I asked, 'Where have those German dragoons come from?' He did not notice the question, and I repeated it. He then turned to look; and his eye glancing on the lengthening column, the truth flashed on his mind. He sprang on his feet, vehemently exclaiming, 'We are surprised—the French are in the town, and we are all taken.' More appalling words never saluted my ears; nor was a delightful *tête-à-tête* ever more abruptly or disagreeably interrupted. We sought instant safety in flight: he one way, I another. My route lay through the garden, terminated by a palisade, which I mounted, and then leaped on what I took to be dry ground, but which proved to be a stagnant ditch, the water of which, evaporated by the summer heat, had left a residuum, which for consistence and odour might be likened to the most unutterable of abominations. I was absolutely so *enfoncé* as to be in danger of suffocation; but by dint of immense exertion I at length suc-

ceeded, by the aid of the luxuriant corn which grew on the banks, in extricating myself from this vilest of durances; and creeping forward, I lay down in the midst of the field, listening to the clattering of the horses' hoofs as they rang on the pavement; to the shouts of the assailants; and the scattered fire of their carbines and pistols, discharged in exchange for the fire of our outposts. To describe the train of disagreeable thought, nay of miserable feeling, which occupied my mind at this moment, is quite impossible. A more rapid moral transition from pleasure to pain, from happiness to misery, cannot be imagined. Instead of my day-dreams of victory, of glory, and promotion, Verdun, or Valenciennes, with its dungeon, and a lengthened imprisonment, appeared in withering and close perspective. Between me and my brig, whose flag I saw gallantly waving over the waters of the Elbe, at the distance of 2000 yards, was interposed, for aught that I knew, an entire French *corps d'armée*. It was indeed a blighting sight; and in the bitterness of the moment I was not only tempted to curse my own folly, but to anathematise all womankind, who had thus seduced me from my own element, and my own quarter-deck, on which I ought to have been standing, free and independent. In the midst of this bitter reverie the noise subsided, and the firing ceased. I ventured to look around me. All appeared tranquil. I became somewhat re-assured; and seeing two men in an adjoining field, I ventured to approach them. They gave me a plank to cross a stream. I asked by signs, and in English turned topsyturvy (which makes no bad German), what road the enemy had taken? They motioned that they had retreated, and demanded money from me at the same instant. Impressed by the belief that if we really were masters of the place, the men would not have had the hardihood to do this, I instantly made off, intending to skirt the town and gain the landing-place. In passing, I heard sounds which I thought familiar. I approached one of the lanes which traverse the main street, and there beheld!—conceive the emotion, if you can, with which I beheld!—our own dear, delightful, eccentric, and gallant Jacks, armed with pike, cutlass, and pistol, going it through the town, with all the celerity and animation of a fox-chase, in full cry,—“Forward, my boys!” “Have at the French rascals!” “D—n their eyes, we'll work them for this!” “And so we will, my brave lads,” I cried exultingly, bursting into the midst of them, and joining heart and soul in the enlivening chorus. My transport on this unexpected deliverance was only inferior to that of the reprieved criminal with the halter round his neck, and forcibly assured me how true it is, that perfectly to enjoy, we must first suffer. To account for this sudden transformation in the state of my affairs, few words will suffice. Intelligence of the enemy's entrance had quickly reached the squadron, together with the news that Lord George Stuart and Capt. Watts were taken prisoners. All the boats were instantly manned and armed, and a force of 300 seamen and marines landed for their rescue, whom Lord George had the pleasure of meeting at the landing place. His lordship, in his first flight, was accompanied up stairs by the pretty Miss S., who first suggested an asylum up the chimney, then under her bed, and finally in her bed. King Charles the Second, of amorous memory, often declared, that when in the midst of the oak, he “would not have kissed the bonniest lass in a Christendom;” and so, in like manner, had Miss S.,

all lovely as she was, offered to be his lordship's bed companion, at this critical moment, I verily believe he would have declined the overture. He made a better election; for, happening to observe a burgher's dress in one of the rooms, he put it on, sallied forth at the back door, and reached the landing place just in time to put himself at the head of his men, whom he was leading in pursuit when I joined, and cordially shook him by the hand. It would be difficult to say, whether his joy at our escape, or his merriment at my appearance, was the greatest. An hour before, I had been the meet inmate of a lady's boudoir; and now, covered from head to foot with filth and mire, I was untouchable, nay almost unapproachable, by any human being. Even Jack himself, with all his deference for his commander, was constrained to chuckle at the grotesqueness of my appearance. Heartily did I join in the laugh, merrily observing, that my condition was a fine illustration of the truism, that “from the sublime to the ridiculous is but a step!” “But what say you, my lord,” I added, “to our giving a practical commentary upon it to those fellows?”—pointing to the enemy's cavalry, about sixty in number, whom we saw drawn up on an eminence a few miles off. The proposition was hardly uttered, when it was assented to; Lord George observing, “I was just about to ask your opinion upon that point.” A halt was made, provisions were sent for, and then off we started in pursuit, determined, if possible, to serve out to our opponents a double portion of their own measure; and pretty well we executed our mission. . . . At daylight we all but caught every rogue of them napping: twenty minutes sooner, and the entire body, of both cavalry and infantry, would have been surprised in their cantonments: as it was, we sent them scampering, like the herd of swine filled with devils, in treble-quick time. It was my lucky lot to bear the most prominent part in the affair. With my own hands I struck the flag in the battery, after giving them a most glorious peppering in our advance, and subsequently by unspiking their guns, and bringing them to bear upon them in their retreat. We captured Mons. Le Murche, the leader of the detachment, and his gallant charger; and, in twenty-eight hours, from the commencement of these detailed events, I was, in spite of a severe wound, gaily and triumphantly prancing on that very pavement, and on that identical horse, which, with its rider, now my prisoner, had placed me in such jeopardy, and filled me with such consternation.”

In another letter to his friend, Captain Watts says—“It may with truth be asserted, that a more fortunate measure than our attack upon the enemy at Gessendorf, was never decided on. We have just assisted in rescuing the gallant Duke of Brunswick, with his corps of about 1800 men, from the most perilous condition. Excluded by Buonaparte from the terms of his late treaty with Austria, with which he had been acting as a partisan, he determined, rather than tamely submit to the despot, to attempt his retreat from the very heart of Germany, surrounded by enemies. In pursuance of this determination, he was forced to fight a battle every day, in one of which he captured 1200 prisoners: he stormed two towns which barred his progress; laid Leipzig itself under contribution; and finally arrived, closely pursued, on the banks of the Weser, four days after our defeat and dispersion of the enemy. By the flight of their armed vessels, and the destruction of their

battery, the river, upon which he embarked his men in small coasters, was left open, and he, by these means, made his way down to us, without further hindrance or molestation.”

We have only room for one more extract of this highly interesting correspondence. “When I got on board the *Mosquito*, I was told by Captain Goate, that the Duke had just arrived, and that he would introduce me to him, adding, ‘See, here he comes!’ ‘What?’ I asked, in unfeigned astonishment, ‘can that be the Duke of Brunswick?’ looking at a slight advancing figure, about five feet five inches high, with a sun-burnt countenance and light moustaches. He had a small foraging cap on his head, which, on my being introduced to him, he most courteously doffed. He was without his black jacket (the costume of his corps), his waistcoat thrown open, shirt-collar loose, throat bare, and wrists unbuttoned; presenting altogether a figure so unheroic, that I took him for one of the humblest of his followers. Having conversed in French with him for a short time, he expressed a wish to repose himself. Captain Goate naturally offered to escort him to his cabin; but this he declined. Simply asking for a flag, in which he enveloped himself, he lay down on the deck, between two guns, with his cap for a pillow upon one of the quoins. Perhaps no individual since the days of Swedish Charles ever endeared himself so greatly by his simplicity of manner, and rigid self-denial, as this gallant and persevering prince. Practising every abstinence, exposing himself to every hardship, braving every danger, and participating in every triumph, he is idolised by his followers, all of whom speak of him with rapture and enthusiasm.”

Our next extract exhibits the exploits of Capt. Coghlan, commonly called “Intrepid Jerry,” and which his introduction into the navy seems well to justify. The *Dutton East Indianman* was wrecked in 1796.

“During the height of the storm, and before boats of any description could venture out to her assistance, Mr. Coghlan, then scarcely sixteen years of age, plunged into the sea with a rope tied round his body, and succeeded in catching hold of two men, whom he conducted safely to the shore. After saving several lives in a similar manner, and at the imminent risk of being himself beaten to pieces against the rocks, Mr. Coghlan's strength failed him,—but not so his spirit. Perceiving that the wind had in some measure decreased, he then hastened to the Barbican at Plymouth, obtained a boat, with several volunteers, and instantly proceeded to the wreck, from whence many persons were taken, and conveyed to different pilot vessels which had begun to approach the citadel. It is supposed that, by Mr. Coghlan's exertions on this occasion, not less than fifty men were rescued from a watery grave, before a single boat from any of the men-of-war dared venture to his assistance,—so terrible was the state of the weather. Mr. Coghlan's heroic behaviour was fortunately witnessed by Sir Edward Pellew, now Viscount Exmouth, who soon afterwards offered him his patronage if he would consent to enter the navy.”

In 1800 he was a lieutenant. At the commencement of an action with a French ship, its commander, Mons. Pointe, hailed le Renard (commanded by our hero) and ordered her to ‘strike;’ upon hearing which Captain Coghlan took his trumpet, and coolly replied, “Ay! I'll strike, and d—d hard too, my lad, directly;” and amply fulfilled his promise.

“On the 11th Oct. following, Capt. Coghlan

captured la Bellone, privateer, of four guns and fifty men; and on the 28th May, 1806, la Diligente, a national brig, hauled down her colours to le Renard, without attempting the least resistance, although mounting fourteen long 6-pounders and two brass 36-pounder carronades, with a complement of 125 men. When taken on board le Renard, the French commander, Mons. Vincent Thévenard, was struck with the smallness of that vessel, and, with much *sang froid*, he requested permission to return to his late brig, that he might try his skill in fight; which, of course, Captain Coghlan laughed at. He then, with equal gravity, solicited a certificate, stating that he had not acted cowardly. Captain Coghlan replied—'No, I cannot do that; but I will give you one that shall specify you have acted prudently!'

With this characteristic touch we must cast anchor, though not without the intention of another sail with our friend Lieut. Marshall.

Recollections of Travels in the East, forming a Continuation of Letters from the East. By John Carne, Esq. Post 8vo. pp. 348. London, 1830. Colburn and Bentley.

THE Letters from the East, to which this volume is a sequel, were justly popular; for the author is not only an amiable, but an intelligent man, one who has seen a good deal of various countries, and a very pleasing writer. The new proof of his capacity and talent now before us consists of recollections of Syrian and Egyptian travel. He has visited the hill country of Juda, Tiberias, Galilee, the Jordan, Ajalon, and many a sacred spot; and, as it seems, partly from his own observations, and partly from what he has heard from others, produced the work to which we now wish to direct public attention. Not so eloquent as Chateaubriand, there is much grace in Mr. Carne's sketches; and, throughout the whole, a gentle and good feeling, which renders his book very agreeable. We begin our quotations with even an offensive scene at Mount Carmel, to show how these qualities prevail.

"It is one of the unhappy features of this land, that the richest feasts of the memory and fancy are often followed by the pressure of real evils. It was in vain to think of regaining our quarters on the sea-shore that night; we were at too great a distance: and we thought with regret of our comfortable quarters in the home of the Syrian, when we entered and looked around on the squalid hut, and its lawless inmates, where we were doomed to repose till morn. The cavern of the Kamschatdale had been quite as cleanly, and far more roomy, with the advantage also of a blazing fire, which we could not enjoy here. The night wind that entered through the open door was chill, and the rain now fell heavily without. We had wound our way, with some difficulty, in the dark, beside deep pools of water and pits on each side, ere we entered the hut, the only habitation the uncivil Arabs would give us. It consisted but of one long low apartment, excessively narrow; one half of its scanty width was occupied by a divan, formed of a raised earthen seat, of four or five feet high, without any covering. On this indulgent place we ascended, in order to have a part of the chamber exclusively to ourselves, and to escape from the rude and annoying crowd of natives who now thronged into the hut, and squatted themselves forthwith on the floor, pipe in hand. The clouds of smoke that slowly rose from their dark lips soon completely filled the apartment, and formed a dense shroud, through

which the line of Arabs who sat beneath, closely wedged against the wall, could be but dimly seen. In fact, we were almost blinded, and there was no remedy for the evil. Michelle made several attempts to light a fire on the wretched earthen floor, in order to boil a little tea for our supper, and at last succeeded; for we had been dinnerless during the day's progress. But unfortunately we found, to our dismay, that our stock of tea, which had been a real treasure during the journey, was entirely destroyed in the attempt to cross the river Kishon. It was our only hope; and Bruce's Arabs, in the desert of Sennaar, never grasped their leathern bottles with more despairing eagerness to drain the last drop of water, than we strove to find amidst the wet, tasteless, and sodden leaves, a sufficient portion to furnish forth our evening's refreshment. But it was in vain; and a piece of dry bread was our only solace. The senses, in truth, were wholly in fault here: the din of barbarous Arabic was enough to deafen us; and had the night blasts entered the open door with sweeping fury, it would have been a mercy in freeing us for a moment from the poisonous clouds of smoke. The fellows were insolent and rude, and, by their behaviour and discourse, had probably never seen a Christian lodged within their hamlet before. We had not expected, in the region of Carmel, to find a spot so unwelcome and insecure; for my knife and fork, the companions of many a wild journey, soon became a prey to their cupidity; and it was uncertain whether our remaining effects would not quickly follow. In fact, we were completely in their power; and they might have turned us out at night, had they so chosen, amidst the darkness, as desolate as was ever a martyr of old, pursued into these solitudes by the hand of persecution. The sheich, who might have kept his people in better order, was seated in the midst, with his long dirty pipe, and dingy white cloak and turban, as noisy and troublesome as the rest: his reign must have been but a sorry and confined one, for the hamlet consisted but of eight or ten huts, wretchedly built, and situated on a barren and shelterless part of the hill. On a sudden the sweet sound of a pipe was heard without, and the Arabs requested to send for the musician, who quickly after entered very willingly, and, for the prospect of a reward, began to exercise his powers, much to his hearers' satisfaction. He was a youth of the hamlet, the only one probably who had any peculiar skill in the way of music. Its effect, in this case, was certainly very pleasing, for it reduced our wild audience to instant and entire silence. Puffing the coarse tobacco from their mouths, and fixing their dark eyes on the musician, who was mounted beside us on the rude divan, they sat moveless against the wall, and the fearful discordance of tongues was over. The former played several wild and sweet airs on his pipe; for this simple instrument is an inmate of every Arab village or cottage in the land. As the daily employment of a great part of these peasants is in tending their flocks of sheep, or tilling their scanty fields, the pipe is carried with them to beguile their labour, as well as to cheer them in the evening hours after their return. It had now become late; we paid the musician, and let him depart, in the hope that the audience would depart also; but this was not yet to be: they lingered and smoked, as if their pipes were as interminable as the Turk's magic mahmoudi, which, as soon as spent, instantly left another in his eager hand. We lay down, however, at last, on our

earthen bed, unable to keep our eyes unclosed any longer, and soon fell asleep. The first break of morning was most welcome, and we quickly prepared to depart, after accepting a little milk for breakfast, and paying the sheich a good price for his miserable lodging. The rain still fell, and the mountain paths were almost impassable: leading our horses, we walked for some way along the declivities, and turned our backs with joy on our wretched resting-place. It was a sad and revolting picture of human nature: even in this remote and secluded hamlet, in a land where every man's hand was often against his fellow, sensual vice entered in its most repulsive form. The idea that solitude and distance from the contagion of mixed society and crowded towns, is favourable to purity of feeling and conduct, is contradicted by the state of things in most of the villages of the East.

"The remains of monasteries scattered in different parts often excited surprise that no zealous priest or pilgrim ever had the taste or enthusiasm to fix his residence on the mount of Tabor. While standing on its summit, during a previous part of the journey, we could not help remarking, what an enviable site it was for the residence of a recluse; and that in a cottage on such a spot, it would be easy to pass weeks and months without ennui; the objects over which it looked were so strange and various. On an eminence at some distance were the few poor cottages of the decayed village of Nain, at whose gate 'was carried out the only son of his mother, and she was a widow.' Yet even a cluster of rude cottages, inhabited by people the very reverse of all with which the imagination would have tenanted them, are invaluable, as they give an identity to the spot. From the situation of the village, on the declivity of the mountain, the scene of the miracle must have been rendered more striking, as the funeral procession passed slowly out of the gate down the steep, on the bold breast of which the remains of the place now stand. The inhabitants are between one and two hundred in number. And not very far from this village a spot was pointed out to us, that harmonised little with the softness or the associations of the scene—the village of Endor, where the sorceress dwelt who foretold the ruin of Saul and his family. A writer of romance would have fixed her residence amidst savage wilds, and all the terrors of Nature, rather than on the banks of a lovely stream, in the midst of luxuriant pastures and richly cultivated fields."

Among the characteristics of the Jews we select the following:

"There is one quality in which, like his ancestors, the Jew is by no means deficient, namely, in a proper taste and apprehension of the excellencies of wine. Does the stranger desire light wine, of fine quality, white or red, such as grows in the territory of Judea, or does he prefer the more potent and exquisite produce of Lebanon, they can both be procured at short notice; but it must be done secretly, otherwise the Turk would seize the hoard; and if he did not denounce the vender, would insist on sharing his cellar with him. The white wine of Jerusalem, as it is called, is of very good flavour, though rather sharp."

At Jerusalem, also, the author says—

"Among the ceremonies observed at the feast of Easter, that of washing the pilgrims' feet was one of the most curious. It took place in the evening, in the chapel of the convent. The superior had been dead some months, but his substitute officiated in his

stead: the number of candidates was much fewer than on former occasions—for this year the Armenians formed the most numerous party, the Catholics and Greeks hesitating to journey so far, on account of the perilous times. The pilgrims, of all ranks, were arranged in the church, each seated in a chair, with a small white cap on his head, his feet bare, and his countenance moulded into a state of devout expectation. The superior having exchanged the dirty rope with which he is generally girded for one of silk, from which a white towel is suspended, kneels down on a small footstool of white silk, and seizing the foot of the pilgrim, covered with the dust of so many memorable places, plunges it into a vessel of warm water. In this operation he is aided by two or three monks, who kneel on the cold pavement on each side of him. Mumbings and blessings are muttered all the time, in a low tone, by the superior's lips, and in a higher cadence by those of the zealous assistants, the pilgrims at the same time keeping up a kind of recitative in all possible keys. Most of these men had a sun-burnt, worn, and anxious appearance, as if they felt the enterprise in which they were engaged to be the most awful and important event of their lives—on which even the brightness of their future state in a great measure depended. In truth, it was a great undertaking to many of them, whose wives and families were at that moment in Spain, Russia, or Denmark, whither they must wend their weary way back again. This ceremony tends to exalt the poor devotees in his own estimation; for the superior having washed and carefully wiped the feet, kisses them ardently, and pronounces a benediction on their owner. Then all the monks of the convent come and kneel on the pavement, and press their lips also on the feet of the happy and enviable man. Then followed an excellent supper, in which the priests waited most attentively on their visitors: the table of the refectory was on this occasion particularly abundant, and the good wine was not spared. Cheerfulness and sociality quickly succeeded the dull ceremony; it was difficult to say whether the tongue of priest or pilgrim went the fastest. Many a tale was told, and hardship recounted, on one hand, and vigil and marvel related on the other,—till peril, privation, and distance, seemed to disappear from the thoughts of both. The most interesting hour was that, however, in which the marble pavement of the rotunda was covered with the crowd of devoted admirers. The light that was cast below was very brilliant, and shewed this concourse of wanderers from many nations, mingled with priests, monks, Turks, Arabs, and Syrians. The shewy dresses and weapons of the Osmanli, his calm and serene features and moveless attitude, were contrasted with the impassioned expression and lively gestures of those around, in their poor and religious garments. The women also of the different persuasions were there, all dressed in white; the looks of some bent on the ground, and the eyes of others wandering curiously on the various and animated scene. This was the hour of monkish triumph, as well as that of relics, flowers, and incensed objects of all kinds. Some drew nigh with rapid and eager footsteps, and with the air of men who were conscious that the end of their toils was before them. It was easy to see that others hesitated long ere they ascended the three marble steps, that seemed like barriers between them and their long-cherished hope. They knelt on the pavement, and turned an imploring

eye, not on the priest, for the priest was nothing here, but on the sacred chambers within, where the light fell, and whence hushed sounds issued; the slender pillar met their eye at the entrance, that marked the spot where the stone of the sepulchre was rolled away for ever. It would have been cruel to break on the blest illusion that then filled the minds of these people; it had been better to bid their necks bow to the cimeter, than tell them that this bright entrance had no resistless charm for guilt, no balm for remorse. One old man, whose hair and beard were white, and who seemed to have come from a very distant home, was observed to bend long beside the first marble step that conducted within. Numerous votaries passed him of both sexes, and one of the priests came and whispered in his ear some words of encouragement; but the old man still lingered, as if a long life of crime had then risen before him, or he doubted there could be mercy at so late an hour as this. It was not a little interesting to observe how changed were the looks and gestures of many of the people when they issued forth from the interior of the chamber. A triumphant smile was on the features of some, perhaps of more sanguine and buoyant spirits: the deep and settled dejection with which others had entered gave place to hope and serenity; the step was quick, the hands unclashed, and the eye no longer bent doubtfully on the floor. Mingled with these were very many who blended devotion and interest together in the strangest way: rogues in grain, on whose mind past things sat a little uneasy, but who had no idea of even coming here without making it turn to some future account. While their hands were clasped in exceeding sorrow, and their eyes uplifted, they held, fast clenched, many a pleasant and secret article of barter, that was to be embalmed by the same devotions and hallowed by the same rites as those by which their crooked spirits were to be purified."

Having said so much of Syria, we refrain from accompanying Mr. Carne through the last half of his volume, which relates to Egypt; but we are sure the reader will be gratified by its perusal.

Times Telescope, for the Year 1830. London, Sherwood and Co.

WE have always had a good word to say of this useful and respectable Annual, which, though not so fine as its later competitors, may boast of being more varied, and not less applicable to the passing affairs of life. We observe that some change has occurred in the editorship, with a feeling of regret; for however able the new director may be, we had much respect for the assiduity and talent of his predecessor. In the present volume we also observe, that our own very intelligent and zealous co-adjutor, who has long written the papers on celestial phenomena in the *Literary Gazette*, is the contributor of the whole portion devoted to astronomical science; and we are sure it could not be in fitter hands. The almanac division, the biographical and chronological sketches, the naturalist's diary, and the wood-cuts, &c. &c. are all deserving of praise, as a few miscellaneous extracts may serve to shew.

In January it is stated: "The following letter from M. Fintelmann, of Potsdam, to Mr. Loudon, will shew how the Prussians amuse themselves at this season of the year, and keep up an appearance of a perpetual summer even throughout the winter.—' Winter gardens, as

far as I know, exist no where else but in Prussia. In Potsdam we have only one, that of M. Voigt, very good and very highly kept; but at Berlin there are four, M. Teichmann's in the Thiergarten, Faust's and George's both within the town walls, and Moeve's on the Potsdam road. The original of these gardens was established by M. Bouché soon after the time of the general peace; but his garden is now quite neglected; and the leading establishment, ever since 1818, has been M. Teichmann's. These gardens are simply large green-houses, or what would be called in England orangeries, with paved floors, a lofty ceiling plastered like that of a room, and upright windows in front. The air is heated by stoves, which are supplied with fuel from behind. On the floor are placed here and there large orange-trees, myrtles, and various New Holland plants in boxes. The plants are mostly such as have a single stem of at least three or four feet in height, and round the stem and over the boxes a table is formed by properly contrived boards, so that the tree appears to be growing out of the centre of the table. These tables, which are sometimes round and sometimes square, are for the use of guests, either to take refreshments, or for pamphlets and newspapers. Sometimes on each table there is a circle of handsome odoriferous plants, such as hyacinths, narcissuses, mignonette, &c. in pots, round the stem of the plant; in other cases, there is no table, but the box is covered with handsome flowering plants; and in some parts of the floor, one handsome tree in the middle is surrounded by several smaller trees and plants, so as to form a mass, or clumps of verdure and flowers, such as we see in pleasure-grounds. The flowers which are generally found in these winter gardens throughout the winter are hyacinths, narcissuses, ranunculuses, tulips, crocuses, roses, heaths, camellias, acacias, epa-crises, correas, &c. There are also various climbers, curious or showy stove plants, pine apples in fruit, cactuses, &c., and sometimes even fruit-trees, the latter both in flower and in fruit. The proprietors of these gardens have generally small forcing stoves, for the purpose of bringing forward and keeping up their supplies. It is almost needless to say, that in these gardens or orangeries there are plenty of seats, and small movable tables, and generally music, a reciter of poetry, a reader, a lecturer, or some other person or party to supply vocal or intellectual entertainment; short plays have even been acted in them on the Sundays. In the evening the whole is illuminated, and on certain days of the week the music and illuminations are on a grander scale. In some of these orangeries also there are separate saloons with billiards, for ladies who object to the smoke of tobacco, for card playing, and for select parties. If you enter these gardens in the morning part of the day during the winter season, you will find old gentlemen with spectacles reading the newspapers, taking chocolate, and talking politics; after three o'clock you see ladies and gentlemen, and people of every description, sitting among the trees, talking or reading, and smoking, and with punch, grog, coffee, beer, and wine, before them. In the saloon you will see those gentlemen and ladies who cannot bear tobacco; and I ought to mention, that in some orangeries smoking tobacco is not allowed, and in others it is only permitted till a certain time in the day. When the audience leaves the theatre in the evening, you will find in M. Faust's garden a great number of well-dressed people of both sexes, who look in there before they go home, to see

the beauty of vegetation when brilliantly illuminated by artificial light, and to talk of the play and the players. I saw no garden in England, Scotland, or Ireland, that I could compare to these winter gardens; they appear to me very suitable to a capital town, though I do not think they would be much frequented by the people of London, who have not the same taste, nor the same leisure, for these kinds of amusements that the Berlin people have."

Jan. 29.—King George the Fourth's accession.

"There is a prediction preserved by the monkish annalists, which is said to have been delivered in the time of William the Conqueror, as an anathema, or curse; signifying, that no more than three monarchs should ever reign over this kingdom without some violent interruption. His present Majesty, by his accession, was the first that broke the spell, as the following will clearly shew. William I. William II. Henry I. Interrupted by the usurpation of Stephen.—Henry II. Richard I. John. Interrupted by the usurpation of Louis the Dauphin.—Henry III. Edward I. Edward II. Interrupted by the abdication and murder of Edward II.—Edward III. Richard II. Interrupted by the deposition of Richard II.—Henry IV. Henry V. Richard III. Interrupted by the usurpation of Henry Richmond.—Henry VII. Henry VIII. Edward VI. Interrupted by the election of Lady Jane Grey, and making King Henry's daughters illegitimate.—Mary I. Elizabeth. A foreign king called to the crown.—James I. Charles I. Interrupted by the Commonwealth.—Charles II. James II. Interrupted by the abdication of James, and election of a foreigner.—William III. Anne. Interrupted by Parliament appointing a foreigner.—George I. II. III. IV."

March 21. Mid-lent.—"On this day at Seville there is a usage, evidently the remains of an old custom. Children of all ranks, poor and gentle, appear in the streets fantastically dressed, somewhat like English chimney-sweepers on May-day, with caps of gilt and coloured paper, and coats made of the crusade bulls of the preceding year. During the whole day they make an incessant din with drums and rattles, and cry, 'Saw down the old woman.' At midnight, the parties of the commonalty parade the streets, knock at every door, repeat the same cries, and conclude by sawing in two the figure of an old woman, representing Lent. This division is emblematical of Mid-Lent."

"April 4.—St. Ambrose. He was born at Arles, in France, about 333, and in 374 was chosen bishop of Milan: he was violently opposed to the Arians; and died this day, in 397. The celebrated hymn *Te Deum*, which is still performed on all great occasions in Catholic countries, was composed by St. Ambrose when he baptized St. Augustine."

As the poetry is mostly selected, the foregoing must suffice for our peep through *Time's Telescope*.

Dr. Lardner's Cabinet Cyclopædia, Vol. II. Maritime and Inland Discovery, Vol. I.

THE very judicious prospectus of this Cyclopædia, which has been for some time before the public, is well calculated to excite a considerable interest in the volumes as they severally make their appearance. Among the contributors, we may repeat, are reckoned some of the most celebrated names in literature and science; and the view of Dr. Lardner as to the character of the works—of which, notwithstanding the teeming fecundity of the press, the

public still stands in need—is full of good sense and originality. He certainly deserves well of the community, not only for sketching the arrangement of the whole plan in so able a manner, but also in a still greater degree for his successful labours in securing such a combination of learning and ability.

The second volume of the series, being the first of the History of Geographical Discoveries, we have just perused, with more than ordinary pleasure. Among the subjects enumerated in the prospectus, this appeared to be one having a fair chance of popularity, but one, at the same time, very difficult to treat in such a way as to satisfy the judicious reader. Voyages and travels form a large item in our national library; they are decidedly the national taste, as might be expected among a great commercial people, whose commerce and correspondence extend to every quarter of the globe. Yet there has not heretofore existed in our language any connected and general view of this kind, within a moderate compass, of the progressive steps by which mankind have obtained a knowledge of the world, or, in other words, of the succession of discoveries brought about by war, commerce, or curiosity, by which the nations of the earth have gradually become acquainted with one another.

It is evident that the execution of such a task was a far more difficult matter than the drawing up of the history of any particular nation, or the sketching the outlines of any single science, whose truths are mathematically connected in the writer's judgment. Even the best informed must have had to seek for the materials, and to harmonise and arrange the details of a subject so widely ramified through every age and nation.

The volume before us is deserving of the highest praise on every account. It displays a great extent of accurate learning—is arranged with considerable judgment—abounds with acute views on many of the important questions it discusses—and the whole is enlivened by a spirited, often playful, always clear and nervous style. The first book treats of the geographical discoveries of the Greeks and Romans; and while perusing it we have frequently had occasion to admire the ingenuity and happy shrewdness of conjecture by which the author is often able to elucidate the difficulties of ancient writers. The expedition of Alexander the Great into India, and the navigation of the Persian Gulf by his commands, are described with animation, and with a juster appreciation of that great conqueror's real character than is usually to be found even in works of critical history. The hero on whom Pope rashly confers the title of "Macedonia's madman," was no less distinguished for his profound and comprehensive views of policy than for his boldness and ambition. Few have ever figured so conspicuously in the great drama of history whose success depended in a less degree on chance. The chapter on Ptolemy and the first intercourse between the Romans and Chinese is highly interesting; but the part which strikes us as most curious is the attempt to prove a connexion between the mythical traditions of the Greeks and Hindoos relating to the existence of an elysium or western paradise. The Hindoo legends, it appears, make frequent mention of a white island in the west, which they suppose to be the *Is'pura*, or abode of the gods: it is also said to be a triketra, or three-peaked island, from its containing the mountain thrones of Brahmah, Siva, and Vishnu. From this latter tradition, our au-

thor concludes that the Greeks gave the name Trinacrin to Sicily and other islands; and although he here expresses himself with a reserve approaching to obscurity, we are disposed to think a good deal of that opinion. But it is time to let him speak for himself.

"The Chinese philosopher, Confucius, taught that paradise is in the West; the same belief prevails in Thibet, and in all the countries professing the religion of Buddha or Fo. The Jews expected from the West the establishment of their new kingdom; it is not extraordinary, therefore, that the nations of Europe, whose languages bear positive evidence of a derivation from the same family of mankind as the Hindoos, should retain in popular superstition the same opinion, couched uniformly in similar expressions. Wherever the Indo-Teutonic nations, as they are called, have fixed themselves, we find white islands still looming in the West, and surrounded by white seas. Thus, to the westward of the Samoyeds, adjoining the Northern Ocean, is a white sea, so named, perhaps, in the first instance, by the Jots, a race of giants, as tradition testifies, of kindred origin with the Scandinavian Asi. They were totally exterminated by pestilence and famine. The Caspian has been always called the White Sea by the nations inhabiting its eastern shores, and it bears among them at present the Turkish name Akdings, which has that auspicious signification. The Turks also, from their first entrance into Asia Minor, gave the name of White Sea to the *Egean*. The word Baltic, likewise, in the Lithuanian tongue, signifies the white sea; and it deserves to be remarked, that the Sarmatian nations, while occupying a position between it and the Euxine, gave to the latter the natural correlative name of *Mormori*, or the Black Sea. This designation has been subsequently translated and adopted by other European nations, as well as by the Turks; the original Slavonian expression being at present confined to the Propontis, or, as it is corruptly called, the Sea of Marmara."

"The persuasion that the dwelling-place of happiness is in the West, may have exercised an important influence on the early migrations of mankind. The existence and the wide diffusion of such an opinion are clearly established; nor is there any reason to believe that it was grounded in positive tradition. But then it will be asked, why was Paradise supposed to be in the West? An answer to this question may be found in the constitution of the human being, who is always more disposed to receive profound impressions at the hour when the natural day is coming to a close, and contemplating with the finest sensibilities that most glorious of celestial phenomena, the setting sun. The Hindoos retain to the present day their old belief. The chalk with which the Brahmins mark their foreheads is from the west: they even pretend that it is brought over land from Britain. Yogees, followed by their trains of pilgrims, have attempted in modern times to reach the Hyperborean regions across Europe, and have even advanced as far as Russia; but the importunate curiosity by which they were assailed effectually subdued in every instance their piety and courage. In the west the primitive tradition is still remembered. The lakes and seas of Scotland and of Ireland have all their floating and holy islands. The *Inis Wen*, or white island of the Gaels, and the *Ynys y Cedeirn*, or island of the mighty ones of the Welsh, are still objects of hope and veneration. The most westerly group of the Hebrides, the Flannan islands, which are devoutly believed to be seven

in number, and are even laid down as seven in our maps, though only six are visible to the eyes of the sceptical, are said to have the virtue of disposing to prayer and religious meditation all who land upon them. The Arran islands, on the west of Ireland, are entitled the isles of the living, that is to say, of those who have returned to life; but the language of this general superstition was carried far beyond the shores of Europe. It is found among the Indians of North America, who fervently believe in the existence of a land of happiness in the west, beyond the ocean; but whether it belongs to them originally, or was introduced among them by the Scandinavian adventurers of the eleventh and twelfth centuries, it is impossible to determine."

From the second book, which treats of the geography of the Arabians, we find it difficult to select; but did our limits permit, we should be glad to extract the travels of Ibn Batuta, who, as our author justly remarks, "may be numbered among the most remarkable travellers of any age or country." We refuse ourselves, however, with less regret, the satisfaction of quoting a few pages from the *History of Maritime and Inland Discovery*, from the conviction that the volume itself will soon be in the hands of most of our readers. In conclusion, we cannot help observing, that if Dr. Lardner's *Cyclopædia* be continued as it has been begun, and the future volumes unite as much depth and elegance, as much amusement and valuable instruction, as the one now before us, this publication will almost constitute an epoch in the history of our popular literature.

The Family Library, No. IX. History of the Jews, 3d Vol. pp. 431. J. Murray.

IN this volume Mr. Milman concludes his extremely interesting *History of the Jews*, prefacing it with a defence against some allegations brought against him by newspaper critics and controversialists. Of the mistaken views attributed to him we took no notice, because we are convinced that no work of the kind can escape censure, where so many different doctrines are maintained by so many different men; and we consider it to be our business rather to speak to general character than to attempt the reconciliation of conflicting opinions. It is a huge waste of ink; and we really do not remember one instance of conviction following. We therefore proceed in our usual fashion, unseduced by the untempting spirit of theological disputation. Nearly the first hundred pages are occupied with the concluding events of the siege and destruction of Jerusalem by Titus. They are replete with fearful and bloody variety; but we take up the author in his later remarks, for our examples of his clear and powerful style.

"The political existence of the Jewish nation was annihilated; it was never again recognised as one of the states or kingdoms of the world. Judæa was sentenced to be portioned out to strangers—the capital was destroyed—the temple demolished—the royal house almost extinct—the high-priesthood buried under the ruins of the temple. Our history has lost, as it were, its centre of unity; we have to trace a despised and obscure race in almost every region of the world; and connect, as we can, the loose and scattered details of their story. * * * We must wander over the whole face of the habitable globe to gather the scanty traditions which mark the existence of the Jewish people among the different states of Asia, Africa, and Europe, where, refusing still to mingle their blood with any other race of mankind,

they dwell in their distinct families and communities, and still maintain, though sometimes long and utterly unconnected with each other, the principle of national unity. Jews in the indelible features of the countenance, in mental character, in customs, usages, and laws, in language and literature, above all in religion; in the recollections of the past, and in the hopes of the future; with ready pliancy they accommodate themselves to every soil, every climate, every gradation of manners and civilisation, every form of government; with inflexible pertinacity they practise their ancient usages—circumcision, abstinence from unclean meats, eating no animal food which has not been killed by a Jew, rarely intermarry, except among each other, observe the fasts and festivals of their church, and assemble wherever they are numerous enough, or dare do so, in their synagogues for public worship. Denizens every where, rarely citizens; even in the countries in which they have been the longest and most firmly established, they appear, to a certain degree, strangers or sojourners; they dwell apart, though mingling with their neighbours in many of the affairs of life. For common purposes they adopt the language of the country they inhabit; but the Hebrew remains the national tongue, in which their holy books are read, and their religious services conducted: it is their literary and sacred language, as Latin was that of the Christian church in the dark ages. The history of the modern Jews may be comprehended under three heads:—1st, Their literature; which, in fact, is nearly the same with that of their law and their religion,—the great mass of their writings being entirely devoted to those subjects. 2d, Their persecutions. 3d, Their industry. With regard to the first point, it would not be consistent with the popular character of our work to enter into it, further than as it has influenced the character and circumstances of the nation. The second will be too often forced upon our notice. At one period the history of the Jews is written, as it were, in their blood: they shew no signs of life but in their cries of agony; they only appear in the annals of the world to be oppressed, robbed, persecuted, and massacred. Yet still patient and indefatigable, they pursue, under every disadvantage, the steady course of industry. Wherever they have been allowed to dwell unmolested, or still more in honour and respect, they have added largely to the stock of national wealth, cultivation, and comfort. Where, as has been more usually the case, they have been barely tolerated; where they have been considered, in public estimation, the basest of the base—the very outcasts and refuse of mankind—they have gone on accumulating those treasures which they dared not betray or enjoy; in the most barbarous periods they kept up the only traffic and communication which subsisted between distant countries; like hardy and adventurous miners, they were always at work under the surface of society, slowly winning their way to opulence. Perpetually plundered, yet always wealthy; massacred by thousands, yet springing up again from their undying stock, the Jews appear at all times and in all regions; their perpetuity, their national immortality, is at once the most curious problem to the political inquirer—to the religious man a subject of profound and awful admiration."

Passing by the able discussion of these matters, and vivid descriptions of the condition of the Jews through long centuries, and in every land, we quote the following curious account

of one of the false Messiahs who have risen up from time to time, and kept alive the hopes of their nation.

"In 1666 the whole Jewish world, co-extensive almost with the globe itself, was raised to the highest degree of excitement by the intelligence of the appearance and rapid progress of a youth, who had appeared in Smyrna, and assumed the name and the authority of the Messiah. Sabbathai Sevi was the younger son of Mordechai Sevi, who first followed the mean trade of a poulterer at Smyrna, afterwards became broker to some English merchants. He was born in A. C. 1625. Sabbathai was sent to school, where he made such rapid progress in the Cabbala, that in his eighteenth year he was appointed a Hakim or Rabbi: he even then had many followers among the youth, and indeed among the elders, of the place, with whom he practised rigid fasts, and bathed perpetually in the sea. At twenty years old he married a woman of great beauty and rank among his people, but declined all conjugal connexion with her. The father cited him for this neglect of his duty: he was forced to give a bill of divorce. A second time he married; and a second time, on the same plea, the marriage was dissolved. Sabbathai announced that 'the voice from heaven' assured him that neither of these were the meet and appointed partners of his life. His partisans asserted that he was actuated by a holy desire of triumphing over human passion: his enemies gave a different turn to the affair—still his fame increased. He sometimes fasted from Sabbath to Sabbath, and bathed till his life was endangered: yet his beauty, which was exquisite, seemed daily to increase. His whole body was said to breathe a delicious odour, which the physician of the family, suspecting to be perfume, declared, on examination, to be a natural exhalation from the skin. He began to preach and announce himself openly as the Son of David; and had the boldness to utter, in proof of his divine mission, the ineffable Name, Jehovah. The offended Rabbins, horror-struck at this double crime, declared him worthy of death, and denounced him before the Turkish tribunal. Sabbathai took refuge in Thessalonica. There the Rabbins arose against him. He fled to Egypt; then to Jerusalem. As he passed by Gaza, he made an important proselyte, named Nathan Ben-Jamin, who, admitted trembling to his presence, declared, by the great Almighty and dreadful God, that he had seen the Lord in his chariot borne chariot, as Ezekiel of old, with the ten Sephiroth, murmuring around him like the waves of the sea: a voice came forth—'Your Redeemer is come; his name is Sabbathai Sevi. he shall go forth as a mighty one, in flames of wrath as a warrior; he shall cry, he shall roar, he shall prevail against his enemies,' (Isaiah xlii. 13). In Jerusalem Sabbathai preached and proclaimed himself the Messiah with such success that the Rabbins trembled before him, and the Elias of the new sect, Nathan of Gaza had the audacity to issue an address to the brethren of Israel, in which he declared, that before long the Messiah would reveal himself and seize the crown from the head of the Sultan, who would follow him like a slave. After residing thirteen years in Jerusalem, Sabbathai made a second expedition to Egypt, where he married again, by the account of his enemies, a woman of light character—by that of his partisans, a maiden designated as his bride by the most surprising miracles. She was the daughter of a Polish Jew, made captive by some marauding Muscovites. At eighteen years a

age she was suddenly seized from her bed by the ghost of her dead father, set down in a burying-place of the Jews, where she was found—told her story, and declared that she was the appointed bride of the Messiah. She was sent to her brother in Amsterdam: thence to Egypt. After passing three years more in Jerusalem, Sabbathai went openly into the synagogue, and proclaimed himself the Messiah. A violent commotion took place; the Rabbins launched their interdict against him: he fled to his native place, Smyrna. There the ban pursued him; but the people received him with rapture. One Anakia, a Jew of high rank, denounced him on the Exchange as an impostor. The unbeliever returned to his home, fell from his chair, and died. This singular accident was at once recognised as from the hand of God. The Rabbins feared to pursue their interdict, Sabbathai assumed a royal pomp; a banner was borne before him with the words, 'The right-hand of the Lord is uplifted.' He divided among his partisans the kingdoms of the earth: he named his two brothers Kings of Judah and Israel: he himself took the title of King of the Kings of the Earth. One man, of high rank, nearly lost his life for opposing the prevailing delusion. The head of the Rabbins was degraded: the vice-president openly espoused the party. The fame of Sabbathai spread throughout the world. In Poland, in Germany, in Hamburg, and Amsterdam, the course of business was interrupted on the Exchange, by the gravest Jews breaking off to discuss this wonderful transaction. From Amsterdam inquiries were sent to their commercial agents in the Levant; they received the brief and emphatic answer, 'Tis he, and no other.' In the mean time rich presents were poured in to the court of Sabbathai, and embassies were sent from the different communities of the Jews—some of these were detained three or four weeks before they could obtain an audience. His picture was surmounted by a crown of gold; the twenty-first Psalm was sung before him, and a public prayer offered in the synagogue, in which he was acknowledged as the Messiah. In all parts, as if to accomplish the memorable words of Joel, prophets and prophetesses appeared—men and women, youths and maidens, in Samaria, Adrianople, Thessalonica, Constantinople, and in other places, fell to the earth, or went raving about in prophetic raptures, exclaiming, it was said, in Hebrew, of which before they knew not a word, 'Sabbathai Sevi is the true Messiah of the race of David; to him the crown and the kingdom are given.' Even the daughters of his bitterest opponent, R. Pechina, were seized, as Sabbathai had predicted, with the same frenzy, and burst out in rapturous acknowledgment of the Messiah in the Hebrew language, which they had never learned. One wealthy Israelite, of Constantinople, more cautious than the rest, apprehending that this frenzy would bring some dreadful persecution against the Jews, went to the Grand Vizier, and requested a certificate, that he had never been a believer in the Messiah. This reached the ears of the partisans of Sabbathai, they accused their crafty opponent of treasonable designs against the Turks, brought forward false witnesses, and the over-cautious unbeliever was sentenced to the galleys. Among the Persian Jews the excitement was so great, that the husbandmen refused to labour in the fields. The governor, a man, it should seem, of unusual mildness, remonstrated with them for thus abandoning their work, instead of endeavouring to pay their tribute. 'Sir,' they answered with one

voice, 'we shall pay no more tribute, our Deliverer is come.' The governor bound them in an obligation, to which they readily acceded, to pay 200 tomans, if the Messiah did not appear within three months. But Sabbathai had now advanced too far to recede—his partisans were clamorous for his passing over to Constantinople, to confront the Grand Signior. He arrived, escorted by a vast number of his friends, and was received with the loudest acclamations by the Jews of Constantinople. The Sultan was absent; he demanded an audience of the Grand Vizier. The Vizier delayed till he had received instructions from his master. The Sultan sent orders that Sabbathai should be seized, and kept in safe custody. The Grand Vizier despatched an Aga and some Janissaries to the dwelling of Sabbathai, but the superstitious Aga was so overawed by the appearance of Sabbathai, 'bright,' he said, 'as an angel,' that he returned trembling and confounded to his master. Another Aga was sent, and returned in the same manner. Sabbathai, however, surrendered himself of his own accord; he was committed to the castle of Sestos, as a sort of honourable prison, where his partisans had free access to him. From thence he issued a manifesto, suspending the fast religiously kept on the 9th of August, on account of the destruction of Jerusalem, and ordered the day to be celebrated with the utmost festivity, as the birth-day of the Messiah Sabbathai Sevi. In Sestos he admitted a deputation from Poland into his presence, whom he astonished with his profound knowledge and ready application of the Cabbala. But there was in Constantinople one stubborn unbeliever, named Nehemiah, who for three days resisted all the arguments of the Messiah, and at the end openly proclaimed him an impostor. The partisans of Sabbathai rose in the utmost fury; and, when Sabbathai threatened his opponent with death, rushed forward to put his mandate in execution. The Rabbi burst out of the chamber, and fled, pursued by the adherents of Sabbathai—escape was hopeless, when he suddenly seized a turban from the head of a Turk, placed it on his own, and cried aloud, I am a Moslem—the Turks instantly took him under their protection, and he was sent to Adrianople to the Sultan, who summoned Sabbathai to his presence. Sabbathai stood before the Grand Signior; he was ignorant of Turkish, and a Jewish renegade was appointed as interpreter. But the man, before whom the awe-struck Agas had trembled, now before the majesty of the Sultan, in his turn, totally lost his presence of mind: when the Sultan demanded whether he was the Messiah, he stood in trembling silence, and made no answer. He had some reason for his apprehensions; for the Sultan made him the following truly Turkish proposal:—'That he should shoot three poisoned arrows at the Messiah; if he proved invulnerable, he would himself own his title. If he refused to submit to this ordeal, he had his choice, to be put to death, or to embrace Mahometanism.' The interpreter urged him to accept the latter alternative—Sabbathai did not hesitate long, he seized a turban from a page, and uttered the irrevocable words, 'I am a Mussulman.' The Grand Signior, instead of dismissing him with contempt, ordered him a pelisse of honour, named him Aga Mahomet Effendi, and gave him the title of Capidgi Basha. Consternation at this strange intelligence spread through the followers of Sabbathai; prophets and prophetesses were silent; but Sabbathai was daunted only by the death-denouncing

countenance of the Sultan. He issued an address to his brethren in Israel. 'I, Mahomet Capidgi Basha, make it known unto you, that God hath changed me from an Israelite to an Ismaelite. He spake, and it was done; he ordered, and it was fulfilled. Given in the ninth day of my renewal according to his holy will.' He most ingeniously extracted prophetic intimations of his change both from tradition and Scripture. In the book called Pirke Elieser it was written, 'that the Messiah must remain some time among the unbelievers.' From the Scripture the example of Moses was alleged, who 'dwelt among the Ethiopians;' and the text of Isaiah, 'he was numbered among the transgressors.' For some time he maintained his double character with great success, honoured by the Moslemites as a true believer, by the Jews as their Messiah. Many of the latter followed his example, and embraced Islamism. St. Croix had frequently heard him preach in the synagogue, and with so much success, that scarcely a day passed but Jews seized the turbans from the heads of the Turks, and declared themselves Mussulmen. His Polish wife died; he again married the daughter of a learned man, who was excommunicated, on account of the unlawful connexion, by the Rabbins. She also embraced Islamism. At length the Rabbins, dreading the total extinction of Judaism, succeeded in gaining the ear of the Sultan. The Messiah was seized, and confined in a castle near Belgrade, where he died of a colic in the year 1676, in the fifty-first year of his age. It might have been expected that his sect, if it survived his apostasy, at least would have expired with his death; but there is no calculating the obstinacy of human credulity: his followers gave out that he was transported to heaven like Enoch and Elijah; and notwithstanding the constant and active opposition of the Jewish priesthood, the sect spread in all quarters. His forerunner, Nathan of Gaza, had abandoned his cause on his embracing Islamism, and prophesied against him in Italy and Corfu. But it is the most extraordinary fact of all, that Nehemiah, his most vehement opponent, recanted his enforced Islamism, and after all embraced Sabbathaiism. A prophet of Smyrna proclaimed, that the Messiah would re-appear in 111½ years. But the doctrine of Michael Cardoso, which spread rapidly from Fez to Tripoli, and even to Egypt, was the most extravagant—the Son of David, he said, would not appear till all Israel were either holy or wicked—as the latter was far the easier process, he recommended all true Israelites to accelerate the coming of the Messiah, by apostatising to Mahometanism—numbers with pious zeal complied with this advice. Sabbathaiism still exists as a sect of Judaism; though, probably, among most of its believers, rather supported by that corporate spirit which holds the followers of a political or religious faction together, than by any distinct and definite articles of belief."

With this remarkable extract we shall leave this extremely interesting history to its fate—highly deserved and very extensive popularity.

Captain Dillon's Narrative.

(Third Notice: Conclusion.)

ON his course from New Zealand, Captain Dillon touched at Tonga, where, among other matters, he mentions being visited by "Maffee Heppay, about whom so much is said in *Mariner's Account of the Tonga Islands*. This lady was the wife of King Fenow, when that chief took the Port au Prince, at the Harpie Islands,

Dec. 1806. She afterwards adopted Mr. Mariner as her son, and, as he states himself, behaved with the greatest kindness. This trait in her character induced me (says Capt. D.) to invite her on board, and treat her with marked respect. As we were going to breakfast, she accompanied me to the gun-room, followed by a numerous train of female attendants. After breakfast I shewed her the first volume of Mr. Mariner's narrative, which contained a portrait of her adopted son, habited in the costume of the Friendly Islands. She immediately recognised the likeness, and exclaiming 'it is Tokey,* she wept bitterly."

Of another visitor we are told — "A female chieftain of considerable influence came to the ship's side to-day, and stated that, several years ago, an American ship anchored at the west part of this island, and was soon visited by the natives, among whom was her brother. That while on board, one of them stole an axe, which so alarmed the rest lest they might be involved in his punishment, that they leaped overboard to swim on shore. On this a boat was lowered from the ship's side, and one of the natives (her brother) was seized, brought on board, and conveyed to America. His friends had supposed for a long time that he was killed, till the sergeant of marines of the Port au Prince eased them of their concern, by informing them he had quitted America, gone to England, enlisted as a soldier, and was now big-drummer in the Duke of York's band. She earnestly requested to know if this account of her brother was true, which I was sorry not to be able to confirm, as I had not been in Europe for twenty years. I promised, however, to make inquiry."

On leaving the natives of Tonga, Capt. D. quotes an interesting account of their religion, manners, &c. &c. from Mariner's work, which is in comparatively few hands; but we rather accompany the captain's own original journal to the island of Rothuma, and thence to Tucopia and Mannicolo in September 1837. At Tucopia Capt. D. obtained several articles of European fabric, which had been brought thither from the Mannicolos; among the rest, a "silver sword-handle, with a large and a small cipher on one side of it, and on the other side one cipher, apparently resembling a P. surmounted with a crown;" and Capt. D. says — "the moment the silver handle of the sword was produced, both M. Chaigneau and I recognised it as belonging to the sword-guard taken by me to Calcutta in the St. Patrick, the ciphers exactly corresponding."

Speaking of the people, the writer remarks: "Some of the customs of the Tucopians are very singular. I was surprised at the number of females on Tucopia, as it was at least treble that of the males. On inquiry I found that all the male children of each female, except the first two, are strangled the moment after their birth. The reason they assign for this cruel policy is, that if they were allowed to live, the population of their little island would be so dense that its produce could not support them. Tucopia is only seven miles in circumference, but the soil is very luxuriant; yet there generally is a scarcity of provisions. They live chiefly on vegetable food, having neither hogs nor poultry, which are both plentiful on the other islands. They at one time had both, but they were voted common nuisances and exterminated by general consent. The hogs destroyed their plantations of yams, sweet potatoes, tara, and bananas. These, and the bread-fruit and cocoa-nuts, with fish, are what they

subsist on; but, owing to the deep water round the island, fish is by no means plentiful. * *

"The island is governed by one principal chief, with several petty ones, who act as magistrates. They live very peaceably, and never have any wars among themselves or with their neighbours. This probably may be attributed to their Pythagorean diet. But it does not restrain an intuitive propensity for thieving; and though the punishment in case of detection is very severe, the lower classes often rob each other's gardens and plantations. If the thief is caught, he is carried before one of the chiefs, and if convicted, his property and ground are forfeited to the individual he has robbed. A plurality of wives is allowed. The wives are exceedingly jealous of each other, and if the husband bestows his caresses more freely on one than another, the despised one takes it to heart so much, that she puts an end to her life, either by jumping out of a high tree or hanging herself: self-murder among the females is, for this reason, of daily occurrence. The marriage ceremony is curious. When a man wishes to take a wife, he first politely consults the lady he has placed his affections on, and if she consents and her parents agree, he sends three or four of his male friends at night, to take her away by force as it were. He then sends presents of mats and provisions to the relations of the bride, and invites them to a feast at his house, which usually lasts for two days. They are very particular as to the fidelity of married women. If a wife be caught sinning, she and her innamorato are put to death by the husband or his friends. But there is no restraint placed on the inclination of single females at all. Widows, however, are not permitted to take a second husband. When a child is born, the female friends of the father and mother assemble and bring presents to the *nouvelle accouchée*. All the female children are allowed to live. When a native dies, his friends come to his house, and with much ceremony roll him carefully up in a new mat, and bury him in a deep hole prepared near his dwelling. It is a very curious, and to those who disbelieve in the reappearance of departed spirits, an unaccountable fact, that the belief is universal among the inhabitants of the South-Sea Islands; and they surely could not have imbibed the idea from the new world. In each village on Tucopia there is a large building, called in their language the 'spirit house,' set apart for the use of disembodied spirits, which are supposed to reside in this building. On the approach of bad weather and thunder and lightning, which alarm the islanders extremely, they flock to the spirit house, and remain there while the storm continues, making offerings of cocoa-nuts, cava root, and other eatables. They imagine the storm is caused by the presiding spirit, who when he is displeased goes to the top of the highest land in the island, and manifests his wrath by raising a tempest. When he is appeased by the offerings, he returns to the 'hall of ghosts.'"

On arriving at Mannicolo, our enterprising countryman earnestly set about his inquiries concerning the wrecked vessels which his preceding voyage had induced him to believe were those of *Pérouse*. To the natives he was very liberal, in order to entice them to discover and bring to him all the memorials that remained of the *Boussole* and *Astrolabe*. These Mannicolans (we are informed) "are exactly the same description of people as inhabit Santa Cruz, which they call *Indenney*. Their implements of war, ornaments, clothing, &c. are all

similar. I had an interview with several of the Santa Cruz people in May 1826, and was able to form my comparisons accurately from personal observation. They are jet black, with woolly hair, which is combed backward and tied behind, being then bagged, and hanging from the top of the head to the pole of the neck, resting on the shoulders. They have a band about four inches wide girt round the waist, from which a bit of cloth, such as is used among the islands in the Pacific, is made fast in front, passed between the legs, and then attached to the girdle behind. They have necklaces of white shells, several bracelets of a white and black colour on the arm above the elbow, and generally from ten to twenty rings of tortoise-shell suspended from each ear. The gristle of the nose is perforated, and two white feathers of the domestic cock or hen introduced transversely. Their lips and teeth are red, which is occasioned by using lime and beetle-nut. They want but one appendage more, viz. a pair of horns, to complete the appearance of his infernal majesty, as represented in the picture-shops of London, for they are already furnished with a tail in the Fan-palm, which they thrust into their belts behind, and which tends not a little to heighten the resemblance."

Of the fate of the unfortunate *Pérouse*, an old chief, on being interrogated, furnished the following intelligence:—

"Q. 'Have you ever seen any white men before?' A. 'No.'—Q. 'Did not you see the people who built the ship at Païow?' A. 'No. I live at this side of the island, and we are constantly at war with the people residing at Païow and Wannow. The chief who built the ship at Païow wore clothes like you.' The Research, be it recollected, was at this time on the east side of Mannicolo; Wannow is on the west side. Q. 'How were the ships lost?' A. 'The island is surrounded by reefs at a distance off shore. They got on the rocks at night, and one ship grounded near Wannow, and immediately went to the bottom.'—Q. 'Were none of the people from this ship saved?' A. 'Those that escaped from the wreck landed at Wannow, where they were killed by the natives. Several also were devoured by the sharks, while swimming from the ship.'—Q. 'How many people were killed at Wannow?' A. 'Two at Wannow, two at Amma, and two more near to Païow. These were all the white men who were killed.'—Q. 'If there were only six white men killed on shore, how, or from whence, came the sixty skulls that were in the spirit-house at Wannow, as described by Ta Fow, the hump-backed Tucopian, and others?' 'These were the heads of people killed by the sharks.'—Q. 'But would not the sharks eat the heads as well as the bodies of the white men?' No answer.—Q. 'How was the ship lost near Païow?' A. 'She got on the reef at night, and afterwards drifted over it into a good place. She did not immediately break up—for the people had time to remove things from her, with which they built a two-masted ship.' Q. 'How many moons were they in building it?' A. 'Plenty of moons.'—Q. 'How did they procure any thing to eat?' A. 'They used to go into the *tara* fields and pull up the roots, and then plant the tops for a new crop. After they sailed away, the people put their fields in order again.'—Q. 'Had these people no friends among the natives?' A. 'No. They were ship spirits; their noses were two hands long before their faces. Their chief used always to be looking at the sun and stars, and beckoning to them. There was one

* Tokey is the name by which Mr. Mariner is known in the Friendly Islands.

of them who stood as a watch at their fence, with a bar of iron in his hand, which he used to turn round his head. This man stood only upon one leg.' This last answer must import that the cocked-hats worn by the officers were mistaken by the natives for natural appendages to their heads; the chief beckoning to the sun and stars, the officer taking astronomical observations; and the man on one leg at the fence with the bar of iron in his hand, a sentinel with his musket. In order to ascertain if the cocked-hats caused the enormous addition ascribed by the natives to the Frenchmen's noses, I sent for my cocked-hat, put it on, and inquired if my nose was similar to the white men's noses at Paiow—but could obtain no answer to my query."

In this island "snakes as long as a Tucupian canoe (about twenty feet), and as thick as a man's arm, are numerous in the woods and jungles: they will boldly attack a man. The poison with which the natives tip their arrows is not a gum, but a composition made into a gummy consistence. It is manufactured from the fruit of a tree of a globular shape, pulled from the bough, and the inside scraped out with a shell; it is then mixed with lime and betel-nut, also scraped as the first; the whole mass is then kneaded by the hand into the consistence of a tough gum, and in this state put upon the arrows, which are then rubbed over with a nut that gives them the red appearance. These arrows are supposed by the islanders to retain their poisonous qualities for several years. There are a few fowls and pigs domesticated about the native houses, but no dogs upon the island. There are also several streams of water, where a few wild ducks resort. The trade between Tucopia and the Mannicolas consists chiefly in an exchange of *tappar* (the cloth peculiar to the South Sea Islands), manufactured at Tucopia, with some fine mats, for which the Mannicolas barter an inferior kind of pearl-shell, shell ornaments for the arms, head, and neck; also necklaces of a shell resembling the cowry shells of the Maldives, near Ceylon, in the East Indies, and the bows and arrows of the Mannicolas—which last, however, are not used in Tucopia, where the people are peaceably inclined, and wage no wars, either foreign or domestic. For a number of years the Tucupians have been supplied with iron, china-plates, small brass bells, glass bottles, beads, and other articles of a similar nature, from the Mannicolas, who obtained them from the wrecked French ships."

At the island itself, Captain D. now collected a large carpenter's maul and a silver gravy-spoon, of French manufacture, with four stamps upon the shank; and of which he says: "the upper part of the handle seemed to have had from two to three inches broken off, and the spoon itself was somewhat battered. I could clearly discover the stamp next to the head to be a P, with part of a flower underneath; the next stamp to this was a crown, with a flower underneath; the third I made out to be a crown, with a figure attached, to me unintelligible; and the fourth I could not decipher. Mons. Chaigneau discovered among the ciphers a fleur-de-lis, and was clearly of opinion, from its shape and fashion, that the spoon was of French manufacture. Shortly after, my second officer purchased out of a canoe part of the brass circle of a globe, with about one-third broken off:"—and other articles of copper, iron, shot, &c. &c.

Proceeding to barter for similar articles, Capt. D. farther procured a small brass mortar,

many copper cooking utensils, &c. and a silver vessel, "weighing from 16 to 20 ounces, of an elliptical shape, somewhat resembling a sauce-boat, with the fleur-de-lis stamped upon it in two different places, besides other ornamental flowers.—1 small brass bell, diameter $8\frac{1}{2}$ inches, without a tongue, having three fleur-de-lis cast upon it; 1 large brass ship's bell, $12\frac{1}{2}$ inches in diameter, with a piece broken out of the head, and without a tongue. Upon the front of this bell were cast the holy cross erect, between the Virgin Mother and the image of a holy man bearing a small cross upon his shoulders. On the back were three images, circumscribed in an ellipsis, with the sun shining over them, who seem to be the Virgin Mother, the Saviour, and St. John. On all these casts there are letters, which, for want of a proper magnifier, I could not make out. To the right of the large cross are the following words—*Bazin m'a fait*—'Bazin made me.'"

But the most confirmatory of all these documents was the bottom of the candlestick, with arms engraved upon it, of which we gave an engraving in the *Literary Gazette*. Part of a ship's stern was also found, which, "when complete, exhibited the national arms of France. Its length was 4 feet and $\frac{1}{2}$ an inch; breadth $13\frac{1}{2}$ inches. It was placed upon its edge to barricade the passage, for the double purpose of keeping the pigs out and the children in the house."

While trafficking for this plank and other articles, Capt. D. states—"M. Chaigneau was busily engaged rummaging the deserted houses, in one of which he found a bag containing something bulky. His curiosity was excited, and anxious to satisfy it, he explored the contents, which to his surprise was nothing less than a preserved human skull: whether native or European could not be decided, though probably it was that of some unfortunate mariner."

But we have quoted enough to lead the public to concur with our author when he declares, "There being now no longer any room to doubt that the unfortunate French navigator, whose unknown fate remained for so many years enveloped in mystery, perished on Mannicolo,—I have resolved to give it the name of 'La Pérouse's Island.'—By the natives' account (he adds) this island was never visited by Europeans, either before or since they were wrecked till now."

The narrative of the homeward voyage is entertaining and curious; but we cannot go more at length into this review, except to notice the conclusion of Capt. Dillon's zealous and honourable enterprise, at Paris, last spring.

"The articles (he tells us) to be presented to his Majesty the King of France having been shipped on a steam-vessel, I proceeded with them for Calais on the 1st of February. I arrived at Paris on the 6th, and delivered them to the Baron Hyde de Neuville; who, on taking charge of them, informed me that they were to be placed in a cenotaph to be erected in a new museum, dedicated to the Dauphin, with an inscription describing their loss and recovery. On the 22d of February I received a letter from his Excellency the Minister of Marine, informing me that his most Christian Majesty Charles X., as a mark of his royal approval of my services, was pleased to confer on me the order of knighthood, in the grade of Chevalier of the Legion of Honour, with a sufficient sum in cash to defray the expenses of my voyage to Europe; also an annuity of four thousand francs for my own life, and half that amount to my family in case they should survive me. I returned my most grate-

ful thanks to this illustrious prince for his generous condescension in thus noticing and approving of my services. On Monday the 2d of March following I was taken to the French court by his Excellency the Minister of Marine, and had the honour of being presented to the king, who received me very graciously, and conversed with me in the English language, which he speaks fluently, on the subject of my voyage. He appeared to be perfectly well acquainted with the history of la Pérouse's expedition, and addressed several very judicious questions to me regarding the circumstances attending the loss of that celebrated navigator. With an anxiety creditable to his feelings, he inquired what was my opinion as to the probability of any of the crew being yet alive on the Solomon Islands? After an interview of half an hour I was allowed to retire, at which time this most amiable monarch made use of the following obliging expression—"Good bye, Captain Dillon: I thank you." I expressed my gratitude for his majesty's consideration for myself and family, and withdrew. While at Paris, I met several times with the Viscount Lesseps, who is the only person of the Count de la Pérouse's expedition now known to be alive. He was attached to the expedition for twenty-six months, and was landed at Kamachatka by the commander, for the purpose of conveying to France the charts, and accounts of the voyage, up to that period. This gentleman was between twenty-three and twenty-four years old when he joined the expedition: he is now sixty-four, and appears active, strong, and in good health. * * *

I accompanied this nobleman one day to the Admiralty for the purpose of viewing the relics procured by me at Mannicolo, which he examined minutely. The piece of board with the fleur-de-lis on it, he observed, had most probably once formed a part of the ornamental work of the Boussole's stern, on which the national arms of France were represented, as she was the only one of the ships bearing such an ornament. The silver sword-handle and silver spoon he also examined, and said that such swords were worn by the officers of the expedition, and that it was not unlikely the guard and spoon belonged to him, as he had left such articles on board the expedition, considering them burthensome on his long journey over snows, deserts, mountains, and through the wilds of Siberia. With regard to the brass guns, having looked at them attentively, he observed that the four largest were such as stood on the quarter-deck of both ships, and that the smallest gun was such as they had mounted in the long-boats when going on shore among the savages. On noticing the small mill-stone, he turned round suddenly and expressed his surprise, observing, "This is the best thing you have got: we had some of them mounted on the quarter-deck to grind our grain." It may be recollected by those who have read the account of la Pérouse's voyage, that it is said, "The mill-stones, when wrought by hand, were found not to answer well. Captain de Langle, of the Astrolabe, improved on them, and got them to work by sails on board his ship, somewhat similarly equipped to wind-mills on shore."

Yet Capt. D'Urville took no more notice of Dillon's voyage than if it had never been performed: *n'importe*, as we say at Dunkirk—our three reviews of him will cause his perseverance and success to be universally known and appreciated.

Dr. Arnot's Elements of Physics. Vol. II.

[Third notice: Conclusion.]

THE value we attach to this volume warrants our excess in giving it a *third* notice: but there is interest and information in all that follows.

Animal Heat.—"Each species of animal has a peculiar temperature natural to it, and in the diversity are found creatures fitted to live in all parts of the earth, what is wanting in internal bodily constitution being found in the admirable protecting covering which nature has provided for them—covering which grows from their bodies, with form of fur or feather, in the exact degree required, and even so as in the same animal to vary with climate and season. Such covering, however, has been denied to man; but the denial is not one of unkindness:—it is the indication of his superior nature and destinies. Godlike reason was bestowed on man, by which he subjects all nature to his use, and he was left to clothe himself."

Light.—"The phenomena of light and vision have always been held to constitute a most interesting branch of natural science; whether in regard to the beauty of light, or its utility. The beauty is seen spread over a varied landscape—among the beds of the flower-gardens, on the spangled meads, in the plumage of birds, in the clouds around the rising and setting sun, in the circles of the rainbow. And the utility may be judged of by the reflection, that had man been compelled to supply his wants by groping in utter and unchangeable darkness, even if originally created with all the knowledge now existing in the world, he could scarcely have secured his existence for one day. Indeed, the earth without light would have been an unfit abode even for grubs, generated and living always amidst their food. Eternal night would have been universal death. Light, then, while the beautiful garb of nature, clothing the garden and the meadow—glowing in the ruby, sparkling in the diamond—is also the absolutely necessary medium of communication between living creatures and the universe around them. The rising sun is what converts the wilderness of darkness which night covered, and which to the young mind, not yet aware of the regularity of nature's changes, is so full of horror, into a visible and lovely paradise. No wonder then, if, in early ages of the world, man has often been seen bending the knee before the glorious luminary, and worshipping it as the God of Nature. When a mariner, who has been toiling in midnight gloom and tempest, at last perceives the dawn of day, or even the rising of the moon, the waves seem to him less lofty, the wind is only half as fierce, sweet hope beams on him with the light of heaven, and brings gladness to his heart. A man, wherever placed in light, receives by the eye from every object around—from hill and tree, and even a single leaf—nay, from every point in every object, and at every moment of time, a messenger of light to tell him what is there, and in what condition. Were he omnipresent, or had he the power of fitting from place to place with the speed of the wind, he could scarcely be more promptly informed. And even in many cases where distance intervenes not, light can impart at once knowledge which, by any other conceivable means, could come only tediously, or not at all. For example, when the illuminated countenance is revealing the secret workings of the heart, the tongue would in vain try to speak, even in long phrases, what one smile of friendship or affection

can in an instant convey;—and had there been no light, man never could have been aware of the miniature worlds of life and activity which, even in a drop of water, the microscope discovers to him; nor could he have formed any idea of the admirable structure belonging to many minute objects. It is light, again, which gives the telegraph, by which men converse from hill to hill, or across an extent of raging sea—and which, pouring upon the eye through the optic tube, brings intelligence of events passing in the remotest regions of space."

Velocity of Light.—"The eclipses of the satellites or moons of the planet Jupiter had been carefully observed for some time, and a rule was obtained which foretold the instants in all future time when the satellites were to glide into the shadow of the planet, and disappear, or again to emerge into view. Now it was found that these appearances took place 16½ minutes sooner when Jupiter was near the earth, or on the same side of the sun with the earth, than when it was on the other side; that is to say, more distant from the earth by one diameter of the earth's orbit, and at all intermediate stations the difference diminished from the 16½ minutes, in exact proportion to the less distance from the earth. This proves, then, that light takes 16½ minutes to travel across the earth's orbit, and 8½ minutes for half that distance, or to come down to us from the sun. The velocity of light, ascertained in this way, is such, that in one second of time, viz. during a single vibration of a common clock pendulum, it would go from London to Edinburgh and back 200 times, and the distance between these is 400 miles. This velocity is so surprising, that the philosophic Dr. Hooke, when it was first asserted that light was thus progressive, said he could more easily believe the passage to be absolutely instantaneous, even for any distance, than that there should be a progressive movement so inconceivably swift. The truth, however, is now put quite beyond a doubt by many collateral facts bearing upon it."

Refraction of Light.—"On account of this bending of light from objects under water, there is more difficulty in hitting them with a bullet or spear. The aim by a person not directly over a fish must be made at a point apparently below it, otherwise the weapon will miss it by flying too high. The spear is sometimes used in this country for killing salmon, but is a common weapon among the islanders of the Atlantic and Pacific Oceans for killing the albacore; the use of it, like that of the fly-hook in England, affording to the fishermen good sport as well as profit. The author once with much interest witnessed at St. Helena this employment of the spear. A small fish previously half-killed, that it might not try to escape, was every minute or two thrown upon the water as a bait, in the sight of perhaps a hundred great albacores, greedily waiting for it at one side below, and knowing the danger to which they exposed themselves by darting across to seize it. Some albacore, bold enough, soon made at the mouthful, apparently with the speed of lightning, but yet with speed which did not save him—for every now and then the thrown spear met the adventurer, and held him writhing there in a cloud of his death-blood. After a victim so destroyed, the scene of action was changed."

The Eye.—"The nature of the eye as a camera obscura is beautifully exhibited by taking the eye of a recently killed bullock, and after carefully cutting away or thinning the

outer coat of it behind, by going with it to a dark place and directing the pupil towards any brightly illuminated objects; then through the semi-transparent retina left at the back of the eye may be seen a minute but perfect picture of all such objects—a picture, therefore, formed on the back of the little apartment or camera obscura, by the agency of the convex cornea and lens in front. Understanding from all this that when a man is engaged in what is called looking at an object, his mind is in truth only taking cognizance of the picture or impression made on his retina, it excites admiration in us to think of the exquisite delicacy of texture and of sensibility which the retina must possess, that there may be the perfect perception which really occurs of even the separate parts of the minute images there formed. A whole printed sheet of newspaper, for instance, may be represented on the retina on less surface than that of a finger-nail; and yet not only shall every word and letter be separately perceivable, but even any imperfection of a single letter. Or, more wonderful still, when at night an eye is turned up to the blue vault of heaven, there is portrayed on the little concave of the retina the boundless concave of the sky, with every object in its just proportions. There a moon in beautiful miniature may be sailing among her white-edged clouds, and surrounded by a thousand twinkling stars,—so that to an animalcule supposed to be within and near the pupil, the retina might appear another starry firmament with all its glory. If the images in the human eye be thus minute, what must they be in the little eye of a canary-bird, or of another animal smaller still! How wonderful are the works of nature!"

Duration of Impressions on the Retina.—"Any impression of light made upon the retina lasts for about the sixth of a second. Hence when the burning end of a stick is made to describe any line or curve, its path becomes a line of light; and if it revolve in a circle six times in a second, that circle will appear to the eye a complete circle of fire. The polished end of an elastic wire fixed by its other end in a block of wood being made to vibrate, similarly forms a line or curve of light. A harp-string while vibrating as it sounds, appears like a flat riband. Lightning or other meteor darting across the sky, although in fact but a moving luminous point, is generally thought of as a long line of light: the term forked lightning has reference to this prejudice. The same remark applies in a degree to a sky-rocket in its rapid ascent. Two or more colours painted separately on the rim of a wheel which is made to turn rapidly, appear to the eye to be as completely united as if they were really mixed:—it has been already explained how patches of the various colours of the rainbow mixed in this way form white light. If on one side of a card a little bird be painted, and on a corresponding part of the other side a cage; then on making the card turn rapidly by twisting between the fingers two threads fixed to its opposite edges, the little bird will appear to be imprisoned in the cage: or, again, if a pensive Juliet sitting in her bower occupy one side of the card, and a longing Romeo the other, by the magic turn of the threads the passionate lovers may instantly be brought together. Dr. Paris displayed taste and an amiable ingenuity in designing this toy with great variety of subjects."

A Painting.—"If the rays of light coming to the eye through a plate of glass, from objects seen beyond it, could leave marks in the glass

at the points where they passed, and marks capable of giving out the same kind of light as caused them, there would be formed upon the glass a representation or picture of the objects formerly viewed through it, and that picture would be so perfect, that when held before the eye, it would form on the retina an image or images the same in almost all respects as the objects themselves had done; for from the different points of the glass, light would dart to the eye in the very same directions pursued by that originally darted from the objects. Now the art of painting seeks so to dispose lights, shades, and colours, on any plane surface, as to produce the sort of representation of objects here contemplated, while the picture-frame has to recall the window-frame or edge of the plate of glass through which the true scene is supposed to be viewed."

Foreshortening.—"Painters are not only careful to foreshorten correctly all the objects which they portray, but they often avail themselves of the principle to produce most striking effects. For instance, Martin in many of his beautiful designs, by judicious foreshortening, has exhibited miles in extent of gorgeous architecture and of armed men, on a space of canvass that would seem scarcely more than sufficient to receive a few figures: he has made a single magnificent pillar or accoutred warrior, placed in the foreground, become the type which first fills the mind with admiration, and then sends it along the retiring lines of beautiful perspective, where every tip or edge renews the first impression. A man lying on a table or a bed nearly as high as the eye, with his feet towards the spectator, is foreshortened into a roundish heap, of which the soles of the feet hide the greater part. This is the description of the painting which has been called the miraculous Entombment of Christ; and it is because an unreflecting spectator moving sideways with the expectation of seeing more of the body, still sees only the soles of the feet, and may suppose the body turned round so as to front him, that the painting has received its appellation. For nearly the same reason the eyes of a common portrait may seem to follow a spectator to whatever part of the room he goes. A rifleman represented as taking aim directly in front of the picture, will seem to have in his power every spectator standing in the room; for, as in the case of the miraculous entombment, every spectator present will feel as if he alone could see the picture as all see it. To terrify young ladies, a little arch Cupid has ingeniously been represented with his arrow pointed directly at them, and just ready to let it slip from his bended bow—and oh, how they are terrified!"

Apparent Size and Distance.—"The celebrated Spectre of the Brocken, among the Hartz mountains, is a good illustration of our present subject. On a certain ridge, just at sun-rise, a gigantic figure of a man had often been observed walking, and extraordinary stories were related of it. About the year 1800 a French philosopher went with a friend to watch the phenomenon; but for many mornings they had paraded on an opposite ridge in vain. At last, however, they discovered the monster, but he was not alone; he had a companion, and, singularly, he and his companion sped all the motions and attitudes of the observer and his companion: in fact, the spectres were merely shadows of the observers, formed by the horizontal rays of the rising sun falling on the morning fog which hovered over the valley beyond; but because the shadows were very faint, they were deemed distant, and therefore seemed men walking on the opposite ridge;

and because a comparatively small figure seen near, but supposed distant, appears of gigantic dimensions, these shadows were accounted giants."

Conclusion.—"The truths now positively ascertained with respect to the nature of light and vision, are perhaps those in the wide field of human inquiry which, acting on ordinary apprehension, most forcibly place the individual as it were in the presence of Creative Intelligence, and awaken the most elevated thoughts of which the human mind is capable. Had there been no light in the universe, all its other perfections had existed in vain. Men placed on earth would have been as human exiles with their eyes put out, abandoned on an unknown shore, of climate and productions totally new to them: every movement might be to destruction, for their perceptions would be limited by the length of their arms, and of their fearful groping steps; and the wretched beings, separating when impelled by hunger to search for food, would probably scatter to meet no more. But the material of light exists, pervading all space; and certain impressions made upon it in one place rapidly spread over the universe, the progressive impression being called a ray or beam of light. The beams of light, then, from all parts coming to every individual, may be regarded as supplementary arms or feelers belonging to the individual, and which reach to the end of the universe; so that each person, instead of being as a blind point in space, becomes nearly omnipresent. Then these limbs or feelers have no weight, they are never in the way, they impede nothing, and they are only known to exist when their use is required! But this miracle of light would have been totally useless, and the lovely paradise of earth would have been to man still a dark and dreary desert, had there not been the twin miracle of an organ of commensurate delicacy to perceive the light, viz. of the eye; in which there is the round cornea of such perfect transparency, placed exactly in the anterior centre of the ball, (and elsewhere it had been useless); then exactly behind this, the beautiful curtain the iris, with its pupil dilating and contracting to suit the intensity of light; and exactly behind this again, the crystalline lens, having many qualities which only complex structure in human art can attain, and by the entering light forming on the retina beautiful pictures or images of the objects in front,—the most sensible part of the retina being where the images fall. Of these parts and conditions, had any one been otherwise than as it is, the whole eye had been useless, and light useless, and the great universe useless to man, for he could not have existed in it. Then, further, we find that the precious organ the eye is placed, not as if by accident, somewhere near the centre of the person, but aloft on a proud eminence, where it becomes the glorious watch-tower of the soul; and, again, not so that to alter its direction the whole person must turn, but in the head, which, on a pivot of admirable structure, moves while the body is at rest; the ball of the eye, moreover, being furnished with muscles which, as the will directs, turn it with the rapidity of lightning to sweep round the horizon, or take in the whole heavenly concave. Then is the delicate orb secured in a strong socket of bone, and there is over this the arched eyebrow as a cushion to destroy the shock of blows, and with its inclined hairs to turn aside the descending perspiration which might incommode; then is there the soft and pliant eyelid, with its beauteous fringes, incessantly wiping the polished surface, and spreading over it the pure moisture poured out by the lachrymal glands above, of which moisture the superfluity, by a fine mechanism, is sent into the nose, there to be evaporated by the current of the breath. Still further, instead of there being only one so precious organ, there are two, lest one, by accident, should be destroyed; but which two have so entire a sympathy, that they act together as only one more perfect: then the sense of sight continues perfect during the period of growth from birth to maturity, although the distance from the lens to the retina is constantly varying, and the pure liquid which fills the eye, if rendered turbid by disease or accident, is, by the actions of life, although its source be the thick red blood, gradually restored to transparency. The mind which can suppose or admit that within any limits of time, even a single such organ of vision could have been produced by accident, or without design; and still more, that the millions which now exist on earth, all equally perfect, can have sprung from accident; or that the millions of millions in past ages were all but accidents, and that the endless millions throughout the animate creation, where each requires a most peculiar fitness to the nature and circumstances of the animal, can be accident—must surely be of extraordinary character, or must have received unhappy bias in its education. As a concluding reflection with respect to vision, we may remark, that all the provisions above considered have mere utility in view—for any one of them wanting, would leave a necessary link in the chain of creation wanting: but we have shewn in a preceding part of the work, that if there had been white light only, susceptible of different degrees of intensity and shade, the merely useful purposes of vision would have been answered about as perfectly as with all the colours of the rainbow—which truth is instanced in the facts, that many persons do not distinguish colours, and that it imports not whether a person view objects in the morning, or at mid-day, or at even-tide, or through plane glass or coloured glass. While, therefore, the existence of light generally, and of the eye, speaks of Creative Power and Intelligence, the existence of colours, or of that lovely variety of hues exhibited in flowers, in the plumage of birds, in the endless aspects of the earth and heavens; in a word, in the whole resplendent clothing of nature,—because appearing expressly planned as a source of delight to animated beings, speaks of Creative Benevolence, and may well excite in us towards the Being in whom these attributes concentrate, the feelings associated in our minds during this earthly scene, with the endearing appellation of 'Father.'"

After what we have said and done respecting this volume, a word of praise would be a word of waste.

Life on Board a Man-of-War; including a full Account of the Battle of Navarino. By a British Seaman. 12mo. pp. 193. Glasgow, 1829, Blackie, Fullarton, and Co.; London, James Duncan.

WE might call the author of this book an ordinary seaman, were it usual for that class to turn literary; for he seems not to have seen much service till he got into the fleet of Admiral Codrington, and with it, into the thick of the battle of Navarino. Of the opinion he formed of that memorable engagement it is a sufficient indication to say, that his account of it is dedicated to Captain Dickenson. With some faults and exaggerations (see pages 34-5),

excusable, perhaps, from such authorship, this little volume has entertained us in many of its spirited descriptions. The following scene on board the *Genoa*, after the fight, is very forcible.

"I found some of the men engaged in burying Rooney, the only man killed who had a wife aboard. Mrs. Rooney sat on the truck of a gun, her face hid in her hands. As they proceeded to put him overboard, she started up, and told them to stop a few minutes; she then went down upon her knees, and, stroking back his curly hair, patted his cheek, exclaiming, 'Poor Jem! poor Jem!' Then clasping her hands together, she rose, but immediately dropped down senseless on the deck. Four of the men carried her to her berth, while I bent my way to my own mess. The deck was quite dark, save the glimmering light of a candle here and there, stuck in a purser's lantern suspended from the battens. When I came to my berth I was welcomed by the whole of the mess more like a brother than a shipmate: but this day made us all brothers; feuds and animosities were buried in forgetfulness; and many who had entertained bitter hatred at one another would be seen shaking the hand of friendship together. I took my seat, and commenced looking about to see if any of the old familiar faces were amissing; but it was difficult to recognise my messmates in the curious group of ferocious-looking banditti that surrounded me. They were all dressed in shirt and trousers, with handkerchiefs round their heads, and pistols and cutlasses at their belt. Their faces were black with smoke and gunpowder, and several who had been wounded with splinters had large plasters about their cheeks. To heighten the effect, gleams from the blazing Moslem vessels cast every now and then a red glare into the berth. I found, on inquiry, that two of my messmates besides Morfiet were killed. We talked of the behaviour of the ship's company, and the probable consequences of the battle. Tom Elliott came down with a monkey of wine, and said, 'D'ye see, shipmates, the purser's steward has filled the monkey up to the brim! now, come, we shan't be sogers. Hand us the tot from the inside there, and let us all drink round.' We drank to the memory of our good old captain, and all who fell on this glorious day. I found the wine revive me greatly, and soon went on deck to have a view of the scene of battle, by the light of the Turkish fleet, that was blazing in all quarters."

The following is also characteristic:—

"The Turkish vessels still continued to burn, and the discharge of their heated guns, at intervals, sounded like minute guns lamenting the devastation of the day; while the gentle breeze that began to blow at night, as it whistled through the tattered remains of our rigging, seemed to mourn for the brave men who had fallen, and who now lay 'full many a fathom deep' in the blue waters. About ten o'clock I heard a melancholy voice right under our stern, crying, 'Ali! Mahomet!' Jack Mitchell and I rose, and, looking under the stern, we saw two Turks clinging to the rudder, and sending forth their ejaculations for God and Mahomet to save them. We could offer them no assistance, for strict orders had been given not to allow any of the enemy to come aboard. The poor fellows seemed as if they could not hold on long. In about five minutes one let go, and soon after the other, both sinking in the water with the half-articulated cry of 'Ali! Ali!' Mitchell returned and stretched himself on the deck, saying, with

an affected air of indifference, that he 'would be blessed if he would be again disturbed in his snooze for all the b——y Hometans in Christendom.'"

Another affecting extract, and we have done.

"The morning before we reached the island of Sicily, Captain Moore of the marines, who had been wounded in the action of the 20th, died; his wound, which I believe was in the thigh, having mortified. He was an old man, and as much beloved by his own men as the commodore had been by us. A coffin was made, perforated with holes, and the body deposited in it along with shot and bags of wet sand, to make it sink. It was laid, covered by a union jack, on a grating, fixed against the ship's side, the outer edge of which was raised to a level by two slip-ropes held fast by two men, so that at the word being given, by letting go the slips, the grating dropped like a hinged door against the side, and the coffin would fall into the sea. The order was given to toll the bell, and the ship's company and officers, in full uniform, mustered, all hats off, on the upper deck, as near as they could to the gangway; the fore and mainchains were crowded, and all stood in respectful silence to see the coffin consigned to the deep. A file of marines was ranged on the gangway, to fire three volleys over their departed commander. The chaplain commenced the funeral service for a person buried at sea. 'Not a sound was heard,' but the breaking of the water on the weather-bow, while the solemn voice of the chaplain rose at intervals, and seemed to be borne along on the winds. When he came to the passage, 'We commit his body to the deep,' the slips were let go, and the coffin sunk into the white-topped wave that ran under the lee of the ship. The marines fired three rounds over him; and this concluded the funeral of Captain Moore, who was buried nearly opposite the cloud-capt top of Mount Etna."

From the foregoing it will be seen, that if not altogether correct as a true and particular sailor's book, this volume affords some curious touches of Life on Board a Man-of-War, and is well worth the time which its perusal demands.

Stories of Travels in Turkey. 12mo. pp. 279. London, 1830. Hurst, Chance, and Co.

THIS is one of a series of neat and acceptable publications of the same class, projected with the view to aid the progress of national education; and as the Turkish empire is now much the theme of discussion, we consider it to be as opportune in the point of time as it is creditable in the point of judicious compilation. Dr. Walsh, Captain Frankland, Mr. Macfarlane, and other recent travellers, have been laid under contribution; and altogether, the volume is very amusing and instructive.

Family Classical Library, Vol. I. The Oration of Demosthenes. Translated by T. Leland, D.D. 12mo. pp. 336. London, A. J. Valpy.

WE have here the commencement of another undertaking for the more general distribution of knowledge, and one which, if as well conducted as we may expect from Mr. Valpy's classical superintendence, bids fair to occupy an enlarged station in our immediate literature. The plan is to give good translations of the great Greek and Roman orators, historians, and poets, with biographical sketches and illustrative notes. Of this the volume before us

is a specimen well calculated to recommend what are to follow: though, perhaps, Herodotus or Xenophon (richer in remarkable facts and anecdotes than any orator can be), would have been a beginning better calculated to attract general popularity. Leland's *Demosthenes*, however, is an excellent work; and, with the existing thirst for intelligence that prevails throughout the community, will, we are persuaded, be read by multitudes who never before thought of making themselves acquainted with the noble stores of classic literature, which must tend to enlighten and improve the mind far beyond the more evanescent productions of the day. A head of Demosthenes, finely engraved, and another of Sallust, are to be given in the next volume.

ORIGINAL CORRESPONDENCE.

Paris, Dec. 17.

MESSRS. de Polignac and Montbel have been to see the new Chamber of Deputies. This temporary erection has been completed in the short space of two months and ten days, in spite of the bad season and the alterations made in the original plan from time to time. It does not resemble the old chamber, nor is it in conformity with the plan of M. Laboulaye. In the old building a large passage separated the centre right from the centre left, and each of these sections was only divided from the rest of the side to which it belonged by a very narrow passage. At present the seats are so disposed as to present five sections. The right and left sides, each divided into two sections, form rather more than the half of the semicircle. The centre is undivided, and is of greater extent than either of the other sides. There is, therefore, no longer a passage in the middle, and consequently no longer a centre right or left, but only a compact centre. The gallery goes now all round the interior, and is much more prominent than in the old chamber; but as it comprises the places reserved for the peers and the diplomatic bodies, who were formerly placed in the lower part, there will not be more room for the public. An improvement which may be noticed is the removal of the columns that obstructed the view of the public, and caused one seat out of three in the first row to be lost. The place intended for the reporters to the public press, which is where it was formerly, has thus been enlarged by a third, without occupying more space. When seen from the Palais Bourbon, the new building has but a very paltry appearance, and resembles the temporary elevation made in order to carry on the works at the Fountain of the Elephant. The interior, however, is not devoid of elegance.

ARTS AND SCIENCES.

GEOLOGICAL SOCIETY.

A COMMUNICATION from Dr. Fitton, late President of the Society, was read: it was an account of what we understood to be a geological survey of part of the low countries of France, made by the author some time ago, and was in continuation of a former paper on a similar subject. In the present paper, Dr. Fitton, after a variety of scientific detail, remarks a striking affinity between the strata and other formations of the mountains in the vicinity of St. Omer, Namur, &c. with those in the neighbourhood of Bath and Bristol. At Aix great quantities of green sand, resembling fullers' earth, was discovered, and judged every way fit for the woollen manufactures. By a series of analogous facts the author shewed the

impropriety of deriving appellations from external character. Various presents connected with literature and the science of geology were placed on the table.

AFRICAN EXPEDITION.

WE feel a great interest in stating, that Mr. Lander, the faithful and intelligent attendant of Captain Clapperton, is on the eve of setting out, under the auspices of Government, to attempt the completion of the inquiries into African geography. How nearly he had formerly succeeded, under every difficulty and privation, when left alone by the death of his unfortunate master and friend, renders it more than commonly probable that he will happily achieve this great enterprise.

CURIOUS ATMOSPHERIC PHENOMENON.

MONS. BOURDET DE LA NIEVRE, captain in the staff of Napoleon's army during the Polish campaign of 1806-7, gives an account of the following singular electrical phenomenon, which occurred to him and his party during the night of 24th Dec. 1806, the eve of the battle of Pultusk. The oldest of the Polish peasantry, says M. Bourdet, declared they never remembered a milder season; not a flake of snow had as yet fallen, nor had we experienced any of those cutting north winds which generally commence here very early in the winter. We had, however, almost daily, heavy rain storms. I was in command of a demi-battery, attached to a brigade of light cavalry forming part of our advanced guard. It was about nine at night, after a day of unclouded sunshine, that we were advancing across some open fields, when suddenly a violent north wind sprang up; in a few minutes after, it became so dark that we could hardly see our horses' heads, and the wind blew so tempestuously that the alarmed animals halted and refused to proceed. In a moment the tips of the horses' ears, and the longer hairs of their body (except those of the tail and mane), became luminous. Every pointed bit of metal about their harness, or the mountings of the guns, shone also with a phosphorescent light; it was, in short, as if a flight of fire-flies had suddenly descended and settled upon our horses and guns. My quarter-master, who was close to me, observed the ends of my mustaches luminous; his, though much thicker, were waxed, and did not offer the same appearance, but it was visible on several of our artillery men. Our eyebrows and hair were not similarly affected, perhaps because the eye-shade of our *schakos* protected the one, and the other, always kept cut short, was covered by the oil-skin neck-piece. This luminous appearance was of equal duration with the wind storm, that is, about three or four minutes. Our horses stretched their heads upwards, pricking their ears, open nostrils, and snorting, their manes and tails extended, fore-legs stiffened and thrust forward, and their hind-legs bent so as almost to bring them on their haunches. As long as the wind lasted, neither whip nor spur could urge them on, though some of them seemed to make involuntary efforts to advance. The moment the wind ceased, the luminous appearance vanished, and a deluge of rain and hail immediately succeeded; but, though the darkness continued, our horses once more bestirred themselves, bounded forward with frequent leaps, snorted loudly, neighed, and continued the march. As soon as I arrived at the advanced posts, I mentioned this singular occurrence to my comrades. Though distant only about three leagues, they had seen nothing of it, nor felt the wind, but had had a heavy

shower of rain just after the rain ceased with us. The direction of the shower was against the wind. These luminous appearances, concludes M. Bourdet, were they electrical or phosphorescent?

LITERARY AND LEARNED.

OXFORD, Dec. 19.—On Thursday the following degrees were conferred:—
Doctor in Civil Law.—W. Morgan, Esq. Fellow of Magdalen College.

Masters of Arts.—E. O. Hughes, Jesus College; Rev. H. W. G. Armstrong, St. John's College; S. R. Bosanquet, Christ Church; Rev. T. Scard, Magdalen Hall.

Bachelors of Arts.—J. E. E. Spink, Wadham College, A. F. B. St. Leger, Brasenose College, Grand Compounders; J. T. Toye, T. Richards, Queen's College; J. P. Simonet, St. Edmund Hall; G. Thompson, Magdalen Hall; W. North, W. Williams, E. Davies, W. Dyer, Jesus College; J. C. Croft, Scholar, G. G. Ponsonby, University College; J. C. Pack, Christ Church; J. Young, Corpus Christi College; G. E. B. Wood, School of Pembroke College; N. C. Strickland, W. Drake, H. H. Pearson, Lincoln College; J. J. Vaughan, Merton College; E. T. B. Twissleton, Scholar, B. Banning, J. F. Stuart, Trinity College.

THE Cambridge Prize subjects for the ensuing year are, for the Chancellor's gold medal for the encouragement of English poetry.—*Byzantium*.

The two prizes of fifteen guineas each, given by the representatives, for the encouragement of Latin prose composition, to be open to all Bachelors of Arts, without distinction of years, who are not of sufficient standing to take the degree of Master of Arts; and two other prizes of fifteen guineas each, to be open to all Undergraduates who shall have resided not less than seven terms, at the time when the exercises are to be sent in. The subjects for the present year are—1. For the Bachelors, *Quantum momenti, ad studium rei theologicæ promovere, habet literarum humaniorum cultus?* 2. For the Undergraduates, *Quæ sit forma Platonicæ ad Græciæ renascentis statum optime accommodata?*

Sir Wm. Browne having bequeathed three gold medals, value five guineas each, to such resident Undergraduates as shall compose—1. The best Greek ode in imitation of Sappho; 2. The best Latin ode in imitation of Horace; 3. The best Greek epigram after the model of the Anthologia; and 4. The best Latin epigram after the model of Martial; the subjects for the present year are—1. For the Greek ode, *Ilysiæ Laus*; 2. For the Latin ode, *Cuma*; 3. For the Greek epigram, *Ægeæci mendacio*; 4. For the Latin epigram, *Spætiæ inclausus iniquis*.

The Porson prize is the interest of £400 stock, to be annually employed in the purchase of one or more Greek books, to be given to such resident Undergraduate as shall make the best translation of a proposed passage in Shakespeare, Ben Jonson, Massinger, or Beaumont and Fletcher, into Greek verse. The subject for the present year is—*Romeo and Juliet*, Act II. Scene 2, beginning, *He jests at scars, &c.* and ending, *I'll no longer be a Capulet*.

SUPPLEMENTARY NOTE ON "THE PHARAOKS AND THEIR TIMES," ESSAY I.

No authenticated Pharaonic inscriptions belonging to reigns anterior to the eighteenth dynasty having been before the public up to the appearance of the latest accounts from M. Champollion, it has been assumed in the foregoing introductory essay that all such hitherto discovered were consequently of dates posterior to the Jewish Exode. Since, however, those observations were penned, the writer has had access to much original hieroglyphic intelligence, in manuscript and scarce lithographs, by favour of W. Jerdan, Esq. from whence it indisputably appears that the researches of the French expedition have been anticipated, as to all the leading and radical facts of monumental history, by the zeal and sagacity of a few learned individuals of our own country; and that Champollion's monumental successions of the Pharaohs, and his chronological order of their edifices, are, in very many respects, erroneous. It is, in fact, impossible rightly to estimate and comprehend his details without reference to the discoveries of Messrs. Wilkinson and Burton and Major Felix, terminating in the year 1828, ample use of which will be made in our succeeding papers; by which it will appear (without, however, attempting to depreciate the inestimable researches of our continental friends) that Englishmen, though their labours have been less known, have, from

the first, taken the lead in this most interesting department of antiquarian inquiry.

The discoveries alluded to, include a complete and verified restoration of the successions of Pharaohs, to which the Tablet of Abydos (brought to light by Mr. Banks in 1817, and, next to the Rosetta inscription, beyond all question the most important key to hieroglyphic history), which has been heretofore very imperfectly understood, is an index. Amongst other important results, it is by this restoration made evident that the beautiful rock temples of Benihasan, from which M. Champollion has copied such great numbers of paintings and inscriptions relating to the natural history, arts, and manners of the Egyptians, instead of being the work of the Pharaohs of the twenty-third dynasty, in the eighth and ninth centuries before Christ, when Egyptian art was on the decline (vide letters five and six, *Lit. Gas.* of Feb. 21st,) really bear date several reigns before that of the Diospolite family, the eighteenth, originated. The consequence is, that if any of the monuments hitherto discovered may be expected to throw light on the ages of Joseph and Moses, it will probably be found in translating the numerous inscriptions of Benihasan and other monuments of the Osortesen family.

The times of the earliest builders of Karnac and other edifices are also rectified by the invaluable Pharaonic catalogue, collected by the before-mentioned gentlemen, and compiled by Major Felix in 1827. Among its many important results, it may be mentioned that the most ancient king, Mandouei I. or Osymandias of Champollion, is proved to be a nonentity, or rather, that the second Osirei of the eighteenth dynasty has been mistaken for the hero of Hecateus and Diodorus; that the genealogy from Amosis to Ramesses the Great, alluded to in note 5 (see Champollion's fourteenth letter), is proved to have been discovered by Mr. Wilkinson and Mr. Burton so long ago as 1825; that the restoration of kings Memphis or Phthamenoph and Ramerri or Amerri to the eighteenth family (vide Champol. let. 13 and 14), together with that of the Lusian dynasty, from an inscription found on the road to Casseri (vide letter 7), are also anticipated in the catalogue in question; so are the names of the Pharaohs whose remains repose in the Necropolis of Thebes.

But to enumerate all the advantages of this British catalogue of the Pharaohs, and the mistakes which it rectifies, would far exceed our compass: suffice it to say that, in the present papers, it will be adjusted to the only series of Egyptian dates and eras to be found in original authors literally followed, and that the Pharaonic canon of time thus obtained will embrace every advantage to be derived from scriptural, historical, monumental, and astronomical verification.

It may be observed, in conclusion, that, had the members of the French expedition, as at first intended, limited their researches to monuments and inscriptions previously unelucidated, their harvest must have been barren indeed. Their copious details will, however, throw invaluable light on the discoveries of our countrymen.

C.

NORTHERN LIBRARIES.

To the Editor, &c.

SIR,—I am so sensible of your great zeal in the promotion of literature, that I naturally seek your aid to give extensive circulation to the following appeal;—for through what channel can the present subject be so appropriately conveyed, as by the honourable medium of the *Literary Gazette*?

I have recently received an interesting letter from Professor Rafn, secretary of the Royal Society of Northern Antiquaries at Copenhagen, and an honorary member of the Society of Antiquaries of London, describing the successful foundation of two public libraries in Iceland, of a third in one of the Feroe Islands, and of his intention to establish a fourth in Greenland, to which it is proposed to add a museum of natural history, which cannot fail to be of importance in the diffusion of knowledge. It would be difficult to express, in suitable language, the high degree of commendation which is due to this learned gentleman for his patriotic and useful endeavours. But even praise, though delightful to a generous disposition, is not sufficient of itself to support the most energetic mind in the continuance of arduous exertions, or to cheer it to a satisfactory completion of grand designs. An individual can hardly be expected to devote his time to perpetual solicitations for pecuniary resources, or to bestow unremitting attention upon the requisite advancement of such multifarious concerns. I therefore most respectfully venture to request the benevolence of all the lovers of learning, in assisting Professor Rafn to carry his laudable efforts into full effect. And, as I thus publicly invite the co-operation of the liberal and the studious, I trust that I shall stand excused of any presumption, or improper motives, in humbly offering myself to be the receiver of such sums of money as the friends of these literary institutions may think proper to contribute.* At the same time, I would candidly submit to the consideration of your numerous readers, how desirable it will be, that all presents should be transmitted free of expense.

I need scarcely call to your recollection, Mr. Editor, the celebrity which the Icelanders acquired, many ages ago, by the splendour of their poetry, and their knowledge in history,—so that now to supply them with such treasures of science as have been accumulated by successive centuries of improvement in other parts of Europe, seems only to be an honest acknowledgment of a debt of gratitude, which every well-wisher to literature will rejoice in this opportunity to discharge. Of the kind of books, or of the languages in which they are written, no precise description can be recommended: those must depend upon the inclinations or the pursuits of the several donors, and of their own conceptions of what literary stores are best suited to such remote regions, and the embryo state of a miscellaneous collection. None, however, can err in being bountiful,—for all classes of books must be acceptable to those whose shelves are at present empty.

I am willing to hope, that in appealing to the generosity of my countrymen in favour of literature, I shall not be disappointed. In those dreary regions much poverty naturally prevails; and little, therefore, can be contributed by their humble inhabitants; and although powerful assistance has cheerfully been bestowed by the friends of these establishments, both in Denmark and other states of the north, yet considerable support is still required.

Whatever may be the amount of the donations, whether in money or in books, receipts are to be faithfully procured, on the distribution of the same, from the prefects of the respective establishments; and, I may with con-

fidence add, accompanied with a feeling of gratitude and respect commensurate to the kindness and benefit which will have been conferred upon these deserving, but comparatively desolate, people.

In the expectation that I may have the pleasure hereafter of recording, in your pages, a splendid monument of the patronage of the public, I have the honour to be, &c.,

Somerset Place, Strand, NICHOLAS CARLISLE.
Dec. 21, 1829.

FINE ARTS.

NEW PUBLICATIONS.

Miss Fanny Kemble. From a Drawing by Sir T. Lawrence; on stone by R. J. Lane, A.R.A. Printed by Hullmandel. Published by J. Dickenson.

THIS is a very sweet likeness of this charming creature, whose dramatic genius has given such delight to tens of thousands. It is gratifying to see the elegant pencil of the President employed upon so deserving a subject.

The Device. The Gentle Reproach. Bonington (Bonington—even the orthography of the name of a man of genius is important,) pinxit. On stone by W. Fairland. M'Cormick.

BOTH these subjects, engraved on a small scale, have already come under our notice, and have elicited our admiration. They are very ably transferred to stone by Mr. Fairland.

Engravings of Ancient Cathedrals, Hôtels de Ville, and other Public Buildings of celebrity in France, Holland, Germany, and Italy. Drawn on the spot, and engraved by John Coney. With Illustrative Descriptions by Charles Heathcote Tatham, Esq. and able Assistants. Part III. Moon, Boys, and Graves.

OUTLINE, colouring, and effect, are the three means by which art attains its end. Although that end is undoubtedly best attained when those means are conjointly employed, yet it is surprising how much may be accomplished by any one of them when in skillful hands. Of this the present publication affords a striking proof. With some slight and unimportant exceptions in the accompaniments, curiously elaborate outline is the quality of art on which it exclusively depends; and so exquisitely is that outline managed by Mr. Coney, that for the moment we can scarcely believe that it would be improved by any adjuncts; nay, we almost think that its perspicuity and richness would be injured by them. This is really a great triumph of talent. The prints in the third Part (which, by the by, is the first that we have happened to see) are, "Cathedral, Rouen, West Front;" "Cloth Hall, Bruges;" "Hôtel de Ville, Louvain;" and "Cathedral, Amiens." The descriptions are in English, French, Italian, and German.

A Brown Study. Drawn and engraved by F. J. Havell. J. Kendrick.

A LITTLE of the blue devil seems to be mixed with this brown study. By which of an artist's manifold miseries it has been occasioned,—whether his oil will not dry, whether his varnish has cracked, whether his sitter has kept him waiting six hours in vain, or whether (as the climax of vexation) his best picture has been hung in the Antique Academy, over the door of the Library,—we know not; but we never saw a position of more deep and determined, and apparently painful, cogitation. Mr. Havell has managed his chiaroscuro with great success.

ORIGINAL POETRY.

A CHRISTMAS CAROL: EXTEMPORE.

By a supernumerary Bohemian.

BARDS may rave and sing
Of the summer's glory,
Or the pride of spring—
Give me winter hoary!

Christmas, clear thine eye,
Sport thy crimson berry,
As in years gone by,
When all hearts were merry.

Smiles of sunshine don,
Like a bluff old fellow;
Put a blue sky on,
Throw aside the yellow.

If thou friendly art,
Here's a hand to greet thee—
Choose the blusterer's part,
Weapons I've to meet thee.

Noted boxer, yet
Give me gloves I'll fight thee;
All thy heavy wet
Shall not damp nor fright me.

I defy thy blast,
By the fire-side anchor'd;
'Gainst thee, to the last,
I'll serve at my tankard.

Spread thy choking fogs,
Blind and lame the cattle,
With these blazing logs
I will give thee battle.

Neither heel nor toe
Dreads thy chilly canker;
I have checks on Snow—
Not, alas! the banker.

Well done, heart of steel!
My advice thou'rt taking;
We are friends, I feel,
For my hand thou'rt shaking.

How the chimneys flare!
Roasting, boiling, stewing;
Here—there—every where—
Kitchens are doing!

Chabert, king of fire!
Thy hot realm forsaking,
Cooler air respire—
All the town is baking.

Well, I wish thee wealth,
Poison-quaffer placid:
Monsieur, here's your health—
Not in prussic acid!

Welcome, Christmas gay!
Welcome, comrades jolly!
Hip, hip, hip, hurra!
There's no crown like holly!

There's no drink like ale,
Toasted, spiced, and foaming,
For fat, lean, red, pale,
From the dawn till gloaming!

Wine, by Britons bold,
Should be taken sparingly;
All great deeds of old
Sprung from "blood of barley!"

I detest champagne,
Sham port never trade in,
Therefore I refrain
From all colognading.

Howe'er rich and ripe,
By a change of vowels
Grape becometh gripe—
Awful to the bowels!

* See the Advertisement in our Supplement; and with it receive our most hearty recommendation of the object in view, so ably exposed, and in a way so honourable to his feelings as a cosmopolite in literature, by our correspondent Mr. Carlisle.

Push the jug about !
 Ere we put a stop to
 This our Christmas rout,
 Toes shall have the hop too.
 And, forsooth, I feel,
 Now my head the malt's in,
 I can do a reel
 Better far than waltzing.
 Vanish'd all the beer !
 Empty is the barrel ?
 Deuce it is !—then here
 Ends my Christmas Carol !

SKETCHES OF SOCIETY.

ANECDOTES OF THE SIAMESE YOUTHS.

THOUGH we have said little of these extraordinary boys since our first notice, (and, indeed the journals generally have been very silent about them,) we have not been inattentive observers of a phenomenon so unexampled in the annals of the human species. We have endeavoured from facts to form some more accurate notion of their separate existence, and of those ties of sympathy or long habit which, together with their natural band, unite them so inseparably to each other. And as several of these matters will, we trust, interest our readers, we shall throw them, without method, into the anecdotal form.

The acquisitions of these lads seem to proceed nearly *pari passu*;—they have both learned a good deal of English, and speak it very nearly alike. They have also, of late, been taught whist, at which they play tolerably well, and of which they are very fond. And one of the remarkable traits attending this is, that they play the game *against* each other, and most honourably (we have seen single-bodied players not quite so correct) abstain from looking into each other's hands. The other day Chang played *dumbly* against Eng and a partner; and a very interesting contest it was.

Recently, when they were indisposed, they took medicine together, and were affected precisely in the same manner; but when medicine was administered to the one and not to the other, no effect was produced on the exempt.

A curious exemplification of their separate state is afforded by the grand mystery of dreaming. Not long since, the individual who sleeps in the room with them observed one extremely disturbed in his sleep, and the other so violently agitated that he screamed out. He hastened to awake them, and on inquiring what was the matter, the one that was disturbed told him he had dreamed he met his mother; the other, who was more agitated, that he thought somebody was cutting off his hair. The hair, by the way, is a cherished ornament. In sleeping they lie on their back, with their heads, generally, as far apart as possible or convenient.

While asleep, if you touch one, you also awake the other. But it appears that though a sensation is communicated, it is not the same sensation. For example, if one is tickled to cause laughter, the other knows you are tickling his brother, but he does not feel it. This is the case whether he sees what is done or not.

They are smart in their remarks, and very excellent mimics and imitators. The other day Sir A. Carlisle was enforcing the expediency of their being taught to read; and, by way of demonstrating the thing, he marked a big A on a card to shew them. This he did, pronouncing in a sound pedagogue style *A a a*. The boys immediately sounded the letter so

like their instructor as to create considerable merriment. He then went to B and C; but while doing so, they had got a little impatient, (as schoolboys will do with their teachers,) and one of them interrupted him: upon which he exclaimed, "Pshaw, pshaw, *g'ed* to me." So the lesson continued, till C *g'ed* took the pencil to make the letters, and *g'ed* it in his hand in the most awkward way; upon which Sir Anthony interfered to set him right; but the scholar was close in all, and in his turn exclaimed the very same "Pshaw, pshaw, *atten* me!" He nevertheless drew the A capitally in his own mode.

On another occasion a visiter, impressed with the idea that their religious instruction ought to be attended to, spoke to them on this subject. In his investigation of their condition, he asked, "Do you know where you would go if you were to die?" To which they replied quickly, pointing up with their fingers, "Yes, yes, up dere." Their saintly friend, unluckily for himself, persevered in catechising; and questioned them, "Do you know where I should go, if I were to die?" to which they as promptly answered, pointing downwards, "Yes, yes, down dere." We are afraid that the laugh which followed was likely to efface the memory of the well-meant attempt to imbue their minds with Christian knowledge.

With regard to their speaking to each other, though they do not do so often, yet they occasionally converse. It has, also, a singular effect to witness the two speaking together at the same time on different topics to different persons. This they will do if two beautiful females happen to address them together; for they have taste enough to be very partial to beauty in the other sex. They are much attached to the wife of Mr. — one of the individuals who brought them to Europe.

They almost always eat alone, and, we understand, have a dislike to being looked at while they take their meals.

Of their strange formation, an accurate cast has been taken by Mr. Sievier, and admirably copied in wax by a pupil of Mr. B. Bolton, the medical gentleman who has attended them since their arrival.

The infrequency of junctions of this nature renders every particular that relates to such beings curious; and we wish we could learn even more trifling anecdotes than we have here related, of similar phenomena in former times. But we know little or nothing of them, except that they were somehow joined. There was, according to tradition, a union of this kind in Scotland, in the age of the third James, and they (males) lived to be men. We have also seen an etching of two remarkable Hungarian girls who lived to maturity. They were united by the hips, and died within a few seconds of each other. We have said nothing of abortive specimens, &c. of which every surgical museum furnishes painful examples; though there are so few recorded and authenticated cases of such an interesting kind as that which is now daily witnessed in London.

Apropos, we have just received an effusion on the Siamese youths from a poetical correspondent; and though we have not room for it all, we shall insert a few of the lines.

If in the page of Holy Writ we find
 That man should not divide what God hath joined,
 O why, with nicest skill, should science dare
 To separate this Heaven-united pair?
 United by a more than legal band,
 A wonder wrought by the Creator's hand!
 Poor guileless boys! let not the eye of pride
 That views its perfect self, your form deride!
 Nor call those "monstrous," who a model prove
 Of hearts conjoined in harmony and love!

And ye were happy in your native soil;
 The morning ray awoke you to one toil,
 One bark was yours—at once ye climbed one mast;
 One simple couch was yours and one repeat.
 And doubtless He who joined you at your birth
 Would grant one death—one grave in mother earth.

DRAMA.

DRURY LANE.

No original writers! Why, the Theatres-Royal have scarcely been open three months, and no less than five original pieces have been produced between them. The *Royal Love-Match*, and the *Early Days of Shakespeare*, at Covent Garden;—the *Greek Family*, the *Follies of Fashion*, and the *Witch-Finder*, at Drury Lane!—'Tis true that two of them have been damned, and that the rest have disappeared; but their originality at least was never questioned; and the patriotic play-goers, (that numerous class, according to some of our contemporaries), who infinitely prefer a piece, however poor, of home manufacture, to a good foreign article, judiciously prepared for the English market, have certainly had no right to complain this season. On the contrary, it is the turn of the managers to grumble, and exclaim with Horace, "*Quid dem? quid non dem? renuis tu quod jubet alter*." Far be it from us to discourage original genius; but, seriously, we are sick of the common-place lamentations, daily doled out, respecting the decay of the Drama, by persons so wofully ignorant of the subjects on which they write, that they cannot distinguish the cause from the effect. Passing over the unfair and ridiculous abuse showered upon some of our most popular modern dramatists, because, forsooth, like their fathers before them,—ay, from Shakespeare to Sheridan,—they have sought for their plots on the foreign stage, or in the popular novel;—for let us, pray, inquire the difference between the adaptation of a novel of Boccaccio and a novel of Walter Scott, the translation of a vaudeville of Scribe and a play of Kotzebue;—as our readers will remember, is not the style of execution, but the act itself which is so unsparingly reprobated, and which must be theft in one case as well as the other;—but passing, as we proposed, this question, why, we will ask, have the few writers of original comedies, &c. yet left us, gradually fallen into the same sinful ways of translation and adaptation? It can hardly be, one would suppose, from the want of encouragement in these degenerate days, when they are wooed in the most honeyed accents of the press to revive the glory of the English stage. Why do not the high names of Scott, Moore, and Southey, figure in the list of modern English dramatists? Why are not the lighter, but, perhaps, still more dramatic pens of Lytton Bulwer, Cooper, Horace Smith, &c. employed in the revival of the British Drama? From want of encouragement? Alack! even so. The author of the *Witch-Finder* shall speak in his own words upon this subject. The following extract is from the preface to his historical play of *Thomas à Becket*, lately produced at the Surrey:—"It must, unfortunately, be allowed, that the present period is not the most auspicious to the production of original dramas. When every other species of literature, save that of the theatre, is protected by legislative enactments from unprincipled piracy, it is not to be expected that many writers will be found to expose their plays, as Alfred hung up his golden bracelets, in sheer contempt of robbers. In England, the bannings of the dramatist are a proscribed race; they come under a kind of outlawry,—'whosoever findeth them may slay them.' Whilst

such is the case, it will be in vain to hope for a rapid improvement in the modern Drama." Mr. Jerrold's remarks have more common sense in them than we should have expected from any writer who could be guilty of suchrodomontade as abounds in both of his above-named dramas;—the plots of which are as defective as those of the most obscure of the old dramatists, whose phraseology he labours to imitate, apparently without perceiving that his very best ideas are disguised, past hope of discovery, by the antiquated garb in which they are affectingly uttered. We have made him speak for others from the preface of his play, he shall now counsel himself from the dialogue of it. "Too many apothegms in a tale, like too much gold on an arrow, adorn only to impede," says his own Sir Walter Breakspear to Swart; the latter of whom might have been made a character, did not Mr. Jerrold put the same style of language into the mouth of every person, gentle or simple, in utter defiance of the old rule, "*Intererit multum Davusne loquatur an heros.*" But we find we are criticising *Thomas à Becket* instead of the *Witch-Finder*. It is, however, not of much consequence, for each is replete with the same faults, and on the same boards would have met with the same fate. Harley imparted some life to the serving-man, *Jet*, (a faint copy of Peake's *Willibald*, in the *Bottle Imp*, so exquisitely embodied by Keeley); and Farren produced a momentary interest in one scene of the second act. Mrs. Orger and Cooper did all that could be done; but the unrelieved dullness and obscurity of the plot, and the affectation of the language, (some parts of which, however, let us in fairness acknowledge, were not without merit,) were soon perceived to be fatal. The *Witch-Finder* was most unequivocally condemned.

VARIETIES.

Orange.—A curious paper was lately read to the French Academy by M. Charles His, in which the varieties of the orange-tree and of its fruit were minutely examined and described. All the ordinary kinds of the orange M. His holds to be monstrous productions: the result of a sort of struggle between the laws of vegetation and the force of affinity; and he points out one species, differing in many important respects from the common fruit, which he considers to be its natural state.

The Talmud.—The Abbe Louis Chiarini, professor of the oriental languages and antiquities in the University of Warsaw, has been engaged for these eight years on a French translation of the Babylonian Talmud, which, with the necessary supplements from the Jerusalem Talmud, and other monuments of Jewish antiquity, is to give a complete view of the Talmudic doctrines. M. Chiarini is of opinion, that there are no better means to effect the long talked-of improvement of the morals, the principles, and the situation of the Jews, than the complete communication of the Talmud, and all the other monuments necessary to illustrate it, in a European language which is universally understood. This, he thinks, would lead the Jews to be ashamed, in the eyes of the world, of the laughable and absurd, as well as hurtful and wicked, principles of the Talmud, to abandon the corrupt Talmudic doctrine, and to revert to the pure Mosaic system, which would produce desirable consequences.

Sciences.—Dr. Siebold, envoy of the King of the Netherlands in Japan, has transmitted to the Asiatic Society at Paris a work, containing the result of his four years' residence in that country, and which is to be printed at the

expense of the society. He has also collected a Japanese library of 1500 volumes, a zoological museum of 3000 specimens, and a botanical one of 2000 species. His companion, Dr. Burges, has formed a collection of minerals.

Fossil Discovery.—A specimen of fossil has lately been found at Lyme in Dorsetshire, which is quite unique, and bears no resemblance to any known genus. Its mammellated jaw distinguishes it from any fossil animal hitherto discovered; the claws resemble those of the crustacea; the long column of vertebrae that of the encrinurus; the orbits of the eyes are remarkably large and well defined.

Hydrophobia.—A correspondent recommends as a remedy for the bite of a rabid animal, to look to mechanical rather than to physical means of cure, which he thinks may be found in the immediate extraction of the venom by suction—a method anciently had recourse to in cases of wounds made by poisoned weapons, as well as in those caused by the bullet or the sword. To obviate the dread inspired by this horrible disorder, and the danger of there being a wound in the lips or the mouth, an artificial mouth, constructed so as effectually to perform the functions of the natural organ, is suggested. The use of the croton tiglium oil has been suggested in cases of hydrophobia, from its peculiar effect on the throat.

Sculpture.—The Museum of Avignon has just been enriched with a valuable piece of Gothic sculpture. In the church of the Benedictines, to the right of the great altar of Saint Martial, there was formerly a magnificent mausoleum in white marble and alabaster; and upon this monument, which was of large dimensions, were several bas-reliefs representing the mysteries of Christ and the Virgin. There were also several statues in bold relief, and among them was one celebrated by artists under the name of *Transi*. It is this which has been dug up; and it is, perhaps, one of the *chef-d'œuvres* of art of the middle ages. This statue, which may be called a skeleton, is represented lying on the right side. The feet, as well as a part of the left arm, are wanting, and the nose has been mutilated; but the attitude, the anatomical details, and the trunk, are in admirable perfection. This monument was erected in honour of Cardinal de la Grange. It is not known by whom it was executed; but according to tradition, and the examination to which the remains have been submitted, it would seem to be the work of an artist of great merit. At the commencement of the revolution, a part of this monument was preserved, by the precaution which was taken of burying it in the earth under the pavement of the church. On the stone above the statue is an inscription in Gothic characters, which leads to the supposition that this work of art dates from the 14th century.

Agriculture.—At the sitting of the Academy of Sciences in Paris, on Monday last, M. Dupin, in reference to a work on the comparative agricultural resources of Great Britain and France, stated that he had made several calculations respecting the crops of corn in France during the last twenty-four years; from which he found that there had been fourteen years of abundance, and ten of scarcity; and that the medium price of grain during the whole period had been in favour of the cultivator: a result which he attributes to the prohibition of the entry of foreign corn, and the exportation of French corn, except under certain restrictions. At this sitting there was no other communication of the slightest interest.

LITERARY NOVELTIES.

Mr. Sweet, the well-known practical botanist, has in a forward state for publication a new edition of his *Horae Britannicæ*, which will enumerate many thousand additional plants, together with the colours of the flowers.

A new address has been called for of Mr. Canning's inimitable Speeches: it is nearly ready for announcement.

Mr. Henry Dance, whose work on Imprisonment for Debt we lately had occasion to notice favourably, has forthcoming Remarks on Law Expenses; with some Suggestions for reducing them.

Among the new year changes, the magazine hitherto so ably conducted by Mr. S. C. Hall, and called the *Spirit and Manners of the Age*, is, we see, to take a new name (the *British Magazine*) and an enlarged form, though still under the superintendence which has done so much for it under its ancient title, and for the Amulet.

Mr. Buck's epic drama of *Julio Romano*, or the Display of the Passions, accompanied by a Historic Memoir, giving an account of the proceedings in Parliament last Session on the claims of dramatic writers—remains on the present state of the stage—and the author's correspondence with various persons: to which will be added, an Appendix stating the manner in which dramatic authors are rewarded in Russia, Germany, and France,—is about to appear.

In the *Pictorial Musical Illustrations of the Waverley Novels*, by Edward Flower. A volume of Literary Recollections and Biographical Sketches, by the Rev. Richard Warner. The Portfolio of the Martyr Student.—A Treatise on Hydrostatics and Hydrodynamics, by the Rev. H. Munley, B.A. The Lost Hair, a Novel.—Cronica, a Poem, by William Ball.—Charity Bazaar, a Poem.—The Fourth Part of *Richards' India*.—A Journal of Occurrences and Events during a residence of nearly Forty Years in the East Indies, by Colonel James Welsh, of the Madras Army.—Fits of Fits-Ford, a Novel, founded on a popular and interesting legend of Devonshire, by Mrs. Bray.—The Sixth and concluding Part of Captain Grindley's *Views of India*.—The Monopolies of the East India Company, by the author of *Free Trade and Colonisation of India*.

LIST OF NEW BOOKS.

Loudon's Magazine of Natural History, Vol. II. 8vo. 18s. 6ds.—*Essays on Political Economy*, 8vo. 14s. 6ds.—*Morison's Outlines of Mental Diseases*, 3d edition, 8vo. 12s. 6ds.—*Tatam and Young's Egyptian Grammar and Dictionary*, 8vo. 18s. 6ds.—*Tales of the Classics*, 3 vols. post 8vo. 12. 4s. 6ds.—*Mayo's Lessons on Objects*, 12mo. 3s. 6ds.—*Jones's Lectures on the Apocalypse*, 8vo. 15s. 6ds.—*Bertha's Visit*, 3 vols. 12mo. 10s. 6ds.—*Dell's Evening Amusements*, 12mo. 6s. 6ds.—*Dillon's Discovery of the Fate of La Pérouse*, 2 vols. 8vo. 12. 4s. 6ds.—*Wheat's Memoirs of De Roe*, a vols. post 8vo. 12. 6s. 6ds.—*The Rival*, by the author of the *Collegians*, 3 vols. post 8vo. 12. 11s. 6ds.—*Biber's Lectures on Education*, 8vo. 7s. 6ds.—*Economy of the Hands and Feet*, 12mo. 3s. 6ds. 6ds.

METEOROLOGICAL JOURNAL, 1839.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. November 1839.

Thermometer—Highest.....	53° 75
Lowest.....	30
Mean.....	37.225
Barometer—Highest.....	30.16
Lowest.....	29.25
Mean.....	29.716

Number of days of rain and snow, 10.
Quantity of rain and melted snow in inches and decimals, 1.56.

Winds.—1 East—5 West—4 North—3 South—1 North-east—0 South-east—3 South-west—11 North-west.

General Observations.—The mean temperature of the month below any one in the same month during the last seven years, although the maximum was above that of 1836, and the extreme of cold not equal to that of last year: the quantity of rain less than for many years, with the exception of what fell in last November: so small a range in the barometer has not occurred during the last twelve years—the mean above the general average of the month, but not so high as in 1827: about six inches of snow fell on the 24th, but was all melted in two days. Lunar halones, with misty auras, seen on the nights of the 8th and 9th. The evaporation 0.475 of an inch.

TO CORRESPONDENTS.

* With our next No. will commence a series of humorous weekly papers by the Author of *Wine and Walnuts*.

As our last No. of the year is a sort of winding-up concern, our readers will find Reviews of Books and other subjects completed in this sheet,—a little, perhaps, at the expense of novelty.

We are unable to answer S's question, without giving more time to the inquiry than we can spare.

We have not been induced to answer W. D.'s lines from the progress of Time.

ERRATA.—In our paper on the *Phaenops* in No. 683, page 839, col. 3, line 37, for "monolith," read "chelonoides";—in note 3, for "Abispharothos," read "Alispharothos";—in note 8, for "of the Celtic," read "after Celtic,"—and here and the quotation.

BRITISH INSTITUTION,

FALL MAIL.

NOTICE TO EXHIBITORS.

All Pictures and Works of Art intended for Exhibition and Sale, must be sent to the Gallery on Monday, the 11th, or Tuesday, the 12th of January, 1830, between the hours of Ten in the morning and Five in the Evening, after which time no Picture or Work of Art will be received. Portraits and Drawings in Water Colours are inadmissible.

WILLIAM BARNARD, Keeper.

Northern Libraries.

WE are authorised to state, that Messrs. John and Arthur Arch, No. 61, Cornhill, London, will kindly receive and forward to Copenhagen whatever Books may be sent to them for the Northern Libraries recommended by Mr. Carlisle, in his Letter inserted in page 845 of this No. of the *Literary Gazette*.

Professor Rafn implicitly suggests that sums of money would be the most efficient,—as it is wished to raise a small Fund for each Library, in order to secure their permanence,—to defray the Purchase occasional Works as may be particularly wanted, to bind others, and to keep the Rooms warm and in repair.

For this purpose Professor Rafn supposes that the following Sums will be sufficient, viz.

For the Two Libraries in Iceland.....£120
For the Library in the Feroe Islands..... 50
For the Library in Greenland..... 50

£220

The most respectful thanks are offered for Donations which have already been received, viz.

Money.
Hudson Gurney, Esq. M.P.....£5 0
The Rev. Joseph Bowditch..... 2 0

R. Phillips, Esq.
Messrs. John and Arthur Arch.

THE ROYAL GAME OF YORK and LANCASTER.

By F. W. N. BAYLEY.

Plantagenet.—"Let him that is a true-born gentleman, And stands upon the honour of his birth, From off this briar pluck a white rose with me."
Somerset.—"Let him that is no coward nor no flatterer, But dare maintain the party of the truth, Pluck a red rose from off this thorn with me."

This is a novel invention, on an entirely new principle, founded on an historical fact, and intended as a medium between the games of "Draughts" and "Chess."

Published by E. C. Edlin, at his Repository, No. 37, New Bond Street.

Joshua Commanding the Sun to Stand Still.—Dedicated, by permission, to His Majesty.

On the 1st of January, 1830, will be published by R. Ackermann and Co. Strand,

A BEAUTIFUL ENGRAVING, by T. WOOLNOUTH, from the celebrated Picture by CARLO MARATTI.

Price, Proofs, on India paper, 10s. 6d.; Prints, 7s. 6d.

Also may be had, the following Engravings by T. Woolnouth.

The Ecce Homo, after Guido—Madonna, after Carlo Dolci—and Gevartius, after Vandijk; being the 3d of a Series of Heads from the Old Masters. Price, on India paper, 7s. 6d. each; Prints, 6s.

In Atlas 4to. price 12s. 10s. Proofs, 16s.

PART II. of a SERIES of SUBJECTS from the WORKS of the late R. P. BONINGTON. Drawn on Stone by J. D. HARDING.

London: Printed for James Carpenter and Son, Old Bond Street.

Where may be had,

Burnet's Practical Hints on Painting. 3d edition, 4to. Illustrated by nearly 100 Enchings from the great Masters of the Italian, Flemish, and English Schools. 3s. 6s.

BOOKS PUBLISHED THIS DAY.

Christmas Present.

With Engravings, and a Map, 6s. 6d. lettered, STORIES OF TRAVELS IN TURKEY, with an Account of the Manners and Customs of the Inhabitants of Constantinople, and a Description of that interesting City, founded upon the Narratives of Macfarlane, Madden, Walsh, Frankland, Anderson, and other recent Travellers. With a Geographical and Historical Sketch of the Empire. London: Published by Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Of whom may be had,

Stories of Travels in South America. With Plates.

"The plan of this little work is excellent."—*Literary Gazette*. "Although the oldest may peruse these Stories with profit and pleasure, yet they are in a particular manner suited to the young; and to them we would strongly recommend them."—*Morning Journal*.

Price Six Shillings.

THE FOREIGN REVIEW,

No. IX.

The First Four Volumes of this very interesting and popular Journal may be had complete, price 5s. 8s. extra boards.

London: Black, Young, and Young, No. 3, Tavistock Street; Bousange and Co.; and Whitaker and Co.

"The present Number of the Foreign Review contains several very elaborate and interesting articles. Amongst these we may notice the Biography of the late Friedrich Richter, Animal Magnetism, Dumont's Bentham, Mendel's Video, &c. We must refer the readers to the work itself, as one which no general scholar should be without."—*Sheffield Iris*.

In 12mo. Illustrated by Ten Engravings, 6s. boards, STUDIES IN NATURAL HISTORY; exhibiting a Popular View of the most striking and interesting Objects of the Material World.

By WILLIAM RHIND.

Member of the Royal Medical and Royal Physical Societies of Edinburgh.

Contents.—General Introductory View of the System of Nature. The Advantages of the Study. Reproductive Powers of Nature. Geology.—Formation of the Earth.—Advantages of the irregular Surface of the Globe. The Atmosphere.—Winds.—Rain and Storms.—Metamorphosis.—Evaporation.—Rain—and the Formation of Rivers. An Autumn Day. Vegetables—their Structure, Cultivation, and Diseases. Birds—their Migration—Song—Birds. The Causes of their Existence.—Fishes.—Insects.—General View of their Habits and Instincts. Economy of Bees and of Ants. Winter—the Celestial System—Moral Effects of a Change of Seasons. Man as compared to the inferior Animals. The City and the Country.—Conclusion.

Printed for Oliver and Boyd, Edinburgh; and Simpkin and Marshall, London.

In 4 vols. 12mo. with numerous Engravings, 11. 8s. boards, 7th edition,

ANIMAL BIOGRAPHY; or, Popular Zoology; illustrated by Authentic Anecdotes of the Economy, Habits of Life, Instincts, and Sagacity of the Animal Creation.

By the Rev. W. BINGLEY, A.M. F.R.S.

Printed for C. J. G., and P. Rivington; Longman, Rees, Orme, Brown, and Green; T. Cadell; Hatchard and Son; R. Scholey; Baldwin and Cradock; J. Bookers; Hurst, Chance, and Co.; Hamilton, Adams, and Co.; Whitaker, Treacher, and Co.; J. Duncan; Simpkin and Marshall; Sherwood, Gilbert, and Piper; Houlston and Son, London; and O. and J. Robinson, Liverpool.

ILLUSTRATIONS of NATURAL HISTORY.

TORY: embracing a Series of finely executed Engravings, with descriptive Accounts of the most interesting and popular Genera and Species of the Animal World. The Number for January will contain Engravings of the Male and Female Elephants, with her young one sucking—the Lion, Lioneess, and Bitch, from Cross's Menagerie—and the Gnu and Kokoon; with Sixteen pages of appropriate Letter-press, price 1s.

Conducted by J. LE KESTUE, by whom, and R. SANDS, the Engravings are executed.

The fact of this Work having gone through a second edition previous to the first volume being completed, is a sufficient evidence of public approbation.

Published for the Proprietors by Longman and Co. Paternoster Row; Jennings, Chesapeake; Tilt, Fleet Street; Rodwell, Bond Street; and may be had of all Booksellers in Great Britain.

"The exhaustless varieties of Nature,

"For ever seen, and yet for ever new," are likely, from the specimens of this work which we have received, to be brought, at a cheap rate, more completely home to the reader than they have ever yet been. The engravings are remarkably spirited, and true to life: these alone would give the work value; but the accompanying descriptions and anecdotes of animals are particularly entered up to notice—as, while conveying to the mind important information, they are as amusing as an Arabian tale."—*Sunday Times*.

For further testimonies of this Work see *Literary Gazette*, Examiner, &c. for June, and *Sunday Times*, &c. &c. for September, 1829.

In 1 vol. 8vo. with a new and correct Set of Maps, price 18s. 8th edition of

A GEOGRAPHICAL, HISTORICAL, and COMMERCIAL GRAMMAR, exhibiting the Present State of the World, and containing the Figures, Motions, and Distances of the Planets—a general View of the Earth, considered as a Planet—the grand Divisions of the Globe into Land and Water—the Situation and Extent of Empires, Kingdoms, &c.—their Climate, Air, Soil, Vegetable Productions—the Zoology of each Country—the History and Origin of Nations—the Genius, Manners, &c. of the People—their Languages, Learning, &c.—the Chief Cities, Structures, &c. To which are added, a Geographical Index, with the Names of Places alphabetically arranged—a Table of Coins—a Chronological Table of Remarkable Events—an Obituary of Eminent Persons of every Age and Nation.

18mo. 8s. half-bound, a 2nd edition of

STORIES from the HISTORY of ENGLAND.

Also, by the same Author, 18mo. price 1s. half-bound,

Progressive Geography for Children.

"All books of geography (which I have met with) begin with the more abstruse and difficult, and postpone the more easy and technical parts of the study. This order I have reversed. I endeavour to impress upon the mind, in the first instance, those things which are the subject of every child's dream, and for which no reason need be, or can be assigned. There is no reason why the capital of England might not have been named Paris instead of London, or why Poland should not be called Italy, or the Danube the Volga. No reason can be given why a peninsula of the particular shape of Britain and Portugal should have been placed at the south-west of Europe, rather than at the south-east. The pen themselves, and the appropriation of them to places, are (in this view) purely accidental and arbitrary. It seems therefore proper to begin by charging the memory with these arbitrary distinctions and divisions, which require no reasoning, and which, if not learned by rote in early youth, are seldom thoroughly, and never without much difficulty, learned afterwards."—*Author's Preface*.

John Murray, Albemarle Street.

Price 6s.

A TREATISE on ATMOSPHERIC ELECTRICITY, including Observations on Lightning

Rods and Paragons.

8s., and 18mo. 5s. 6d. bound.

THE HISTORY OF THE LIFE AND VOYAGES OF CHRISTOPHER COLUMBUS.

By WASHINGTON IRVING.

"This is an excellent book, and we venture to anticipate that it will be an enduring one; neither do we hazard this prediction lightly, or without a full consciousness of all that it implies. We are perfectly aware that there are but few modern works that are likely to verify it, and that it probably could not be extended with safety to so many as one in a hundred even of those we praise. For we mean not merely that the book will be familiarly known and referred to some twenty or thirty years hence, and will pass in solid binding into every considerable collection, but that it will supersede all former works on the same subject, and never be itself superseded."—*Edinburgh Review*.

Printed for John Murray, Albemarle Street.

LECTURES ON SCULPTURE.

By JOHN FLAXMAN, Esq. R.A.

As delivered by him before the President and Members of the Royal Academy. With a brief Memoir of the Author.

"There is not one of these discourses which may not be read with pleasure as well as improvement by the ordinary class of readers, certainly by all who cherish a love for the fine arts, equally with the student in sculpture. The learning they contain qualifies them for the instruction of the last. The easy and popular manner in which that learning is conveyed, with references to examples, either generally familiar, or made known by illustrative plates, of which there are upwards of fifty at the end of the volume, renders the perusal of the lectures a facile, interesting, and pleasing study."—*Athenaeum*.

John Murray, Albemarle Street.

LONDON UNIVERSITY MAGAZINE.

On the 30th instant will be published, in post 8vo. 10s. 6d. boards,

SATAN A POEM.

By the Author of the "Omnipotence of the Deity." "Whence comest thou? From going to and fro in the earth, and from walking up and down in it."—*Jab. c. i. v. 7.*

London: Printed for S. Maunders, Newgate Street.

NATIONAL PORTRAIT GALLERY, No. IX.

The Number of this Publication (edited by W. JERDAN, Esq. F.R.S. &c.) for the 1st of January, 1830, will contain, in Memoirs of George III., the late Mr. Perceval, and Lord Keith, some curious original personal Anecdotes of the King, and an interesting Account of the Assassination of Mr. Perceval, by the Editor, who was an eye-witness of that atrocious act, and well acquainted with many particulars hitherto unpublished. A Plan of the Lobby of the House of Commons, the Minute of Belsham's Memorial taken from his Person, and an Engraving of the Pistol with which he committed the Murder, form illustrative parts of this Biographical Sketch.

The early Numbers of the National Portrait Gallery are being reprinted; and many Portraits of the highest order, as well as of perfect novelty, are in preparation.

London: Fisher, Son, and Co. 39, Newgate Street; Ackermann and Co. Strand; Colnaghi and Co. Pall Mall East.

Works nearly ready for publication, by Messrs. Colburn and Bentley, 9, New Burlington Street.

THE POETICAL WORKS of the Rev. GEORGE CROLY.

2. Darnley; a Novel. By the Author of "Richelieu, a Tale of the Court of France." 3 vols.

3. The Country Curate. By the Author of the "Subalterns." 2 vols. post 8vo.

4. The Adventures of an Irish Gentleman, written by Himself. 3 vols.

5. Random Records, by George Colman the Younger, dedicated, by gracious permission, to His Majesty. In 3 small vols. 8vo.

6. The Life of Major-General Sir T. Munro, Bart. K.C.B. late Governor of Madras, with Extracts from his Correspondence and Private Papers. By the Rev. Mr. Gleig, in 2 vols. 8vo.

7. Lawrie Todd; or, the Settlers in the Woods. By John Galt, Esq. Author of the "Ayrshire Legates." "Annals of the Parish," &c. &c. 3 vols.

8. Travels to Timbuctoo and other Parts of Central Africa, during the Years 1824, 1825, 1826, 1827, and 1828. By René Caillié. 8vo. 8vo. with a Map of the Route, a View of Timbuctoo, and other Plates representing the Buildings of the City.

9. The Reminiscences of Henry Angelo, Vol. II.

New Literary Periodical.

On Wednesday, the 5th of January, 1830, will appear, No. I. of THE FOREIGN LITERARY GAZETTE, and WEEKLY EPITOME of CONTINENTAL and DOMESTIC SCIENCE, LITERATURE, ARTS, &c. (In English).

To be continued on every succeeding Wednesday, price Eightpence for post, and one shilling for the bound volume. At a period when the minds of men throughout the civilised world are ardently turned to the cultivation of the sciences,—when education, and its concomitant, literature, are generally diffused,—and when discoveries and improvements are almost the every-day reward of the assiduous pursuit of things, it is not surprising that a multitude of organs should offer themselves to disseminate among the public the accessions to knowledge as they continually arise. The periodical press has, under these circumstances, become more than ever a powerful and a valuable medium for conveying that information which the enlightened and inquisitive spirit of the age demands; and it is not too much to say that, in its general character, it ably and satisfactorily supplies what is required. Many journals, and publications of every form and class, convey intelligence of every kind to their readers, from the common news of the day to the most elaborate researches into questions of great path and moment. Curiosity is gratified, food is furnished for the mind, the understanding is enlarged, and the whole social body is refined, by this rapid circulation of instruction; and it may be affirmed, that the glorious art of printing thus exercises an influence of incalculable benefit on the best interests of mankind, and far exceeding that of any former time.

To add another useful member to this circle, and supply a want which is still very obviously felt, are the objects of the "Foreign Literary Gazette." It cannot escape observation, that, however numerous and efficient are the works devoted to the progress of our own literature, science, and arts, there are but few which endeavour to direct attention to those of other countries. Imperfect and incidental notices are all that have, until very lately, been bestowed by English writers on the immense mass of intellect which pervades the Continent of Europe, and is now rapidly extending to the New World. We, in our insular position, hardly learn, and that tardily and at long intervals, what is continually achieving by the active mind of Germany, of Italy, of France, of Russia, of America, and of other nations; and, owing to this partial ignorance, we lose the advantage derived from a timely communion with the ideas and suggestions of contemporaries, who, in distant lands, are exploring the paths of learned, scientific, and philosophical inquiry,—paths in which an accidental hint or remark so often leads to the most important results that can add to the accumulation and happiness of the human race. The "Foreign Literary Gazette," therefore, purposes to condense within the compass of a weekly sheet, (the form of which renders it susceptible of great rapidity both in receiving and in diffusing,) whatever the skill, the learning, the industry, and the genius of individuals or communities abroad may bring to the aid of the welfare of mankind. In order to execute this responsible undertaking in an honourable manner, no preparatory pains, labour, and expense, have been spared. Connected with the most powerful Booksellers in London; having established, like the "Foreign Literary Gazette," a correspondence with contributors in all the principal countries of Europe, a correspondence with contributors to the highest attainments; being perfectly independent, and with ample means to command, as opportunities occur, still more extensive resources, the directors of this publication are confident of producing a work at once highly entertaining to the general reader, and replete with information to the mass of science and the scholar. In short, it will widely refine the literary and scientific pursuits of foreign countries, so systematically as to impart a distinct idea of their cultivation and progress, and so rapidly as often to precede their own periodicals.

The Contents will be chiefly Reviews of New Works, Translations of the leading Literary, &c. Societies, Voyages, Biography, Necrology, Antiquities, Natural History, Statistics, and Improvements in Mechanics, Commerce, Navigation, Manufactures, &c.

To be published in London by W. A. Scripps, 7, Wellington Street, Strand, and by Dulau and Co. Bohe Square, to whom Communications for the Editor may be sent.

Orders for the "Foreign Literary Gazette" are received by all Booksellers, Newsmen, &c.

On the 31st instant will be published, price 6s. small 8vo. with a handsome Vignette by Finden, the Second Volume of

DR. LARDNER'S CABINET CYCLOPEDIA; being the First Volume of the History of Maritime and Inland Discovery, in 3 vols.

The first volume of the Cabinet Cyclopædia recently published, is the first volume of the History of Scotland, in 2 vols. by Sir Walter Scott.

Printed for Longman, Rees, Orme, Brown, and Green, Paternoster Row; and J. Taylor, Upper Gower Street.

The most eminent Characters of the Age in every department of Literature, Science, and Art, are engaged in this work. For the names of Contributors, and other particulars, the Public are referred to the Prospectus, which may be had at all the Booksellers.

Gorton's New Topographical Dictionary. On the 1st of January, 1830, will be published, price 1s. Number 1. of

A NEW TOPOGRAPHICAL DICTIONARY of GREAT BRITAIN and IRELAND, containing every City, Town, Village, and Hamlet, in the Three Kingdoms, with Forty-Eight Quarto Maps, engraved on Steel by Sidney Hall.

By JOHN GORTON, Editor of the "General Biographical Dictionary," &c.

Plan of Publication. 1. Each Number of the Work will contain at least forty pages of letter-press, closely printed in octavo, double columns, with an entirely new type.

2. A quarto map will accompany each Number, drawn and engraved on steel expressly for this work, in the first style of execution, by Mr. Sidney Hall.

3. The whole work will be comprised in forty-two Numbers, one of which will be published regularly on the first of every month, except on the 1st of May or with the map accurately coloured, eighteen-pence; forming, when complete, two handsome volumes, in octavo.

London: Chapman and Hall, 9, Arundel Street, Strand; W. Kidd, 6, Old Bond Street; C. Tilt, 85, Fleet Street; and sold by all Booksellers and Newsmen in the United Kingdom.

On Monday next, price 2s. 6d. **CHARITY BAZAARS. A Poem.** "Lead me a fool's heart and a woman's eyes."—Shakespeare.

Early in January,

1. The Lost Heir; a Novel. In 3 vols.
2. Creation; a Poem. In small 8vo.
3. The Jew; a Novel. In 3 vols.

Now ready,

4. Bacon's Life of Francis the First. 2d edition, with Additions, 2 vols. 8vo. 2s.
5. The Romance of History, Second Series, 3 vols.

"Strong and vivid pictures of the past."—*Monthly Review*.
 "Valuable presents at this season."—*New Monthly Magazine*.
 "A vast store of romantic deed and wild adventure."—*Literary Gazette*.
 Printed for Edward Bull, New Public Subscription Library,
 20, Holles Street, Cavendish Square.

Under the Superintendence of the Society for the Diffusion
 of Useful Knowledge.

On Tuesday, Dec. 20, will be published, price 2s.

INSECT ARCHITECTURE. Part II.

The complete Volume, bound in cloth, will be published
 December 21, price 4s. 6d.

Early in January will be published,

The Pursuit of Knowledge, Part II. completing the Volume, which may also be had in cloth.
 London: Charles Knight, Pall Mall East.

First of January, 1830, Mr. Valpy will publish Vol. I. price
 4s. 6d. (to be continued in monthly Volumes,) of the

FAMILY CLASSICAL LIBRARY; or, English Translations of the most valuable Greek and Latin Classics.

"Cicero remarks, that not to know what has been transacted
 in former times is to continue to err as a child. If no use is made
 of the labours of past ages, the world must remain always in the
 infancy of knowledge."—*Johnson*.

London: Printed by A. J. Valpy, M.A. Red Lion Court, Fleet
 Street; and sold by all Booksellers in the United Kingdom.
 To those who are desirous of obtaining a knowledge of the most
 esteemed authors of Greece and Rome, but possess not the means
 or leisure for pursuing a regular course of study, the present un-
 dertaking must prove a valuable acquisition.

So diversified are the objects to which general education is at
 present directed, that to continue to know what has been transacted
 in former times is to continue to err as a child. If no use is made
 of the labours of past ages, the world must remain always in the
 infancy of knowledge."—*Johnson*.
 London: Printed by A. J. Valpy, M.A. Red Lion Court, Fleet
 Street; and sold by all Booksellers in the United Kingdom.
 To those who are desirous of obtaining a knowledge of the most
 esteemed authors of Greece and Rome, but possess not the means
 or leisure for pursuing a regular course of study, the present un-
 dertaking must prove a valuable acquisition.

So diversified are the objects to which general education is at
 present directed, that to continue to know what has been transacted
 in former times is to continue to err as a child. If no use is made
 of the labours of past ages, the world must remain always in the
 infancy of knowledge."—*Johnson*.

The selection is intended to include those authors whose works
 may with propriety be read by the youth of both sexes; and it
 will be obvious that the nature of the publication is of so perma-
 nent a character, as to prove equally interesting to posterity as to
 the present subscribers. The whole will be presented to the pub-
 lic in a cheap, elegant, and uniform style, forming a complete
 "Family Classical Library," alike useful for the purposes of
 instruction and amusement. Indeed, as Dr. Parr says, "if you
 desire your son, though no great scholar, to read and reflect, it is
 your duty to put into his hands the best translations of the best
 classical authors."

A biographical sketch will be prefixed to each author, and notes
 will be added, when necessary for the purpose of illustration.

The importance attached, in the present day, to translations of
 the classic authors may be estimated by the fact, that a series has
 been recently published in France, and that another in the Rus-
 sian language is now in progress, under the immediate sanction
 of the Imperial Government.

The excellence, as orators and historians, of Demosthenes, Ci-
 cero, Herodotus, and Xenophon, will place them foremost in the
 collection of prose authors: these will be followed by Thucydides,
 Livy, Sallust, Tacitus, &c. Homer, Virgil, and Horace, will
 justly take precedence among the poets.

Plan.

The size to be small 8vo. hot-pressed, and neatly covered in
 cloth. Price 4s. 6d. each volume, containing on the average 350
 pages of handsome letter-press.

The publication to be regularly continued and delivered every
 month with the *Magazine and Review*.

It is expected that the Series will make about forty monthly
 volumes; but any author may be purchased separately.
 Demosthenes and Sallust will be completed in Nov. I. and II.

Shortly will be published, the 2d edition, much improved and
 enlarged by an increase of more than One-Fourth of new Mat-
 ter, in 2 vols. 8vo.

DR. J. PYE SMITH'S SCRIPTURE
TESTIMONY to the MESSIAH; an Inquiry with a
View to a satisfactory Determination of the Doctrine taught in
the Holy Scriptures concerning the Person of Christ.

The 9th edition of

2. Foster's Essays on Decision of Charac-
 ter, &c.

A new edition of

3. Natural History of Enthusiasm, in Ten
 Sections. 8vo.
 Holdsworth and Ball, 18, St. Paul's Churchyard, London.

KING'S COLLEGE, LONDON. We

are authorised to state that the Publication advertised
 under the title of the "King's College Magazine," is in no way
 connected with King's College, London, and has received no sanc-
 tion whatever from the Council of that Institution.

INDEX.

On the great variety of our contents during the past year,
 and the accumulation of intelligence under heads hitherto
 less conspicuous among our arrangements, has rendered it
 necessary to extend our Index to this Volume.

REVIEW.
